LANDRETHS' SEEDS

DOES YOUR MERCHANT HANDLE LANDRETH SEEDS?

If he doesn't, then write to Landreths, as the United States rural delivery carries Landreths' Seeds to every man's door. United States Money Orders can be obtained at almost every Post Office. They cost—

From \$0.01 to \$2.50.....	costs 5 cents.	From \$20.01 to \$40.00.....	costs 15 cents.
" 2.51 " 5.00.....	" 7 "	" 40.01 " 60.00.....	" 18 "
" 5.01 " 10.00.....	" 10 "	" 60.01 " 80.00.....	" 20 "
" 10.01 " 20.00.....	" 13 "	" 80.01 " 100.00.....	" 22 "

Hints to Mail Order Purchasers

TERMS CASH WITH ORDER.—Seeds sent to amount of remittance only, as no accounts will be opened for small sums or balances resulting from short remittance. We guarantee to fill your order satisfactorily. In case of an error it will be cheerfully corrected.

REMITTANCE may be made in Cash, by Express or Registered Mail, by Draft on New York or Philadelphia, or by Postal Money Order. Sums of fifty cents or less, in cash or stamps, may be sent by ordinary Mail at our risk. United States postage stamps for any sum will be accepted where facilities for transmitting money by the above modes do not exist, but letters containing same should be registered, which costs ten cents.

BY MAIL—POSTAGE PAID BY US.—The prices for small seeds (Peas, Beans and Corn excepted) quoted in this Catalogue include postage, paid by us, either regular or by zone rates. We do not pay postage on Peas, Beans and Corn because of their weight. If wanted by Mail, postage should be added to price quoted, at the rate indicated below, estimating each quart at 2 pounds.

BY EXPRESS.—Moderate orders, too heavy or expensive for the Mails, or where quicker time than by freight is desirable, can be sent by Express to your nearest Express office. On small seed by Express we make a rebate equivalent to mail rate outlined below, which includes postage. This does not apply to orders for Peas, Beans and Corn. Charges in such cases are payable by the recipient. By special arrangement with all the Express lines in the United States and Canada, seeds and plants are now carried at a reduced rate of about 20 per cent. less than the merchandise rates when guaranteed by us. No goods sent C. O. D. without an advance sufficient to cover charges both ways. Onion Sets, Potatoes, Roots and other perishable goods will not be sent C. O. D., but will be sent only on receipt of full remittance and at risk of purchaser.

BY FREIGHT, R. R. or STEAMER.—Retail orders for heavy seeds, such as Peas, Beans, Corn, etc., can be shipped at lower rates of Freight by railroad or by steamer where practicable. All Freight and Express goods are delivered by us to the Freight or Express office in Bristol, Pa., charges payable at destination.

ORDER EARLY.—It is better to have the seeds on hand a month early rather than wait one day when you need them.

GUARANTEE.—We guarantee all shipments of seeds to reach the purchaser safely and in good condition.

MAKING OUT ORDERS.—We always make it a point to give orders our **immediate attention** as soon as received, a fact well known and appreciated by the thousands of customers deriving their supplies from us direct. The prompt execution of orders will be greatly facilitated if our customers will be careful to write on their order their **Full Name and Address**, the **Quantity**, **Name of Variety** and **Price** of the seeds wanted (See Order Sheet enclosed).

Orders with full address of customer should be written on a distinct sheet, apart from any necessary **inquiries**, which latter should be written on a **separate sheet**, to insure speed in filling orders in our packing department.

INQUIRIES as to methods of culture from correspondents who are not customers will receive attention only upon enclosure of 25c. in stamps accompanying same, which sum may be deducted when remitting us a subsequent cash order for Seeds amounting to One Dollar or more.

The practice of writing us from several post-offices is to be avoided. Change of residence should be communicated to us at once, to secure delivery of our current publications. If you want a Catalogue sent to your neighbors or friends, send us their addresses and we will put them on our Mailing List.

Space will not permit us to enumerate all the seeds and garden requisites we carry in stock. If you do not see **what you want, write us** and we will promptly give you prices and all other information.

Such an establishment must be dependable
Our experience is at your disposal

DESCRIPTION OF THE STEAMBOATS

On Cover Page of Landreths' Catalogue

The one with the oars pictured is of the first Steamboat used in the world—used in 1790 and propelled by six oars on a side. Mr. Fitch the inventor lived near Bristol, Pennsylvania, and transported passengers from Bristol to Philadelphia.

Ten years after the Steamboat inventor Fitch, came Mr. Fulton, who invented a Steamboat with a paddle wheel on each side, which transported passengers from Bristol to Philadelphia.

The various Firm Titles since the organization of the Landreth business have been as follows:

DAVID LANDRETH, 1784.
DAVID & CUTHBERT LANDRETH, 1790.
DAVID LANDRETH & Co., 1830.
DAVID LANDRETH & D. LANDRETH MUNNS, 1843.

DAVID LANDRETH, 1845.
DAVID LANDRETH & SON, 1860.
DAVID LANDRETH & SONS, 1875.
D. LANDRETH SEED COMPANY, 1903.

Three Old Advertisements

ADVERTISEMENT

From Dunlop & Claypoole's American Daily Advertiser, Philadelphia, March 6, 1795

GARDEN SEEDS

1795 "A fresh and general assortment, such as has not been introduced into this part of the country before. A choice collection of Pease, Beans, Cabbage, Cauliflowers, &c., &c.

"For sale by the subscriber, south side of the Courthouse, Market Street, Philadelphia.

"DAVID LANDRETH."

ANOTHER EARLY ADVERTISEMENT, *From Relf's Philadelphia Gazette, March 7, 1808.*

GARDENING

1808 "David & Cuthbert Landreth, Seed and Nurferymen, beg leave to inform the public that they continue to carry on their business as heretofore at their Seed Shop in Market St., near 12th, also at their Nurfery, Federal St., near the Arsenal, and in the Market, S. E. Corner of the Old Court House, every forenoon, Sunday excepted, where they have constantly for sale a general assortment of Garden and Flower Seeds, which they warrant to be fresh and genuine in their kinds, also a large selection of the choicest kinds of Fruit Trees, a large collection of Forest Trees, Evergreens, and Flowering Shrubs, Bulbous Roots, &c., &c. Also a large and curious collection of Green House Plants. They have now on hand a large quantity of Thorns in fine condition for planting out in Hedges and intend keeping a large supply for the future, where such Gentlemen and Farmers as are desirous of adopting the useful improvement of Hedges may be supplied at a reasonable rate."

The Landreths were the first to establish a Seed House in the Southern States, initiating that enterprise in 1819, in the Autumn of which year David Landreth, Jr., established a branch store in the City of Charleston, S. C.

We here give a copy of a newspaper advertisement of 1821, the earlier ones having been lost.

ADVERTISEMENT, *Charleston Courier, Charleston, S. C., November 9, 1821.*

GARDEN SEEDS

"The growth of 1821 for sale at No. 228 King street, in the Bends.

"The subscriber respectfully informs the public that he has just arrived from Philadelphia with a large and general assortment of Garden Seeds.

1821 "The growth of the last Summer from the Gardens and Nurseries of David and Cuthbert Landreth, which he warrants FRESH AND GENUINE.

"All orders directed to him will meet with immediate attention, and from the known quality of the stock he is certain giving satisfaction.

"THOMAS LANDRETH, *Agent for D. & C. Landreth.*

"N. B.—For sale at D. & C. Landreth's Nurseries, Philadelphia, a general assortment of the choicest kind of Fruit Trees, together with the greatest variety of Green House Plants, Evergreen and Ornamental Trees and Flowering Shrubs in the United States.

"Orders left with Thomas Landreth for trees or shrubs will be furnished at Philadelphia prices."

The Charleston Store was maintained from 1819 till 1861, when it was confiscated by the Confederate Court. The Landreths were the first Seed Merchants in the Cotton States.

THE LANDRETH MANSION OF THE LANDRETH SEED FARM 1788.
The First Seed Farm in America.

The Celebrated Trial Grounds from 1788 to 1847 were conducted within a few hundred yards of this spot, when they were removed to Bristol, Penna. This spot is now 22nd and Federal Streets, Philadelphia, where there has been erected a Model David Landreth Public School.

Trial Grounds for Vegetables, Ornamental Flowers, Shrubs and Trees, conducted here for sixty-three years, were within a few hundred yards back of this spot. For fifty years this was one of the show places of Philadelphia by reason of its Horticultural Establishments till 1847.

Front view of the David Landreth Mansion erected long before the Revolutionary War. Used as a Public School from 1847 until it burned down 1864.
A most extensive Trial Ground was in the rear.

On this site is a modern and most expensive Landreth Public School.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Pea Picking Room, Bristol, Penna.—Accommodation for fifty girls. Three other Picking Rooms of 50 chairs each in Montana, Idaho and Michigan.

This shows a method of hand picking Beans, Corn and other Seeds, the Seed being picked is fed down from an upper story through pipes and discharged on small tables, each with an endless belt. When defective grains are taken out the clean Seed is discharged from each table and bagged on the floor beneath.

For vitality of Germinative power the Landreths make fifty thousand tests annually under glass. Tests are made in two Green Houses to observe how many Seeds out of a hundred will vegetate. These tests are for Germinative power, the other tests in the open fields are for quality. Other Seedsmen do not inform themselves so much of the character of the Seeds they sell.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

One acre view of the Pea Trial Grounds at Bloomsdale 1925. These Pea Trials are very interesting, because they differ much—These Trial Grounds put us wise.
The Pea Trials are very interesting because so many tests differ.

One acre view of the Trial of Bush or Dwarf Beans on the Trial Grounds at Bloomsdale 1925. These tests, as the test of every other crop, prove that many samples are improperly named, while they prove that some others are too bad to be given Garden room.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

View of the Trial Grounds at Bloomsdale 1925. Two rows under each label, one row for pulling up when in marketable condition, the other row standing undisturbed till frost.
This picture taken of the Trial Grounds indicates the intense care which the Landreths take in studying their business. They know what they sell and also know what others sell.

One acre of Tomato tests. One row samples of all promoted varieties. Many under distinctive names are simply duplicates. The largest competitive Trial of Tomatoes in the United States. Visited by many Tomato experts.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Kale, all sorts from various sources.

Cauliflower Trials. Early, Medium and Late from various Seed Merchants, some very poor, others excellent. A very large and exhaustive Trial. Very instructive.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

POLE BEAN TRIALS.—For years we have tested the comparative qualities of running or pole Beans. All the sub varieties of Limas and all the sub varieties of climbing Round Pods. The posts to which we attach wires to train the vines show the substantiality of the test. Each row is 600 feet long. Each variety twenty feet in the row and there are three rows.

A LARGE CORN CRIB.

BEST FLOWER SEEDS

LANDRETHS'—Good as any, better than some

NAMES BOTH BOTANICAL AND COMMON

In presenting our Flower Seed list we have given the matter a deal of thought, endeavoring to list a first-class selection of Flower Seeds. The varieties enumerated are what we consider the best of their families, as to hardiness, color and general satisfaction. We have not listed any varieties which will not thrive in an open garden. All varieties listed, if given the proper care, should produce satisfactory results, and although our list is not as large as found in other catalogs, we think it comprises the best varieties for general purposes.

AGERATUM

Per Pkt.

Of easy growth, flowers abundantly out-of-doors in Summer and showy until frost; therefore very desirable for bouquet-making. A bed with the centre of *Salvia splendens* and border about 18 inches wide of blue *Ageratum* will make a dazzling sight for 90 days. Any one can grow it. Effect showy.

Mexicanum, White—Very delicate $\frac{1}{4}$ Oz., 30c.; 10
Mexicanum, Blue—Most attractive $\frac{1}{4}$ Oz., 30c.; 10
Mixed—White and Blue..... $\frac{1}{4}$ Oz., 30c.; 10

ALYSSUM, SWEET

Makes a very pretty border; fine for carpet bedding, baskets, pot plants and in making small bouquets. Cut back when through flowering and will bloom again. Annual. Blooms for 60 days.

Maritimum (Sweet).—White. 8 to 12 inches. Trailing habit, very sweetly scented, a hardy annual.

$\frac{1}{4}$ Lb., 1.50; 2 Oz., 85c.; 1 Oz., 45c.; $\frac{1}{2}$ Oz., 25c.; 10

Little Gem or Carpet of Snow.—Very suitable for border and pot work. 6 inches.

1 Oz., 60c.; $\frac{1}{2}$ Oz., 35c.; $\frac{1}{4}$ Oz., 25c.; 10

ANTIRRHINUM (Snapdragon)

An exquisite showy hardy perennial, that is living for a second and third year, blooming in July if sown early and then on till killed by frost. Among the most showy and brilliant border plants; succeeds in any good garden soil. By cutting off most of the flowering stems and giving a slight protection over Winter, plants will bloom second Summer for four months. Try a few this way. For cut flowers with stems kept in water, Snapdragons retain their fresh appearance for ten days, and in this particular they are very valuable as table decorations. Easy to grow as a radish.

Tall Rose..... $\frac{1}{4}$ Oz., 50c.; 10
 " **Yellow**..... $\frac{1}{4}$ Oz., 50c.; 10
 " **Scarlet**..... $\frac{1}{4}$ Oz., 50c.; 10
 " **White**..... $\frac{1}{4}$ Oz., 50c.; 10
 " **Pink**..... $\frac{1}{4}$ Oz., 50c.; 10

Tall, Large Flowered, Mixed. Height, 18 inches. Red, Rose, Yellow, Scarlet..... $\frac{1}{4}$ Oz., 30c.; 10

Galathee—Crimson and white. Showy.

$\frac{1}{4}$ Oz., 50c.; 10

Semi-Dwarf, Large Flowered, Mixed. Rose. Yellow, White..... $\frac{1}{4}$ Oz., 40c.; 10

Snapdragon or Antirrhinum

ASTERS

Chrysanthemum-like flowers not surpassed in beauty by any plant. They vary in color from a delicate pink and white to deep reds and purples. The plants thrive best in rich soil, but with sufficient moisture will give satisfaction in almost any garden plot, and blossom in profusion for 90 days or till killed by frost. They are especially adapted to house decoration, and when cut and placed in water hold their regal heads erect from one to two weeks without withering. A supply of Asters, effective and beautiful for months, providing more cut flowers than any other plants

ASTERS—Continued

Per Pkt.

occupying the same space, may be had from July till frost by planting an early variety, as Queen of the Market, followed by a later variety of the American Branching type. Try Landreth's Asters this year and see how unusually fine they are. Good as any offered under more florid descriptions. 8 to 20 inches high. Asters are by far the most satisfactory open garden flowering plants during Midsummer and Autumn.

American Branching Asters

We cannot recommend the Branching too highly. They closely resemble small Chrysanthemums. The best Asters for cutting. White, lavender, pink, crimson, purple. Very free blooming, producing handsome flowers of the broad-petaled type, slightly incurved and very lasting.

Flowers large and double. Handsome double flowers borne on long stems, a free brancher and unsurpassed in merit. Autumn Sorts Unsurpassed. Thirty inches tall.

Crimson —Fringed with Carmine.....	$\frac{1}{8}$ Oz., 30c.; 10
Lavender —Very large, showy.....	$\frac{1}{8}$ Oz., 30c.; 10
Pink —Delicate rose, attractive.....	$\frac{1}{8}$ Oz., 30c.; 10
Purple —Blue Purple.....	$\frac{1}{8}$ Oz., 30c.; 10
White —Exceedingly delicate.....	$\frac{1}{8}$ Oz., 30c.; 10
Light Blue	$\frac{1}{8}$ Oz., 30c.; 10
Fine Mixed	$\frac{1}{8}$ Oz., 30c.; 10

Crego's Giants.—Very early and constant bloomers, after the style of Queen of Market, but larger flowered. Loose-petaled, fluffy flowers.

Mixed Colors..... $\frac{1}{8}$ Oz., 30c.; 10

Mixed Asters— $\frac{1}{8}$ Size

Per Pkt.

Giant Comet.—Immense flowers, often 6 inches diameter; good form and growth. White, dark blue, light blue, crimson, sulphur-yellow, rose. Very valuable for exhibition vases as resembling Japanese Chrysanthemums. Graceful and mop-like heads, grand sort. Mid-summer. Branching.

Blue	$\frac{1}{8}$ Oz., 30c.; 10
Crimson	$\frac{1}{8}$ Oz., 30c.; 10
Pink	$\frac{1}{8}$ Oz., 30c.; 10
Purple	$\frac{1}{8}$ Oz., 30c.; 10
Rose	$\frac{1}{8}$ Oz., 30c.; 10
White	$\frac{1}{8}$ Oz., 30c.; 10
Finest Mixed	$\frac{1}{8}$ Oz., 30c.; 10

Ostrich Feather.—Large showy flowers; branching with loosely curled flowerets. White, rose, light blue, dark blue, crimson. Fine for cutting. Very similar to Giant Comet.

Mixed..... $\frac{1}{8}$ Oz., 30c.; 10

Queen of the Market.—The best earliest among the Asters. Scarlet, rose, dark blue, lavender. Very desirable. Habit spreading. Plants, 18 inches high and very productive. Ten days earlier than any other.

Crimson .—Very attractive.....	$\frac{1}{8}$ Oz., 30c.; 10
White .—Like snow.....	$\frac{1}{8}$ Oz., 30c.; 10
Lavender .—General favorite.....	$\frac{1}{8}$ Oz., 30c.; 10
Light Blue .—Very choice.....	$\frac{1}{8}$ Oz., 30c.; 10
Rose .—Most delicate.....	$\frac{1}{8}$ Oz., 30c.; 10
Fine Mixed .—All colors.....	$\frac{1}{8}$ Oz., 30c.; 10

AQUILEGIA (Columbine)

Among the most beautiful and curiously formed of hardy old fashioned flowers. Blooms in the early Spring and Summer for 60 days. Foliage similar to a three leaf clover.

Double Mixed .—Curious.....	$\frac{1}{2}$ Oz., 50c.; 10
Single Mixed	$\frac{1}{2}$ Oz., 50c.; 10

BACHELOR'S BUTTON

See Gomphrena, page 17.

BALLOON VINE (Cardiospermum)

The **Balloon Vine**, popular as a rapid climber, 8 feet, producing inflated seed pods one inch diameter; delicate foliage. 90 days. Always a favorite. Valuable for screens.... $\frac{1}{2}$ Oz., 25c.; 10

BALSAM APPLE

See Gourds, page 17.

BALSAM (Ladyslipper)

Large flowered, full centered. Beautiful annuals with flowers as double as Roses, measuring two inches in diameter. Rich soil and deep culture are requisite to produce large and showy flowers. Seeds may be sown where they are to stand, and later thin out the plants; but if started indoors

Balsam or Ladyslipper

Per Pkt.

they will flower earlier. Set plants about 2 feet apart, where they can have plenty of sun. Our stock is exceptionally fine. In bloom 60 days.

Double or Camellia Flowered.—Spotted Flowers $\frac{1}{4}$ Oz., 20c.; 10

Rose Double Flowered.—Mixed colors. 2 feet high, 18 in. diameter..... $\frac{1}{4}$ Oz., 30c.; 10

BRACHYCOME

Iberidfolia—Swan River, Daisy..... $\frac{1}{4}$ oz., 40c.; 10

CALENDULA or POT MARIGOLD.—See page 18.

CAMPANULA or CANTERBURY BELLS

The **Canterbury Bells** are a large genus of showy plants, blooming in profusion, mostly perennials. The Campanula medium claims a situation in most gardens. Easy of culture and certain to flower; all succeed well in good soil. Blooms second year.

Double Mixed..... $\frac{1}{4}$ Oz., 50c.; 10
Single Mixed..... $\frac{1}{4}$ Oz., 20c.; 10

CANDYTUFT (Iberis)

These well-known favorites are among the most beautiful of our annual flowers. The seeds can be sown at all seasons or in Fall for early flowering. They like rich soil and plenty of room to flower freely. Nearly all varieties are hardy annuals. Very pretty in beds or masses. Bloom 60 days.

Empress or Giant White Rocket.—Hyacinth flowered. A superb variety; large, pure white flowers on good stems..... $\frac{1}{4}$ Oz., 25c.; 10

	Per Pkt.
White Extra Select.....	$\frac{1}{4}$ Oz., 20c.; 10
Giant Hyacinth Flowered.....	$\frac{1}{4}$ Oz., 20c.; 10
Umbellata.—Crimson.....	$\frac{1}{4}$ Oz., 20c.; 10
“ Lilac.....	$\frac{1}{4}$ Oz., 20c.; 10
“ Pink.....	$\frac{1}{4}$ Oz., 20c.; 10
“ Mixed Colors.....	$\frac{1}{4}$ Oz., 20c.; 10

CANNAS

Tropical, half-hardy perennial plants with broad foliage, somewhat resembling corn; produce a striking effect grouped in beds or single on the lawn. Soak the seed in warm water about 12 hours, sow in hot-bed, transplant when ground is warm; give plenty of moisture and rich soil. Take up the roots before frost and keep in a moderately warm cellar.

Crozy's Early Newest Large Flowering.—Mixed colors. 4 to 5 feet tall..... Oz., 30c.; 10

CARNATIONS

See **Dianthus**, page 15.

CASTOR BEAN or RICINUS

The **Castor Bean**, in all its varieties, has a showy tropical appearance, singly or in groups. Valuable for screens.

Sanguineus.—Red stalks and foliage, with bronze tinge, seed-pods scarlet. 10 feet..... Oz., 25c.; 10

Zanzibariensis.—Largest-leaved variety, an elegant centre plant. Leaves often 2 feet across. 12 feet high..... Oz., 25c.; 10

Mixed, All Varieties..... Oz., 25c.; 10

CANTERBURY BELLS

See **Campanula**

Canterbury Bells or Campanula

CELOSIA or COCKSCOMBS

The **Cockscombs** are tender annuals, requiring good soil. The Cockscomb form will produce a larger comb by cutting off side flowers and leaving one head only to a plant. If cut before they fade, the head may be preserved during the

Winter. 12 inches across. In flower for 90 days.
Cristata, Tall.—Scarlet..... $\frac{1}{4}$ Oz., 40c.; 10
Golden Queen..... $\frac{1}{4}$ Oz., 50c.; 10
Tall Giant Empress.—Bright crimson combs, dark foliage. 2 to 3 feet high..... $\frac{1}{4}$ Oz., 40c.; 10
Cristata, Dwarf.—Mixed. 4 or 5 colors. 1 foot high. Combs 10 inches..... $\frac{1}{4}$ Oz., 40c.; 10
Thomsoni Magnifica Plumosa.—Scarlet and golden mixed. Plants 3 to 4 feet high, sending up delicate and exquisitely beautiful plumes of 10 inches in length, 3 to 4 inches in diameter and far more delicate than the more formal Cockscomb..... $\frac{1}{4}$ Oz., 50c.; 10
Childsii Crimson (Wool Flower)..... $\frac{1}{4}$ Oz., 75c.; 10

CENTAUREA (Corn Flower)

Cyanus, Double White..... $\frac{1}{8}$ Oz., 15c.; 10
 " **Double Blue**..... $\frac{1}{8}$ Oz., 15c.; 10
 " **Double Rose**..... $\frac{1}{8}$ Oz., 15c.; 10
Coronarium.—Tall Double finest mixed..... $\frac{1}{8}$ Oz., 15c.; 10

CHRYSANTHEMUM

Single Mixed Annual..... $\frac{1}{2}$ Oz., 40c.; 10
Double Mixed Annual..... $\frac{1}{2}$ Oz., 30c.; 10

Centaurea

Per Pkt.

Per Pkt.

CLEOME (Spider Plant)

Found in all old-fashioned gardens. Flowers rose, like a many legged spider, borne on stems, four feet high..... $\frac{1}{4}$ Oz., 25c.; 10

COLUMBINE

See *Aquilegia*, page 12.

CONVOLVULUS

See page 19.

COKEOPSIS (Calliopsis)

Golden Wave..... $\frac{1}{4}$ Oz., 25c.; 10
Crimson King..... $\frac{1}{4}$ Oz., 25c.; 10
Double Mixed.—Showy, hardy, fine for cutting..... $\frac{1}{4}$ Oz., 15c.; 10

COSMOS

Cosmos—Blooming not only in midsummer but during the late Autumn when all other flowers have ceased

Every year this flower makes more friends. Both flowers and lace-like foliage are fine for cutting. Growing 4 to 8 feet high from seed. In flower for 50 to 70 days. See illustration. Valuable for screens. Blooms until killed by frost.

Early Flowering Crimson..... $\frac{1}{4}$ Oz., 25c.; 10
Early Flowering Pink..... $\frac{1}{4}$ Oz., 30c.; 10
Early Flowering White..... $\frac{1}{4}$ Oz., 30c.; 10
Early Flowering Mixed.—White ground, flushed with delicate pink; a decided acquisition to this class..... $\frac{1}{2}$ Oz., 25c.; $\frac{1}{4}$ Oz., 20c.; 10

Mammoth Perfection, Mixed.—Flowers of perfect form, great size and beauty. Mixed in same packet. White, crimson, dark pink, white tinted rose..... $\frac{1}{4}$ Oz., 35c.; $\frac{1}{2}$ Oz., 20c.; 10

CYPRESS VINE

See **Morning Glories**, page 19.

DAHLIA

A favorite for autumn flowering, blooming the first season from seed if started early. The flowers are so symmetrical and perfect and the range of colors so wide and varied that they will always be popular where display is wanted.

Many tubers so choice that they sell for one dollar, sometimes ten and twenty dollars.

Finest Double Mixed.—Seeds saved from double flowers, including shades of red, pink, dark maroon, yellow, white, etc..... $\frac{1}{4}$ Oz., 50c.; 10

Finest Single Mixed Dahlia.—Will produce brilliant flowers running through a wide range of striking colors..... $\frac{1}{4}$ Oz., 30c.; 10

DIANTHUS

Dianthus

The Dianthus may be divided into two classes, 1st, Carnations, which are striped or ribboned outwards. 2d, Picotees which are edged or feathered inwards, generally smaller and hardier and of a greater range of colors. These old favorites are still as popular as ever. Rich soil will make bright flowers. Most of the varieties are fragrant. In the open garden some bloom the first Autumn; all bloom the second season.

Perpetual Flowering Dianthus or Carnations

Giant Marguerite, White..... $\frac{1}{4}$ Oz., 40c.; 20

Giant Marguerite, Mixed Extra Large.—A very vigorous class, suitable for garden and splendid for cutting. Sown as annuals in February on a gentle heat and transplanted to open ground as soon as possible after frost will produce a pro-

ICE PLANT (Mesembryanthemum) 10

A plant with ornamental foliage, ice like globules, valuable for dry and sunny banks, rockwork, old walls, etc.

IPOMŒA (Morning-glories)

See page 19.

JOHNNY-JUMP-UP

Per Pkt.

See **Pansies**, page 21.

KOCHIA (Fire Bush)

SUMMER CYPRESS

The seed should be sown when the Oak trees are bursting into leaf. The plants develop very rapidly, finally reaching by midsummer two feet in height, and forming perfect globes of green, feathery branches, which later burst into a mass of small brightest scarlet flowers; the whole effect being that of a globe of fire, a veritable burning bush. Anyone can grow this plant in almost any situation, and we accordingly recommend it most highly.

Tricophylla.—A red stemmed and red flowered (in the autumn) bush, two feet high—early.

$\frac{1}{4}$ Oz., 20c.; 10

Childsii.—Extraordinarily showy; green bud after frost..... $\frac{1}{4}$ Oz., 20c.; 10

Dwarf Brownie, or Legion of Honor.—About 9 inches high. Fine for borders or massing. Flowers single, brilliant gold with maroon blotching. In bloom till frost..... $\frac{1}{4}$ Oz., 25c.; 10

Prince of Orange or Calendula Mixed.—Orange King, Lemon Queen, each, or Mixed $\frac{1}{2}$ Oz., 20c.; 10

Mignonette. An old-fashioned flower, a great favorite

MARVEL-OF-PERU

Per Pkt.

Or, as it is generally called, **Four-o'clock**, because its flowers open late each afternoon; bright foliage. Flowers are fragrant, with desirable

Morning-glory

Per Pkt.

colors and fine markings. Makes a fine Summer hedge if set in rows a foot apart.

Mixed colors of flowers. $\frac{1}{4}$ Lb., 60c.; Oz., 20c.; 10

MIGNONETTE (Reseda)

No annual is a more general favorite than the Mignonette. Its modest, sweet-scented flowers recommend it to everyone. No garden is complete without the Mignonette. One of the easiest culture, it adapts itself to all situations. Finds a place in the greenhouse or conservatory, in a box or pot on the window, or in the open ground in Summer. Blooms till Fall. Sow seeds several times during season. In bloom for 60 days.

Allen's Defiance.—The florist's favorite. Large spikes 13 or 14 inches long, very fragrant, and will keep for weeks after cutting, holding their fragrance, as the buds open daily. Fine for forcing, good keeper. 9 inches high. $\frac{1}{4}$ Oz., 25c.; 10

Goliath, Giant Flowered.—Red. Plants pyramidal in form and very strong with exceedingly large flower-spikes. 12 inches. One of the best. $\frac{1}{4}$ Oz., 30c.; 10

Golden Yellow.—Dwarf growth, highly colored; fragrant. $\frac{1}{4}$ Oz., 30c.; 10

New York Market.—Florist strain. Oz., 40c.; 10

Odorata.—Small flowered but particularly fragrant. 9 inches. Oz., 25c.; 10

MORNING-GLORY

Large-Flowering Varieties

Convolvulus.—The **Convolvulus Major** is an annual of rapid growth; large flowers of many colors; suitable for porches or arbors, blooming in July and constantly till frost.

$\frac{1}{4}$ Lb., 40c.; Oz., 20c.; 10

Rochester.—A new large-flowering variety. Flowers 4 inches or over, are of a deep violet-blue, with a narrow band of white around the edge. Wonderfully attractive. $\frac{1}{4}$ Oz., 30c.; 10

Imperial Japanese Mixed. Oz., 30c.; 10

Heavenly Blue.—Most exquisite of the Morning-glories. Charming color. $\frac{1}{4}$ Oz., 30c.; 10

Cypress Vines (Ipomœa)

The Ipomœas are among the most beautiful of annual running vines, blooming for 90 days or from midsummer till frost.

Quamoclit.—Crimson, small, dark. Fern- or lace-like foliage; climbing rapidly 8 feet. $\frac{1}{4}$ Oz., 30c.; 10

Quamoclit alba.—White, small. 10 feet. Lace-like foliage; climbing 8 feet. $\frac{1}{4}$ Oz., 30c.; 10

Quamoclit Mixed.—White and crimson. Lace-like foliage; climbing 8 feet. $\frac{1}{4}$ Oz., 25c.; 10

MOONFLOWER

These beautiful rapid-growing climbers will grow about 30 feet in one season. Exceedingly showy. Leaves are large and the flowers, which open as the sun is sinking in the west, are very fragrant. The seeds being hard, some advise filing the end of each seed, but we have found it best to plant the seeds one-half inch deep after having soaked them overnight in warm water. Blooming 40 days.

Mexicana Grandiflora Alba.—White flowers, six inches wide. Opens only night and mornings. Large, smooth, dark foliage. Similar to large flowering and large-leaved Morning-glories.

$\frac{1}{2}$ Oz., 35c.; 10

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Per Pkt.

Bona nox (Evening Glory).—Large fragrant blue flowers opening in the evening. Very showy. $\frac{1}{2}$ Oz., 30c.; 10

Grandiflora.—Moon-flower pink. Not so strong as the large common *Convolvulus*. 12 feet. $\frac{1}{2}$ Oz., 35c.; $\frac{1}{4}$ Oz., 25c.; 10

Nasturtium

Landreth's Nasturtiums

Sow in nursery bed when the Apple is in bloom.
Transplant when two inches high.

(PRICE PER PACKET, 10 CENTS)

Did you have them last Summer? If not, why not? The Nasturtium, with four or five other ornamental plants, leads everything else in the garden. They surpass the Geranium in brilliancy. Landreth's Nasturtiums for 1926 were a great success, but we feel confident that they will be even

more satisfactory, as our stock for 1927 contains some new varieties. These flowers require next to no care and thrive best in rather poor soil, enduring heat and dry weather remarkably well. No flower is as desirable for table decoration. Every housewife prizes the seed pods on account of their pungent, peppery taste, and feels her pickles incomplete without them. The flowers are of all colors, from deep chocolate to nearly white, and blossom in greatest profusion until killed by frost. They are very effective when planted in borders, also well suited for vases and baskets. Do not let a Summer pass without having a bed of these refreshing flowers. You cannot but love them if you know them. No more trouble to grow Nasturtiums than to grow Lettuce or Peas or Beans. They bloom from early summer until killed by frost. An excellent salad.

One Ounce sows 30 feet of single row.

DWARF NASTURTIIUMS

The Dwarf Sorts are adapted for beds and borders

8 to 15 inches.

NAMED SORTS, 10 CENTS EACH;

OUNCE, 20c.; $\frac{1}{4}$ -POUND, 45c.; POUND, \$1.50

Crimson.—Showy variety, equal to any in startling effect.

Golden King Dwarf.—Flowers Golden and Yellow, dark leaved.

Empress of India.—Foliage purple-blue, bearing brilliant deep scarlet flowers; a good plant for edging.

Beauty Dwarf.—Flowers Yellow and Scarlet.

King Theodore.—Dark crimson. Foliage dark green. An excellent sort. Good for edging.

Pearl or Moon Light.—Flowers lemon tint, a choice color among Nasturtiums, producing pleasing effect.

Yellow.—Strong vine, large leaved, profuse bloomer.

Landreth's Mixed Dwarf Sorts.—A mixture of the best dwarf sorts, producing when in bloom an agreeable effect; in colors of scarlet, crimson, bronze, gold and white.

Per pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.; lb., \$1.25

TALL NASTURTIIUMS

Climbing 4 to 5 feet high.

NAMED SORTS, 10 CENTS EACH;

OUNCE, 20c.; $\frac{1}{4}$ -POUND, 45c.; POUND, \$1.50

Crimson.—Dark and showy.

Bright Rose.—Very choice sort, producing a rose-colored flower; quite distinct from usual colors.

Bright Yellow.—Very showy, and a profuse bloomer.

Chameleon.—All colors on same plant and a great variety of splashes of color on same flower.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Per Pkt.

TALL NASTURTIUMS—Continued

Dunnett's Orange or Sun Light.—A very vigorous grower, producing a showy, deep orange flower.

King Theodore.—Very dark. One of the most attractive on our trial grounds this year.

Pearl or Moon Light.—Delicate, cream-colored flowers, contrasting finely with the orange, gold and scarlet of more brilliant varieties.

Prince Henry.—Primrose-colored, foliage light color, spotted with crimson. A choice sort.

Spit Fire.—Remarkable in its intensity of sparkling brilliancy; exceedingly showy; one of the finest sorts.

Vesuvius.—Colors, Salmon and Rose, dark leaved.

Landreth's Mixed Tall Sorts.—A combination of many tall varieties; colors, white, cardinal, orange, rose, scarlet, etc.

Per pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.; lb., \$1.25.

Pansies

JOHNNY JUMP UP

"Pansies for thought!" Have you ever thought how marvelously beautiful they are? Have you thought that no garden is complete without them? Have you thought Landreth's Pansies

Pansies—Often the flowers are twice as broad as shown in this picture. Often the size of a silver dollar.

Per Pkt.

the finest in the world? If not, try them this year and you will find them unsurpassed and of unusual size. 6 inches high, plants 8 inches diameter.

Seeds should be sown out of doors very early in the Spring or during August and the plants protected during Winter. The happy faces of these flowers cannot but brighten every home. They are in bloom sixty days after planting and continue to bloom till after frost.

Landreth's Sweet Peas

Sow in permanent location as soon as possible in the Spring, in single row, two seeds to the inch, half-ounce of seeds to every yard of row; cover one inch deep.

Sweet Peas can be grown as easily as the common garden Peas, simply requiring room and *early starting*—planted even before the frost is out or the ground. An early start is all important, disappointment is certain to follow a late start. Best results are obtained by sowing the preceding Autumn, as with deep roots in a deep, rich soil the season of blooming is lengthened. They do best when trained to trestles made of string of wire. They should be thinned out about one inch apart in rows, and if in parallel rows the rows should be four (4) feet apart.

Sweet Peas have a blooming period of about four weeks, consequently to provide for a longer season of flowering it is advisable, where garden space permits, to make four or five sowings about one

week apart, making the first sowing before the frost is out of the ground. But the blooming season is only partially fixed according to date of sowing, for Nature is disposed to run flowering time much together, whatever may have been the date of sowing the seeds.

Sweet Peas always develop the largest and best flowers and continue longest in bloom under conditions of a rainy season or under irrigation. On the other hand, hot, dry weather diminishes the size of flowers, causes them to fade and induces the vines to cease blooming, to soon dry up if not revived by rain, but after a good rain will make a display as attractive as at first.

White-seeded Sweet Peas are more delicate than the dark-seeded varieties, and under unfavorable conditions of soil and rainfall or drought do not germinate as freely as dark-seeded, which are always hardy.

Sweet Peas of any variety will generally bloom in 60 or 70 days after they germinate; one ounce being sown to ten feet of row.

Sweet Peas.

Sweet Peas

GRANDIFLORA TYPES—Choice

Mixed Colors—Sow Early

If a mixture of colors is desired we offer three grades:

	Oz.	$\frac{1}{4}$ lb.	Lb.

Distinct Sorts

GRANDIFLORA SWEET PEAS

Formerly we named them in classes of colors or marking—this year we name them alphabetically—sixteen sorts—we might name one hundred more, but these are sufficient. Named sorts 10c. pkt.

Per oz.	Per $\frac{1}{4}$ lb.
20c.	50c.

Named Varieties

- America**—Crimson scarlet, striped with white.
- Black Knight**—Almost black, its name fits it.
- Captain of the Blues**—Standard almost clear purple, wings blue.
- Dorothy Eckford**—Best large white, showy.
- Extra Early Blanche Ferry**—Carmine rose, wings white with pink.
- Flora Norton**—Bright blue, most brilliant.
- Hon. Mrs. E. Kenyon**—Light Primrose, choice.
- Helen Pierce**—White marbled with bright blue.
- Janet Scott**—Bright Pink.
- King Edward VII**—Best bright scarlet, very showy.
- Lord Nelson**—Rich deep navy blue.
- Lady Grizel Hamilton**—Standard light mauve, wings lavender.
- Mrs. Walter Wright**—Rose, purple.
- Miss Wilmot**—Orange and pink, wings rose.
- Prima Donna**—Pure self pink.
- Queen Alexandria**—Bright scarlet red.

After much investigation and observation we have picked out the best and ask our customers to confine their purchases to the above names.

Spencer or Orchid Types

MIXED VARIETIES—Choice

Per oz.	Per $\frac{1}{4}$ lb.	Per lb.
25c.	.75c	\$2.25

Early Flowering Spencers—Choice Mixed.

A development in Sweet Peas which is passing throughout the entire list of varieties, each old color and form being enlarged and beautified beyond compare and which in turn, when firmly fixed, will entirely supplant the old and familiar forms.

Per packet, 10c.

Here follow twenty-nine varieties of Spencers—what is the use of offering one hundred and twenty-nine—our customers should be thankful we do not cause them "Brain Fag" by naming all the so called sorts, but get down at once to the best. Named sorts 10c. pkt.

Per pkt.	Per oz.	Per $\frac{1}{4}$ lb.
10c.	40c.	\$1.10

Named Varieties

- America**—Crimson Scarlet, distinctly striped with white.
- Apple Blossom**—Standard Crimson pink, wings white.
- Asta Ohn**—Pinkish lavender suffused mauve.
- Aurora**—Orange rose striped on white.
- Austin Frederick**—Cream colored, waved or filled. A first class lavender.
- Barbara**—Orange, salmon large.
- Cardinal**—Brilliant poppy scarlet or bright red.
- Countess**—Bright clear pink on white ground.
- Elfreda Pearson**—Best blush pink.
- Fiery Cross**—Intense orange-scarlet, cherry-orange, wings large, turkey red or military red.
- Flora Norton**—Bright clear blue.
- Florence Nightingale**—Clear lavender, little mauve.
- Golden Glory**—Golden Orange.
- Illuminator**—Rich orange, salmon, large flowered.
- Helen Lewis**—Standard orange, wings rosy salmon.
- Hercules**—Rose pink, immense long stems, flowers giants.
- King Edward VII**—Red Crimson, best scarlet.
- King White**—Best White, Gigantic Flowers.
- Lord Nelson**—Navy Blue, Wings lighter color.
- Margaret Atlee**—Very fine large flowers, salmon pink, giant flowered buff ground.
- Maude Holmes**—Large solid crimson.
- Margaret Madison**—Pale Lavender or azure-blue, graceful flowers.
- Mrs. Cuthbertson**—Carmine rose, prolific bloomer, wings white, strong grower, best pink and white.
- Queen Victoria**—Primrose fleshed rose.
- Royal Purple**—Large flower, fine form, best purple, young flowers lighter color than old ones.
- Rosabella**—Bright Rose, Waves large flower.
- Senator**—Claret and Chocolate striped, heliotrope ground.
- The President**—Brilliant rich dazzling orange scarlet.
- Wedgewood**—Large flowers, a good blue.

SALVIA SPLENDENS

A Specialty of Landreth. Very Superior. Large Flowered

\$1.75 $\frac{1}{2}$ Ounce. Per Pkt., 10c.

Every ounce of *Salvia Splendens* we sell is grown on Bloomsdale Farm, where every year we have eight to ten acres of broad scarlet patches scattered among the other crops, producing a most dazzling effect.

Half-ounce should raise 1000 plants. Sow seed in hot-bed or box in house and plant out when ground is warm, or sow outdoors when the Apple is in bloom. In bloom 60 days. 2 feet spread.

The Sage offered by Landreth is frequently produced from spikes three to four hundred to a plant, often fourteen inches long. No other Seedsman has such a choice strain.

Bonfire.—A fine variety, 3 feet high; forms a dense, compact bush. Brilliant scarlet. We especially recommend this sort of seed, which we grow on Bloomsdale 40,000 to 50,000 plants every year, each plant producing 300 to 400 spikes 10 inches long..... $\frac{1}{2}$ Oz., 1.00; 10

The Agricultural Department reports that a total of twelve (12) acres of Scarlet Sage is the output in the United States; the Landreth's with an acreage of nine grow three-quarters of all the Scarlet Sage Seeds in America.

Five millions of passengers on the tracks of the Pennsylvania between Philadelphia and New York are enchanted by the brilliancy of these Sage fields during the summer months. The plants standing four feet high and four feet broad, the rows four feet apart, the blooms imbedded in one solid sheet of scarlet.

Sunflower—Dwarf Double—Use as Screens

Per Pkt.

Sage, Bonfire

Scabiosa

SCABIOSA (Mourning Bride)

Pincushion Flower, known the world over as Mourning Bride. Is a well-known annual. Easy culture; blooms all the season. Fine for bouquets. 2 to 4 feet high.

Sweet William

Per Pkt.

SENSITIVE PLANT or MIMOSA

From its mysterious irritability, exceedingly always attractive, curious. When touched will instantly fold its leaves and droop. Seeming to possess almost human knowledge. It is so curious every one should have it. It will give you lots of fun. It is as easy to grow as a Pea or a Bean. 1 foot. Flowers pink..... $\frac{1}{2}$ Oz., 40c.; 10

SNAPDRAGON

See *Antirrhinum*, page 11.

SUNFLOWER (*Helianthus*)

The Sunflower is a well-known old-fashioned favorite, of late years wonderfully improved. The size and brilliancy of its flowers make it worthy of a place in every garden. Plant to hide objects.

Double Chrysanthemum Flowered.—5 feet. Oz., 30c.; 10

Globosus Double.—Globe flowered, yellow, 3 feet..... Oz., 30c.; 10

Dwarf Double.—3 feet. Densely double flowers. Oz., 30c.; 10

This gives really by far the greatest volume of bloom in a small space of most showy plants than any other plant which we can name, though very humble, possibly almost the humblest of the en-

Per Pkt.

tire list of flowers. Just try it against your fence or screen. Flowers 5 inches in diameter and double as a *Chrysanthemum*.

Russian Mammoth.—For field culture.

SWEET WILLIAM (*Dianthus Barbatus*)

These sweet scented perennials were favorites in our grandfathers' gardens. They bloom early in the Spring and continue in flower a long time. Plants are hardy and they will bloom in August the first and second years, and their number may be increased enormously by dividing the roots. Colors run from purple to white.

Double Mixed. 1 foot..... $\frac{1}{4}$ Oz., 30c.; 10
Single Mixed. 1 foot..... $\frac{1}{4}$ Oz., 20c.; 10

TEN WEEKS' STOCK

Stocks are half-hardy annuals, beautiful and fragrant old fashioned flowers. Sow under glass or on warm border early in Spring, transplant to rich ground.

Cut and Come Again (Princess Alice) is the finest and most floriferous white sort. For garden, pot or cut-flower use, it cannot be equaled. 16 inches..... $\frac{1}{8}$ Oz., 50c.; 10

Crimson..... $\frac{1}{8}$ Oz., 50c.; 10

Lavender..... $\frac{1}{8}$ Oz., 60c.; 10

Large Flowering.—Mixed colors. $\frac{1}{8}$ Oz., 40c.; 10

VINCA ("Periwinkle")

Valuable for pot culture or for borders, tender perennials. Very desirable window decorations. Sown early, blooms continuously same season until frost. 1 foot.

Alba pura.—Pure white; spread 8 inches. $\frac{1}{4}$ Oz., 35c.; 10

Rosea.—Spread 8 inches. Rose petals, crimson eye..... $\frac{1}{4}$ Oz., 35c.; 10

Mixed.—Several colors; spread 8 inches..... $\frac{1}{4}$ Oz., 30c.; 10

Ten Weeks' Stock

Verbena—see preceding page

VERBENA

Per Pkt.

The **Verbenas** are half-hardy perennials of creeping habit, very fragrant. No flower garden is complete without Verbena. Partially upright, but when prostrate taking root freely where stems come in contact with the ground. Grand for bedding. In bloom 90 days.

Sow the seed $\frac{1}{4}$ inch deep in a box of light rich soil. Start in February or March under gentle heat of hot-bed or even in sunny window, and after hardening off transplant the seedlings in May or June in open ground in good, rich soil.

- Auricula-flowered.**—White eye; spread 2 feet. $\frac{1}{4}$ Oz., 40c.; 10
Rosea Stellata.—White eye..... $\frac{1}{4}$ Oz., 50c.; 10
Firefly or Scarlet.—Height 9 inches; spread 2 feet..... $\frac{1}{4}$ Oz., 50c.; 10
Mammoth Pink...... $\frac{1}{4}$ Oz., 50c.; 10
Mammoth White...... $\frac{1}{4}$ Oz., 50c.; 10
Mammoth Blue...... $\frac{1}{4}$ Oz., 50c.; 10
Mammoth Choice Mixed.—Height, 9 inches; spread, 2 feet..... $\frac{1}{4}$ Oz., 40c.; 10

WALLFLOWER

A favorite with old-fashioned people. Best in place on rockeries. It is a half-hardy biennial, producing beautiful fragrant flowers. Requires protection during the Winter. Blooms second year. 18 inches.

Large Flowering Double Mixed. $\frac{1}{4}$ Oz., \$1.00; 10

Large Flowering Single Mixed.—2 feet..... $\frac{1}{4}$ Oz., 20c.: 10

ZINNIA

An annual. Is a long-stemmed annual of robust habit, blooming from July to October. Seeds can be planted in the open, or young plants transplanted if desired. Dwarf varieties should stand about one foot apart, and tall varieties double this distance. Will grow anywhere and stand any amount of rough treatment. In bloom 60 days. Plants 18 inches' spread. Blooming until killed by frost.

Dahlia Flowered

A new race of this attractive flower. Blooms—measure about 4 inches in depth and 6 to 8 inches in diameter, often resembling show Dahlias.

VEGETABLE SEEDS

PARTICULAR NOTICE—The D. Landreth Seed Company gives no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds (Bulbs or Plants) it sells and will not be responsible for the crop. All sales subject to loss or damage by fire or other contingencies beyond our control.

All the popular sorts of Kitchen Garden Vegetables named in this Catalogue are placed in alphabetical order, having no reference whatever to periods of maturity.

These prices include postage up to a weight of two (2) pounds of Seed in the 1st, 2d and 3d Postal Zones. Buyers living west of the 3d Postal Zone, west of Cleveland for instance, will be charged 5c. per pound additional, on the entire weight of the package.

ARTICHOKE (FRENCH SEED)

Three Ounces of Seed to 100 Yards of Row.

This plant may be grown from seed sown when the Cherry is in bloom or from suckers taken from established plants. If the seed be sown, the plants may be raised in beds and transplanted. The seedlings or sets should be planted out in rows at four feet apart and eighteen inches in the row. Success with it in the United States cannot be expected north of the Cotton Belt.

Large Globe French Green.—Heads elongated, green. Plants spiny. Pkt., 10c.; oz., 85c.; $\frac{1}{4}$ lb., \$3.00.

ASPARAGUS (SEED AND ROOTS)

Of Seed, Sow in temporary location and let stand for two years; Eight Ounces to 100 Yards of Row; or Fifteen Pounds to the Acre. Of Two-year-old Roots, Set 5000 to the Acre.

If plants are used, get them two years old, do not waste time on one year old plants, set them in trenches twelve inches deep, the trenches four feet apart, the plants ten inches apart, cover with stable manure, then fill up the trench with earth.

If the rows be six feet apart, about 5000 plants are required to plant an acre.

Two-year-old roots are better than one-year-old ones. When well planted and fertilized, a cutting of sprouts can be made about three times the second year after planting. If cut more it is injurious.

Argenteuil Seed—Early Giant

That variety so much admired by Americans visiting Paris. Early for table, stems thick with purple heads, slightly pointed, scales overlapping. A continuous producer, as good here as in France.

Argenteuil Roots

By planting roots as compared with seed, the gardener saves three or four years' time.

Colossal Seed

The leading variety in the American Market, early, thick stalked, continuously sprouting.

Colossal Roots—2 year old.

Palmetto Seed

An early prolific, regularly developed, type of Asparagus of the Southern Seaboard, first grown in South Carolina.

Palmetto Roots—2 year old.

MARY WASHINGTON ASPARAGUS IS A WONDER

Mary Washington Roots

Mary Washington Asparagus Novelty—Claimed to be rust proof and surprisingly superior.

Originated at the Massachusetts Experimental Station, the male plants bearing the name Washington and the two female plants Martha and Mary, these three being the parents of this variety wherever sold. It is claimed that both are highly resistant to rust or blight. The shoots are long without branching, oval in the cross-section, dark green, tight buds and rather late in maturing. Because of the scarcity of the variety and because of its

value over ordinary stock, always costly. It will resist hot weather without blowing out. It is unquestionably the best Asparagus ever sold, a very large producer of extraordinary good shoots.

Mary Washington Seed

Pkt., .10; oz., .40; $\frac{1}{4}$ lb., 1.15; lb., 4.00

Mary Washington Roots

Per 100, 1.80; per 1000, 14.00

BROCCOLI

One Ounce of Seed to 100 Yards of Row.

A plant much resembling the Cauliflower, and like it derived from the wild Cabbage. Broccoli requires a longer season to develop than Cauliflower. It has more numerous and stiffer leaves, and the heads are smaller. The seed is best sown in Midsummer and Autumn, and the plants carried over Winter for planting out in Spring.

Large Early White, 150 Days.—Large white head, resembling Cauliflower.

We offer an especially fine strain of Early White Broccoli, and strongly recommend its more general culture.

Pkt., .10; oz., .50; $\frac{1}{4}$ lb., 1.75

Broccoli for Greens.—Cultivated alone for its loose, immature flowers, leaves, or foliage, much the same as is Collards. Very superior to Collards both in flavor and in texture.

Pkt., .10; oz., .30; $\frac{1}{4}$ lb., .90

BRUSSELS SPROUTS

One Ounce of Seed to 100 Yards of Row.

A variety of the Cabbage family, possessing the peculiarity of bearing upon its stem or stalk from 50 to 100 buds resembling miniature Cabbage heads. The leaves composing these heads resemble Savoy Cabbage in their crumpled texture and also in their color. The heads or buds, from 1 to 2 inches in diameter, form one of the most delicious garden vegetables, only equaled by the Cauliflower.

Dalkeith.—A leading variety of one of the most popular winter vegetables, tall stalks, 75 to 100 large buds like very small cabbages one inch in diameter, very choice. The development of the buds can be hastened and enlarged by cutting away ten or more leaves from the stalk when three-quarters grown.

Pkt., .10; oz., .30; $\frac{1}{4}$ lb., .90

Brussels Sprout

VITALITY

Observance of these qualifications in Seeds is as important as the observance of Quality, for if a Seed proves seriously unvital, the gardener by re-sowing avoids much loss of effort and disappointment. It is extremely annoying to lose valuable time trying to make dead Seeds grow, for they won't.

The Landreth's test about 50,000 samples of Seed yearly in their green houses, on benches containing earth about 8 inches deep.

Two samples of one hundred Seeds each of a sort to be tested, counted out, put in a paper packet

and a wooden label attached to the sample. The Seeds are subsequently planted in rows about three inches apart, the label stuck up, marking the variety and other details of the article. When the Seeds have sprouted a half inch to an inch above the ground, they are counted off and the number of sprouted Seeds marked upon the back of the label. If there are ninety sprouts then the Seed has a Vitality of 90 per cent, if only 70 sprouts, it only has a Vitality of 70 per cent.

NOTICE:—The above paragraph is as to Vitality. —Quality is another subject tested in the open fields of the Trial Grounds.

BUSH BEANS

No Strains Superior to Landreth's; Few Equal

Average Height of Vine, 15 Inches. 2 Qts. per 100 Yards; 90 Lbs. per Acre.

Sow when the apple is in bloom, and repeat for a succession as frequently as necessary until within fifty days of frost. In field culture sow in drills at two and a half to three feet apart. In garden culture, when the cultivation is done by hand, the rows may be twenty-four inches apart. The seed should be sown in such quantity as under ordinary circumstances to warrant one Bean vine to every two or three inches. If closer than this, their production will be impaired. On strong soil they do best at a greater distance. Yield about 125 to 150 bushels of green pods per acre.

Why plant Sorts with Strings when Stringless can be had for the asking—ask for Stringless.

Beans are one of the most desirable vegetables that can be cultivated in the family garden. Very easy to raise, to pick, and a vegetable which takes a short time from planting to edible condition. In our opinion there are entirely too many varieties of Bush or Snap Beans on the market and without regard to stock on hand, or to price, etc., we recommend for the family garden the following as the best varieties:

Bountiful for the best flavored, meaty, long, stringless green flat pod—**Stringless Green Pod**, **Giant Stringless** or **Full Measure** for the best long, meaty, round stringless green pod Bean—**Pencil Pod Wax** for the best round, long, meaty, stringless-wax Bean—**Wardwells Kidney Wax** or **Sure Crop** for the best, long, meaty, flat pod, stringless, wax Bean.

In using the Beans recommended above, no one can go wrong as we truly believe they are the best Beans in the market today, for family or market.

GREEN PODS

Black Valentines or King of the Earlys—54 Days

Color of seed, black. Shape, long and slim. Vine, 15 to 16 inches tall. Pods, half round to round, slightly curved, stringy, 5 to 5½ inches long, medium green, averaging 6 to 7 Beans. Profitable for early planting. Very hardy and productive, a most excellent shipper. 4 to 5 days earlier than Red Valentines, but not as good in quality.

Bountiful—52 Days

Vines 15 inches high, bushy and erect. Color of seed, light yellow with brownish color about eye. Pods, large, flat, 6 to 6½ inches long, containing 6 to 7 kidney shaped beans. Color of pods, light green, absolutely stringless at all stages and always tender. One of the very best for both market and private gardens. The earliest and most tender of the strictly flat stringless pods being in a class by itself on account of its good quality.

Dwarf Horticultural or Ruby—54 Days

Color of seed resembles Pole Horticultural. Height of vine, 14 inches. Pods flat, almost straight, dashed with red as they ripen. About 5 inches long, averaging 5 beans to the pod. Absolutely stringless. Large yellowish green leaves. Used also as a shell bean.

French's Horticultural—68 Days

10 days later than the Dwarf Horticultural. Color of seed, cream mottled purple. Height of vine, 22 inches. Pods flat, straight to a slight curve, stringy. Vines all show a running tendency, making a wild appearance; therefore, much more vigorous than Dwarf Horticultural, not as productive. Pods all green until quite ripe, when they are dashed with a brilliant red or carmine. Valuable as a shell bean, averaging 6 to 7 beans to the pod. Pods 6½ to 7 inches long.

Full Measure—62 Days

Seed mahogany color. Height of vine, 14 to 16 inches. Foliage slightly larger than Stringless Green Pods, more of a yellowish green. Pods average 6 inches long, more curved than Stringless Green Pods, absolutely stringless, possibly more green in color. Pods not so large in circumference as Stringless Green Pods. Decidedly the best round podded Stringless Bean in existence. Pods contain 6 to 7 beans.

Giant Stringless—62 Days

Color of seed, yellow. Long, cylindrical. Height of vine, 13 to 15 inches. Foliage resembles Full Measure. Not so early by 2 or 3 days as the older Stringless. Pods similar to Stringless but slightly longer and straighter. A more showy pod, about 6 inches long, containing 6 to 7 beans to pod.

Longfellow or French Lead Pencil—60 Days

Color of seed, like a faded Red Valentine, same shape. Foliage, larger and 2 inches taller than Black Valentine, more uniform habit. Height of vine, 16 to 17 inches. Pods longer and rounder than Black Valentine. Medium green, superior to Black Valentines. More meaty. Pods about 5 inches long, stringy, containing 6 to 7 beans Very productive. A good shipper.

BUSH BEANS—Green Pods—Continued

Stringless Green Pod

Lowe's Champion—56 Days

Height of vine, 11 to 13 inches. Foliage, dark green. Very large, almost round, crimson seed. Pods flat, green, stringless, broad, almost straight, very tender, averaging 4 to 6 beans to the pod. Also used as a Shell Bean.

Red Valentine—54 Days

Color of seed, red mottled. Foliage resembling Black Valentine, of a yellowish green. Height of vine, 14 to 15 inches. Pods, $4\frac{1}{4}$ inches long, almost round, curved, cylindrical with a crease in back, light green, semi-transparent, and stringy, aver-

aging 5 to 6 beans in a pod. One of the old standbys of good flavor, still very popular for family and market gardeners. Although stringy, inferior to none, always tender, fleshy, of good quality and appearance, a long keeper, therefore a good shipper.

Refugee Extra Early—54 Days

Color of seed mottled. Vines slightly stronger than Red Valentine. Very much resembling Red Valentines. Not quite so erect in habit. Inclined to spread more. Height, 15 to 16 inches. Pods, $4\frac{1}{2}$ inches long, 5 to 6 beans in a pod, absolutely stringless, light green and curved, almost round. An excellent substitute for Red Valentines and a sure cropper. Although a Refugee, it is distinct in vine, being bushy, erect and absolutely free from runners and tendrils, similarity to other Refugees is only in color of Seed.

Refugee Late, or 1000 to 1—70 Days

Color of Seed, mottled light drab splashed with purple. The latest green pod bean in cultivation. Height of vine, 16 to 18 inches. The most vigorous in growth of all Garden Green Podded Bush Beans. Foliage, small, smooth, light green. When planted in rows $2\frac{1}{2}$ feet apart, their growth is so vigorous as to fill up all the alleyways. Pods, round, slightly curved, about $5\frac{1}{4}$ inches long, containing 5 to 6 beans in a pod. When just fit to eat, stringless, afterwards quite stringy. Very popular with canners and Southern shippers.

Stringless Refugee—70 Days

For years the trade has been looking for a Stringless Bean having the many excellent qualities of Late Refugee or 1000 to 1. We now offer such a variety in our unsurpassed stock of Stringless Refugee. Absolutely stringless, fully as hardy and productive as the old Late Refugee and yet retaining all the good qualities of that sort. Pods, $5\frac{1}{2}$ inches long, round, slightly curved and containing 5 or 6 beans which are the same color as Late Refugee.

Stringless Green Pods—58 Days

Color of seed, brown. Pods about 6 inches long, averaging 5 to 7 beans in a pod. Vine much stronger, taller and with larger leaves than Red Valentines. Color of vine, dark green. Pods slightly curved, almost double barrelled in shape, green, meaty, absolutely stringless and one of the best beans on the market for any purpose. We cannot recommend our strain of this bean too highly. No garden should be without this high-class bean.

Tennessee Green Pods or Brown Bunch—60 Days

Color of seed, a yellowish brown. Height of vine, 12 to 14 inches. Inclined very much to sprawl. Pods, stringy, flat, productive, almost straight, about 8 to 9 and sometimes 11 inches long. Curved round to double barrelled in shape. Wrinkled and depressed between each of the 8 or 9 seeds in the pod.

$\frac{1}{2}$ lb. 1 lb. 5 lbs. 10 lbs.

BUSH BEANS—Continued

GROCERY OR BAKING BEANS

Navy or Boston Pea Beans

The bean which next to the Sacred Codfish made Boston famous. A little more dwarf than the Marrow in habit. Pods about 4 inches long, containing 5 to 7 small almost round white beans. Productive, 30 to 35 bushels to acre being commonly raised on good land. Used exclusively for baking.

Red Kidney

Height of vine, 20 to 22 inches. Length of pod 6 to 7 inches, containing 5 to 6 kidney shaped beans to every pod. Pods, flat, broad, stringy, straight, with very little meat. Used almost exclusively for baking and for soup.

White Cranberry or White Marrow

Height of vines, about 18 inches. 2 days earlier than White Kidney. Vines, coarse and rank in

growth, a tendency to run. Pods, stringy, flat, straight, 6 inches long. Average 5 to 6 beans in a pod. Used for baking.

White Kidney

Height of vines, about 21 inches. Very dense foliage. Pods, 6 inches long, flat, and almost straight. Used exclusively as a shelled bean.

WAX OR GOLDEN PODDED BEANS

Crystal White Wax or Silver Bean—65 Days

Height of vine, 14 to 16 inches, of a sprawling habit. Leaves, very small, light green. Blossoms, yellow and white. Pods average about 4 inches in length, containing 5 to 6 small oval white beans. Pods, round, curved, stringy. Color, greenish or silver wax. In certain sections, sometimes called Silver Beans. Distinct from anything else. Very productive.

Curries Rustproof Wax—52 Days

Height of vine, 15 inches. Color of seed, purplish black. Pods, similar in shape to Golden Wax, only longer. Pods, light yellow, stringy, flat, almost straight, about 6 inches long, containing an average of 4 to 5 beans in a pod. A great favorite with truckers in New Jersey.

Davis Kidney Wax—52 Days

Height of vine, 15 to 16 inches. Beans, large, white, kidney shaped. Length of pod, about 6 to 7 inches, containing 5 to 6 beans. Pods, handsome, long, flat, almost straight, stringy, light yellow. Very productive and very attractive when young, but as it grows older, it becomes very stringy and tough. Not particularly meaty.

Hodson Wax—72 Days

Seed, long, uniform in shape. Color, purple, red splashed with buff. Height of vine, 20 to 22 inches. Purple blossoms. Very late, of sprawling habit. Foliage somewhat resembles Late Refugee. Pods, about 7 inches long, slightly curved, creamy white, containing 6 to 7 beans. Largest and most handsome of all Wax Beans. A striking exhibition variety but of poor quality, being stringy, tough and suitable for snaps only when very young. Used extensively by Market Gardeners in the South on account of its shipping qualities and handsome appearance.

Improved Rustproof Golden Wax—50 Days

Height of vine, 12 to 14 inches. Pods, about 4½ to 5 inches long, almost straight, flat, broad, absolutely stringless, containing 5 to 6 beans in a pod. Pods, deep yellow. Seed, medium sized, oval, two-thirds of the surface being white, covered with shades of purplish red around the eyes.

BUSH BEANS—Wax or Golden Podded—Continued

Pencil Pod Black Wax—57 Days

Color of seed, black, long cylindrical. Height of vine, 16 to 18 inches. Pods, round, 6 to 7 inches long, absolutely stringless and very meaty. This bean is without doubt the best round podded wax bean in the market and no one should be without it in their garden. The pods are very handsome, long, of a bright yellow color and extremely tender; it cannot be recommended too highly.

Refugee Stringless Wax—62 Days

Height of vine, 16 inches. Pods, about 4½ to 5 inches long. Curved, round, inclined to be a little short, stringless and very productive. Color of pods, light yellow. Color of seed, yellow drab, splashed with bluish black. One of the merits of this bean is its great productiveness.

Round Podded Kidney Wax—56 Days

Color of bean, white with purplish eye. Pods, slightly curved, and 5 to 6 inches long, containing 6 to 7 beans. Light yellow, absolutely stringless and very meaty. A great favorite in certain sections of Pennsylvania. Strong growing vine with broad large rough leaves. Quality of the best. However, we do not consider it as good a bean as our strain of Pencil Pod Black Wax. A very shy producer of seed, therefore hard to get grown; the same farmer will never grow it twice as a seed crop.

Sure Crop—56 Days

Color of seed purplish black, resembling Curries Rustproof. Height of vine, 16 to 18 inches. Pods

about 6 inches long, containing 6 to 7 beans. Pods not as wide as Golden Wax but longer and absolutely stringless. We believe this bean should take the place of Curries Rustproof on account of its being stringless.

Wardwells Kidney Wax—57 Days

Color of seed, white with purplish eyes and kidney shaped. Pods, about 6 inches long, flat, meaty, absolutely stringless, almost straight, containing 5 to 6 beans in the average pod. Color of pods, golden yellow and very handsome. We believe this to be the best flat pod, Wax Bean in the market, and cannot be recommended too highly. A very shy seed producer.

Weber Wax or Crackerjack—48 Days

Height of vine, 14 to 15 inches. Pods average about 6 inches long, containing 5 to 6 beans. Very much resembles Curries Rustproof. Absolutely stringless. Pods, flat, long, but not as broad as Curries. Seed, yellow with white eye, kidney shaped. Vines, very hardy and productive. A very early, good wax bean.

POLE OR RUNNING BEANS—NOT LIMAS

For Larger Quantities, Write for Prices. 12 Qts. to Acre;
3 Lbs. to 100 Poles. Set Poles 4 x 3 feet.

Creaseback White—75 Days

Color of seed beans, white, long and narrow. Pods borne in clusters of 3 to 8, 5½ to 6 inches long, containing 8 to 9 beans. Early producers, round, meaty, stringless pods when young. For table use, better than the Green Kentucky Wonders. Extremely productive but not as early as the Kentucky Wonder.

Golden Cluster Wax—75 Days

This is one of the best early Wax Pod Beans on the market. Foliage strong, vigorous, with large light yellowish green crumpled leaves. Pods green when young, turning to golden as they mature, stringy, flat, broad, golden, meaty, 6 to 8 inches long, borne in clusters. 6 to 7 flattish dull white beans in a pod.

Horticultural Pole, London or Speckled Cranberry—75 Days

Sold years ago by this House under the name of Wren's Egg. Color of beans, flesh colored splashed or spotted with red. Pods after they pass marketable condition show a brilliant carmine and are very attractive. Is fairly productive late in the season. Pods, 4½ to 5 inches long, containing 6 to 7 beans, slightly curved and stringy. Is frequently used as a shell bean.

Kentucky Wonder Green Pod or Old Homestead—68 Days

An excellent climber, producing a long, round, twisted, light green pod. Early and prolific, tender, solid and stringless when fit to eat, afterwards it gets stringy. Very hard to equal in a green podded bean. Pods, 7 to 8 inches long, sometimes longer, borne in clusters, containing 9 to 10 yellowish brown kidney beans in a pod. The most used round snap-podded pole bean.

Kentucky Wonder Wax Pod—68 Days

Color of seed, dark brown, flattened shrivelled, usually look old. Pods, long, round, stringless when young, thicker and broader than Green Kentucky Wonder, but not so long and not so productive, but more showy. Beans close set in the pods. Pods curved, light golden or lemon in color, 6½ to 7 inches long.

POLE OR RUNNING BEANS—Not Limas—Continued

Kentucky Wonder White Seeded—68 Days

Seed pure white, a continuous bearer and almost rustproof. Pods round, sickle shaped, stringless, inferior to the Kentucky Wonder, being less productive and smaller, dark green foliage. Pods, green, $5\frac{1}{2}$ to 6 inches long, containing 7 to 8 beans in a pod.

Lazy Wife—83 Days

Seed, attractive, glossy white, round. Pods green, borne in clusters, flat and broad, $5\frac{1}{2}$ inches long, containing 6 to 7 beans in a pod. Small foliage, a good late productive stringless pole bean.

Landreth's Tennessee Wonder—69 Days

Dried seeds, large, flattish, and oval, incurved at eye. Color generally gray, but marked with many black irregular stripes. The Department of Agriculture Bulletin 100 states that the "Tennessee Wonder are the largest and handsomest, of all cultivated beans." The pods are 8 to 9 and sometimes 11 inches long. Curved, round to double barrelled in shape. Wrinkled and depressed between each of the 8 or 9 seeds in the pod. The pods are tinged with a purple color.

McCaslan Pole

A prolific, early maturing, green podded, pole variety, of excellent quality. Pods are rather flat and slightly curved, 7 to 8 inches long and quite stringless. The shell Beans are pure white, large, and very thick.

Nancy Davis, Striped Creaseback or Scotia—73 Days

Seed Kidney shaped, mottled putty color with dark stripes. Blossoms bright crimson with silver gray hood. Pods green, round, full, creaseback, slightly curved, dashed with purple as the pods mature, 5 to $5\frac{1}{2}$ inches long, containing 8 to 9 beans. A good semistringless variety. A good climber, exceedingly productive.

A superior Corn-field bean to White Creaseback.

Red Speckled Oval Cut Short—75 Days

Pods $3\frac{1}{2}$ inches long. Flat, stringy, a favorite in the South for planting to Corn, as it is a good climber. Seeds red, distinct in form.

Scarlet Runner—64 Days

A half round, broad, pod, stringy, valuable as a shell bean or for ornamental purposes. Not a good runner in the Southern states, color of blossoms scarlet, used for food as well as for ornamental purposes. Pods average 4 to $4\frac{1}{2}$ inches long, containing 3 to 4 beans in a pod. A great favorite in the New England states.

White Dutch or Caseknife—68 Days

Color of beans white, somewhat resembling in shape a small Lima. Used either as a snap-short, when very young, or shelled as a Lima when more largely developed, or for soaking when dry. Pods long, flat, undulated, broad, stringy, very little meat, principally good for shelling. Color of pods green.

Ten ounces sample of every sort of Seed grown on our own lands, or grown for us on contract, or imported, is put away soon as received, properly numbered or labeled and sown in the Trial Grounds the succeeding spring. When fuller grown, critical observation is made of its quality. The particular

Seed on every order from a customer when it is filled in addition to being properly checked off on the original paper is given the serial number of the lot of Seed from which the order was filled and the Trial Ground sample bears the same serial number.

DWARF OR BUSH LIMA BEANS

Two weeks earlier than Pole Limas. Average height of vine, 14 to 20 inches.

No one should be without one of the following varieties of Dwarf Limas in his garden. We cannot recommend them too highly. They are two weeks earlier than the Pole Limas and much easier to raise as one does not have to bother with poles or strings. Their flavor, however, is not as pleasing as the old-fashioned Pole Lima. Plant in drills 30 to 36 inches apart, dropping the beans 4 to 5 inches apart. If too thick, they will not do well. Do not plant in cold ground as they are liable to rot. If possible plant the Seed of Lima Beans with the eye down. Deeply rooted plants will continue in growth after others have stopped growing.

Fordhook Bush Lima

Improved Bush Lima—76 Days

Height of vine, 16 to 20 inches. Seed thick, but not as thick as Fordhook. White tinged with green. Very broad, dark foliage. Sturdy and 10 days earlier than any large-podded pole lima. Pods, 4 to 5 inches long, medium green and averaging 3 to 4 rather flat beans to the pod. Very productive, vigorous plant. Popular with the market gardeners.

Burpee's Bush Lima—77 Days

Seed more nearly resembling the old Jersey Pole Lima than any other, but a trifle smaller. Flat, usually having the appearance of a cut on both sides of the eye. This is a lima bean borne in full-sized pods on plants of a dwarf habit. The pods average 4 to 5 inches long and contain an average of 2 or 3 beans, although some pods contain 4 beans—maturing for the table about 10 days earlier than the earliest Pole Lima. Vines not averaging over 20 inches high. Flavor not so pleasing as the Jersey Pole Lima.

Fordhook Bush Lima—76 Days

Seed large, oval, white with a green tinge, very plump like the Challenger Pole Lima. Foliage dark green, bush habit, erect. Average height, 16 to 20 inches, according to soil, quite bushy, branching freely. Pods 3 to 4 inches long, borne in clusters, averaging 3 to 4 thick-seeded beans. Sold in immense quantities. The most popular of all Bush Limas, both with family and market gardeners in the Eastern states.

Henderson's Dwarf Lima or Dwarf Sewee—74 Days

Seed, small, flat, white with a tinge of yellow. Height of vine, about 14 inches, compact. Leaves, small and pointed, more of a metallic dark green than any other Bush Lima, a dwarf form of the Carolina or Pole Sewee. Early and very productive. Pods average $2\frac{1}{2}$ to 3 inches in length and contain 3 to 4 small beans. They are of fine quality for so early a bean. Sold years ago by us as Dwarf Carolina. Very popular with Commercial Cannery. Used extensively as a shell bean. Continue to produce until killed by frost.

Landreth's Bush Lima—74 Days

Seed white, small, but more plump than Henderson's. Strictly a bush. Vine compact, dark green. Foliage not as dark as Henderson's, more productive in pods, which are more curved and one-fifth longer. Slightly broader and more plump. Pods average $3\frac{1}{2}$ inches long, containing 3 to 4 beans in a pod. A much better bean to can than Henderson's Bush.

POLE LIMAS

THE FLAVOR OF ALL THE POLE LIMAS IS SUPERIOR TO BUSH LIMAS

Carolina or Sewee—82 Days

A small early variety of Limas, much more used in the South than elsewhere, as a Butter Bean, more vigorous in growth than the ordinary Jersey Limas, more prolific. Very small foliage, short pointed leaves, more metallic green than the ordinary Lima. Pods, about 3 inches long, borne in clusters, averaging 3 to 4 small white beans.

Challenger Lima or Dreer's Pole—89 Days

Beans very full or plump, larger foliage than Landreth's Early Prolific Lima, pods not so long as the King of the Garden by $1\frac{1}{2}$ inches, but as broad; not so early as the King of Garden, the original parent of the Fordhook Bush Lima, very meaty and good flavor. Pods about 4 inches long, containing about 3 to 4 beans.

Landreth's Early Prolific Lima—83 Days

More productive than any other Pole Limas, suitable for picking and maturing over a long season. Averaging 3 beans to the pod, pods 4 inches long. Dry seed the same color as King of the Garden, but slightly smaller in size.

Large Early Jersey Lima—84 Days

One of the old standbys of the Lima type. Pods average 4 to $4\frac{1}{2}$ inches long. Contain 3 beans each. Seed identical to the King of the Garden.

King of the Garden Lima—84 Days

One of the best and most productive Pole Limas, large leaved, good climber. Vine of a branching habit, pods about $4\frac{1}{2}$ to $5\frac{1}{2}$ inches long, dark, large and containing about 3 to 4 beans to the pod. Seed flat, and white with a slight green tinge.

Landreth's Large Green Seeded Lima—84 Days

Seed of a decided green tinge, that is, not bleached ivory-white. This green seeded selection is a going-back to the Jersey Lima of years ago which has never been excelled. The best form of Jersey Limas on the market today for both private and market gardeners, unsurpassed in flavor, of superior quality, averaging 4 to 5 beans to the pod, which are $4\frac{1}{2}$ to $5\frac{1}{2}$ inches long.

It may be best in many cases, if the cheap Seeds had not vegetated at all, when there would be no worthless crops to cultivate.

There are many reliable dealers in Seeds and we advise Gardeners to purchase only from Seed sellers who know their business.

You have a perfect right to inquire from your local Merchant whose Seed he is selling—there are many reliable City Seed Firms in the country and hundreds of scallywags who sell cheap Seeds and necessarily of cheap quality.

Buying Seeds is a matter of confidence. Be certain when buying to buy from a House in whom you have confidence—one with a reputation to sustain.

In buying Landreth's Seeds, you are buying from a House which has been in business 145 years, the oldest Seed House in America. It shows conclusively they would not have existed so long had they not given good goods, good attention to business and fair prices.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

BEETS

THESE PRICES
INCLUDE POSTAGE

Ready for Table Use Forty to Forty-five Days from Sowing.
Five Ounces of Seeds to 100 Yards of Row. Fourteen Pounds to Acre.

Beets are a great acquisition to the family gardener, provided they are pulled young, before they get too large. They should be sown early in the Spring, as soon as the ground is tillable for a summer garden, and in July or August for the Winter garden, to enable them to get sufficiently large to be in first-class condition to pit for Winter use. Beets sown too early in the season grow too tough to be carried over in pits in the Winter.

Crosby Improved Egyptian

Bassano—45 Days

A strong growing, almost solid green foliage, very early variety. Considered by many to be the most sugary of all table beets grown. Green topped, with a white midrib to leaves. Outside skin often pink. Flesh light pink, almost white; when cut shows very large whiter zones.

Crimson Globe—50 Days

A very popular beet on account of its excellent color and shape. Deep globular in shape with little crown and a clean cut, small tap root. Skin and flesh of a dark red color. Of superior quality.

Crosby Improved Egyptian—45 Days

A very choice form of the Early Egyptian. Shape, however, much more of a globe. Bulbs when cut are raw beef color. Sweet, tender, of excellent quality. A great favorite with market gardeners. Leaves purple mixed with green. Purple midrib. Bulbs free from fibrous roots.

Detroit Dark Red—50 Days

Of great celebrity, because of its merit. Form oval, flesh dark blood. Skin smooth. A favorite beet with all private and market gardeners. Very extensively used by canners because of its good dark red color.

Early Wonder—45 Days

This is one of the earliest of the small table beets for outside culture. It has small leaves, is flat to globe in shape. Bright red skin. Vermilion red flesh with distinct zones of a lighter red. It is of excellent quality being sweet, tender and free from fibrous roots, an Improved Crosby.

Extra Early Eclipse—illustration on next page—42 Days

Bulbs globed, very early as name indicates, small tops. Roots smooth, round, inclined to be top-shaped. Leaves light green, broad with broad orange midrib. An excellent beet for the family garden.

BEETS—Continued

Extra Early Egyptian—40 Days

The roots of this Beet develop quicker than any other Table Beet. Bulbs half globular or flat at the poles. Roots very smooth and dark red. Flesh of a purplish red. Small tops.

Half Long Blood or Bastian Half Long—60 Days

Fine color outside. Excellent color when cut. Tops purple and green in about equal proportion. Very desirable for a late beet and one of the best producing. A handsome tapering wedge-shaped root, growing well under the ground. Season much earlier in maturity than other long beets.

Landreth's Best—45 Days

About 5 days earlier than Detroit, more ball-shaped altogether a superior sort. Slimmer tap roots—more mouse-tailed. Roots vary from deep globe to round. Flesh deep red of excellent sugary quality. Skin smooth and free from fibers. Private gardeners will find this beet of fully double the usual value if they are pulled and served on the table when so small as to be no larger than a silver quarter dollar. The Landreth's Best is very choice for such early use, having an intensely red color and delicate texture and flavor.

Landreth's Early Blood Red Turnip—50 Days

In this particular beet you have one of the old standbys. Very hard to equal. Top-shaped, early in maturity and one of our best sellers. Very desirable in every respect. Skin deep red and very smooth. When cut it shows one of the best red Turnip Beets on the market.

SWISS CHARD

1st—The Tall Golden Yellow Savoy leaved as represented by the Lucullus.

2nd—The Half Tall Golden Leaved, as represented by the Large Ribbed.

Large Ribbed

Greens for boiling are always acceptable. Spinach cannot always be had and often is tough and stringy. The Chard, on the other hand, is in season from early Spring to Autumn frost, and will be found a most agreeable dish. One of the best vegetables, the green foliage used like Spinach, the thick-leaved stem cooked like Celery. The roots of this plant are not good for edible purposes. The cultivation of this is the same as that of Beets.

Lucullus

Stalks pure white and thick as Rhubarb. Foliage yellowish green and crumpled like Bloomsdale Spinach or Savoy Cabbage. Very choice. Growing in popularity every day. The tops cook like Spinach and the stems like Celery.

SUGAR BEETS FOR CATTLE

Giant Feeding Half Rose Sugar

This beet is extremely desirable for cattle—of high nutritive value. The flesh is white, and very sugary.

Klein-Wanzleben

Sugar beet favorites have united in recommending this as possessing the highest sugar producing qualities, as much as 18 tons of sugar having been made from 100 tons of root of this variety. We highly recommend it also for feeding.

Vilmorins Improved

A leading sugar-making sort doing well on a wide range of soil and especially rich in sugar.

MANGOLD WURZELS FOR CATTLE

Golden Tankard—90 Days

A rapidly maturing root adapted to shallow lands, although doing well on every soil. The root has broad shoulders, rich golden skin, solid sugary flesh, and golden footstalk. The flesh is yellow zoned with white.

Mammoth Long Red—110 Days.

In England, 80 tons have been grown to the acre. Everywhere the most popular variety for cattle feeding. Roots very long, well formed, usually straight, flesh-white tinged with rose. We cannot recommend this beet too highly to dairymen.

Yellow Globe

Roots on top of the earth, 8 inches in diameter, skin golden, flesh white.

CABBAGE

No Selections of Cabbage Are Better Than Those Offered by Us. Gardeners Can Rely Upon Landreth's Cabbage Seed.

Deep rooting will resist drought, so in setting out cover to the first leaf-stems.

Supply plenty of moisture and manure.

Do not sow seed for an entire crop at one time, for plants of various ages are differently affected by circumstances, and by separate seed plantings you have a better chance to profit from at least a portion of your crop.

All Head Early—100 Days—See next page.

Early, large, flat, short stem, solid head, early for its size. Few outside leaves, consequently, can be planted closer together than most other large Cabbages. A very reliable sort and well named. One of the best of the intermediate varieties. It is one of those varieties which can be planted early in the spring as well as for late Autumn planting. One of the best Cabbages on the market.

Bloomsdale Early Dwarf Flat Dutch—100 Days

A large second early variety. A good keeper of the finest quality. Heads round to flat, solid, leaves rather short; head will stand without bursting. Such qualities as the market gardener can duly appreciate.

Copenhagen Market—70 Days

The plants are very vigorous, short stems, few outer leaves, producing a very hard, round head, very uniform in size and of long keeping qualities. In maturity following the Charleston Wakefield. Being larger it produces a greater tonnage per acre and is very profitable. This variety is gaining in popularity every day.

Golden Acre

Here we have an eye opener, for seed of this variety planted at the same time will mature one week earlier than Early Jersey Wakefield, besides being larger and much more showy. By actual count 96 of 100 plants produced fine heads, each of which ripened at one time; an almost unbelievable condition. It is conical round in shape, short stem and almost rests on the ground.

Glory of Enkhuizen—100 Days

A rather small but very hard heading sort set in a cluster of long, spreading leaves. Is a hardy grower and a sure header. Many market gardeners prefer this sort to all others on account of its excellent quality and its sure cropping habit.

190 tests of Cabbage—other tests see page 5. 100 Red Cabbage tests on other parts of Trial Grounds.

CABBAGE—Continued

Chinese or Pe Tsai Cabbage—70 Days

There are numerous varieties of this Cabbage on the market but we believe this is the best of them all. It is often called Celery Cabbage and resembles a Cos Lettuce more than Cabbage. The leaves are very much crumpled, of light green, somewhat resembling smooth Mustard, but with broader ribs. When tied or bunched up with raffia or string the inner leaves bleach to a creamy white color. It is distinct from any American or European Cabbage. It should be sown in the Middle States after the early part of July; in the Southern States after the early part of August.

Charleston or Large Wakefield—80 Days

A large, flattish variation of the pointed early Jersey Wakefield. Heads are half round, later than the Jersey Wakefield by several days and 40 to 50% larger. This variety is also extremely popular with market gardeners owing to its earliness and its size.

Large Charleston Wakefield

Charleston Large Wakefield, Landreth's Very Select, 80 Days.

Specially selected. Very choice and uniform, best of any from any source. One-third stronger grower than the Jersey Wakefield. One of the best early shipping sorts, larger but not so early as the Landreth's Selected Jersey Wakefield. Super excellent.

Early Flat Dutch—90 Days

This variety produces thick leaves, very dark blue in color. Succeeds admirably in Southern States on account of its ability to resist heat. It is found especially valuable to sow in cold frames in October and November to plant out in the Spring as a succession to the smaller earlier pointed varieties.

All Head—well named, early, flat, large, reliable

Early Jersey Wakefield, Landreth's Very Select, 70 Days

Specially selected, extra early, choice in all good qualities, earlier than Long Island Wakefield. Recommended to gardeners. Heads ovoid, broad at the base and running to a blunt point. Very solid, very early, choice in quality. This excellent variety is the surest heading of the very early varieties and most depended upon by the market gardeners of the Southern States for heads to send north in the early Spring. A very superior selection.

Landreth's Very Select Early Jersey Wakefield

CABBAGE—Continued

Early Jersey Wakefield—70 Days

A short stemmed, hardy, early cone-shaped heading variety, broad at the bottom with a pointed peak, the leaves leathery and well folded over the top.

New York Early Summer—95 Days

A good second early. Plants strong, compact grower, with a number of rather spreading outer leaves. Heads are medium size, round, slightly flattened on a short stem. An excellent sort.

Succession—110 Days

An intermediate between Early Flat Dutch and Late Flat Dutch. Slightly later than the second early sorts. Plants are vigorous with short stems; heads are large, deep and excellent quality.

Winnigstadt—100 Days

One of the old standbys, producing a medium size, long pointed or cone shaped very solid head which is closely wrapped with dark, slate colored leaves. A favorite with old gardeners as it is one of the very best second early sorts.

LATE VARIETIES OR WINTER SORTS

Bloodsdales Large Late Flat Dutch—120 Days

The original strain of this cabbage was obtained by us from Swedish gardeners who settled in Philadelphia, previous to the Revolutionary War. Ever since that time we have been continually reselecting this Cabbage and we now believe it is second to none of this type. It is late, produces large solid weighty and very uniform heads and is the best cropper obtainable for tropical or semi-tropical climates.

Bloodsdales Large Late Drumhead—120 Days

Is a large heavy head, smooth-leaved, late ripening Cabbage. No strain is superior and few equal to this. Head is thick, broad, solid, flat. Leaves extend well over the center leaves of the head and fold down alternately tightly, forming a compact head. The natural habit of the seedling plant is to develop short thick stocky stems but this quality is affected by the system of growth, for if the seedlings are crowded in the bed or grown among weeds, or under the shade of a house, fence or tree, they reach upward for air and light, resulting in long, slim stalks, which had form of plants cannot be corrected by any subsequent culture. We cannot too highly recommend this strain of Large Late Drumhead.

Danish Ball-Head Tall Stem or Hollander—120 Days

A Winter Cabbage of great celebrity in Northern locations, particularly New York, Minnesota, and in mountainous sections, because of its reliability as a heading sort, and because all heads are alike, round in shape, more dense than any other Cabbage, pure white within and of great keeping qualities, extending for months.

Danish Round Short Stem or Amagar—116 Days

This variety is considered by many superior to the tall stemmed ballhead, having a shorter stem, and a little earlier. It is the most popular now of the two varieties. It produces a very solid, good quality, medium size round head and is

very popular with the market gardeners in Cabbage growing districts of northern latitudes. The stock offered in this catalog is very hard to equal.

Red Dutch—100 Days

Leaves red or purple. Head medium size, round, solid, deep red color. Medium length stems, generally used for pickling.

Stein's Early Flat Dutch—90 Days

Growing constantly in demand by the early planters of Cabbage in Texas and the South for the northern market in the Spring. This variety produces early, large, flat, solid heads. A very vigorous plant with a short stem. The true stock of seed is hard to obtain, and greatly sought.

Surehead—115 Days

This is a popular strain of the Large, Late Flat Dutch type of Cabbage so largely grown for Winter. The heads are large, round, flat at the top, remarkably uniform, extra hard, firm, and of fine texture. An excellent variety and stands shipping well.

Drumhead Savoy—100 Days

The best of its class and is as palatable as a Cauliflower. One of the best Cabbages one can grow in a private garden. Large size flat heads, curly or crinkled leaves. Stalk short, habit compact. We believe that no strain of Savoy Cabbage equals the one we are offering.

Volga or Stonehead—100 Days

A most reliable sort, a superior header, never disappointing, with broad, flat, hard, large, solid heads of excellent keeping quality. Quite distinct in color from other Cabbages, it being a silvery green, with smooth folded leaves, the color of a silver coin. Plant vigorous and unusually short stalked.

Yards of Row. 4 Lbs. to acre.

CARROTS

THESE PRICES
INCLUDE POSTAGE

For domestic use sow when the Apple is in bloom. Drill in rows of fifteen inches for hand culture, two and a half feet for field culture, and when two inches high thin to four inches apart.

Carrots for the table should always be used when half grown, because then tender.

Ox-Heart
Right size for table or smaller

diameter at the top of crown tapering to a slight point. This is a variety used both for table and stock feeding.

Ox-Heart or Guerande—65 Days

A thick blunt variety, 3 to 4 inches long and 1½ inches in diameter. When full size grows to a diameter of a pint measure but should be eaten when one inch in diameter. Bright orange. An excellent variety.

Orange Danvers Half Long—65 Days

This is probably the best known variety of Carrot, as for years Market Gardeners have used more seed of this variety than all others combined. It is a broad shouldered, cylindrical variety, 7 inches long, 2½ inches at the crown and gradually tapers to a blunt type. Color light orange. Has rather a large core but is very tender and of excellent quality.

St. Valery—70 Days

Roots 10 to 12 inches long, width 2 to 3 inches at the shoulder. Broad shouldered tapering to a sharp point. Bright red color. Small leaves. Flesh sweet and tender. Similar to a pointed Danvers.

CATTLE CARROTS

Large White Belgian—100 Days

This is one of the very best cattle feeding carrots. Roots half-long, 7 to 8 inches in length. Smooth with a heavy shoulder. Color of flesh a creamy white, with a light green crown. Very productive, and easy to harvest.

Large Yellow Belgian—100 Days

Very similar to the White Belgian in form and productiveness, only more slender. More attractive, owing to its yellow color. Used entirely for cattle feeding, producing an excellent quality of milk.

Early Scarlet Horn Blunt or Dutch Horn—60 Days

A very popular early sort. Roots a trifle less than 3 inches long; 1¼ inches at the shoulder and almost that wide at the base where it is decidedly stump rooted. Color bright orange scarlet.

Early Scarlet Horn Pointed or English Horn—60 Days

This variety is very similar to the Dutch Horn with the exception that instead of being a blunt root it tapers uniformly from a broad shoulder to a decided point.

Chantenay Half-Long Scarlet or Model—65 Days

Roots about 5 to 6 inches in length, 2 to 2½ inches thick at the crown. Small top set in a slight depression. Color deep orange red. A fine medium early, half long, stump rooted Carrot, free from core. One of the best for Market Gardens or Private use.

Long Orange—80 Days

This extremely productive carrot frequently grows 8 to 10 inches long, sometimes longer, and produces a root of deep orange color, of about 3 inches

Chantenay Carrot
Right Size for Table

CAULIFLOWER

THESE PRICES
INCLUDE POSTAGE

**One-Half Ounce of Seed to 100 Yards of Row.
Either Moisture, or High Altitude Assures Success.**

This delicious plant, like Broccoli, is distinguished from other table vegetables by producing edible flower heads. By long years of selection and culture of some unusual natural variations of this plant of the Cabbage family, discovered in the Middle Ages, the flowers of the Cauliflower have been, to a large extent, rendered abortive, and the flower stems multiplied, shortened and thickened till they have been bred to form a half-globular compact crown or head which, when cooked, is tender as marrow, and the choicest of all esculent vegetables. Varying with climatic and soil conditions, the seed is sown at all seasons—in hotbeds at close of winter, out of doors when the apple is in bloom, again when the oak is in full leaf, again in midsummer, and again, during winter, under glass. The young plants are treated the same as Cabbage and the larger plants require the same rich fertilizer and culture—indeed more intense culture, as only those Cauliflowers are good which are grown quickly. We offer only seed of the highest quality.

The earliest varieties are most likely to succeed in the hands of inexperienced growers. Sow the early sorts in seed beds beginning of autumn, keep them in a "cold frame" protected from the severe frost of the winter, by sash, and transplant into deep and very rich ground as soon as frost ceases. Hand glasses or boxes placed over them at night when they are put out are useful. It should be observed, however, that success is very uncertain in dry localities.

There is little difficulty in having fine Cauliflowers when planted in frames under glass, at close of winter, so as to advance them ahead of the early summer heat. The late varieties mature in autumn, and are sown at the same time and managed similarly to Cabbage. They do best in localities where the atmosphere is damp and saline, as on the coast or in regions of high altitude. We may add that Cauliflower can only be grown on rich, well-tilled, well-watered soil, and that it can hardly be overfed.

Snowball Cauliflower, 90 Days

CAULIFLOWER—Continued

Algiers, 110 days

An early, hardy and admirable sort used before Snowball was introduced. A certain header.

Dry Weather Cauliflower, 95 days

All cauliflower plants need an abundance of moisture, doing best on re-claimed marshes with wet bottom soil. They also do well when the atmosphere as on the sea coast is charged with moisture, yet none of these conditions apply to mountain sides, the altitudes there seeming to invigorate the plants, provided the land is well fertilized. The variety Dry Weather Cauliflower, is so quick in growth as to pass through fewer adverse conditions than later growing sorts, for the production of showy heads.

Half Early Paris—90 Days

A small, hardy sort, very vigorous in growth. Produces a crop while many other sorts fail. Leaves large, small stem and a small but very white head. It is a very popular variety on account of being a sure cropper under very unfavorable conditions.

Lenormands, 120 days

A large, late variety, with well-formed white handsome heads. Strong grower.

Snowball, Early, 95 days

An extra early sort. Early as any under whatever name, plants short and stocky, erect, pointed leaves and producing round heads, pure white; extremely early and perfectly solid. Edible heads 90 to 100 days from planting. Autumn crops are earlier than Spring crops. Twenty to twenty-four heads will fill a barrel. A variety of widest celebrity, by reason of its reliable qualities of productiveness color, flavor, and keeping in condition. Leaves long and narrow. No strain superior to that Landreth offers. The most popular variety in use.

Veitch's Autumn Giant, 130 days

Very vigorous, long-stalked, large, dense foliage, stiff heads, long standing; should be sown early.

CELERY

THESE PRICES
INCLUDE POSTAGE

Four Ounces of Seed to 100 Yards of Row.
Maturing in 130 to 150 Days, According to Season.

Sow thinly just before the Apple is in bloom on a finely raked, well-pulverized piece of ground, in a moist place or convenient to water, which apply freely during dry weather. The seed should not be covered more than a tenth of an inch.

It is quite customary after planting celery to cover the ground with a slight sprinkling of straw or salt hay, or boards, so as to retain the moisture. As soon as the seed is sprouted, take the hay or other covering off. Celery seed will not germinate in dry soil; therefore, it is very essential to plant it very early in the Spring.

Celery is one of the best of our Winter vegetables. To get a good crop, plants must be removed from seed beds and planted in rows—rows about 4 feet apart, plants set about 4 to 5 inches apart so that the plants when fully developed can be easily worked. The whole planting so arranged that there is space between the rows to obtain earth for earthing up sods to bleach the stalks in Autumn.

Celery Seeds are used for flavoring soups.

Paris Golden Yellow (French Grown Seed) Old Type—120 Days

A solid, golden variety, very showy and rich. Very easily blanched as it naturally takes on a very attractive golden color, which is intensified by earthing up. Thick, solid and crisp; a waxy golden appearance.

Among the many hundreds of Seedsmen in the United States selling seed of so-called Paris Golden Celery, there can certainly be picked out twenty absolutely distinct strains or breeds, varying from the best to the worst, these being mixed with variations of green or mixed with hollow-stalked or mixed with plants of weak habit, such as will not be found profitable.

Don't purchase seed of doubtful quality. We have regular customers of the Landreth strain of Paris Golden who could not be induced to change the breed of plants by any argument or lower price—they cannot afford to make any experiments. Beware of cheap seed just as you would of cheap diamonds or gold bricks.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

CELERY—Continued

Paris Golden Yellow (French Grown Seed) New Type—125 Days

This variety is exactly the same as the old type with the exception that it produces a little taller and more vigorous stalk.

Giant Pascal or Large White—140 Days

A mammoth, silver-white stalked variety of French origin, one of the best, if not the best, large green celeries still on the market. It is very productive, consequently, very profitable. We consider it one of the best celeries for Winter use. It is very easy to bleach and when done presents a yellowish, white color, very solid and crisp and might be considered to have a very nutty flavor.

Easy Blanching or Sanford Superb—130 Days

Vigorous, plants medium size, stalks slightly taller than Golden Self-Blanching, white, crisp, thick, brittle, tender stalks of an aromatic or nutty flavor, foliage very crumpled. About two weeks later than Golden Self-Blanching.

Golden Heart or Golden Dwarf—130 Days

First class, medium height, white stalked, heart golden yellow, a very easy variety to bleach, a very popular variety to use between the Early Self-Blanching varieties and the late tall green sorts.

Golden Self Blanching American Grown—120 Days

By many thought to equal the famous French grown of this variety, although we do not consider it quite as pure a strain. One of the objections to this American grown seed is, that it produces a more vigorous and stronger plant which does not pack as well in the usual size crates which market gardeners use.

Golden Plume—115 Days

We hesitate to recommend something to take the place of Golden Self-Blanching, which is the most popular variety in America today, but here we offer something superior. This variety is an individual line selection from Golden Self-Blanching, is five to ten days earlier, produces a larger stalk, blanches much more easily, is a richer color, being creamy yellow and, lastly, it withstands blight much better. We look for it to finally replace the old standby, for undoubtedly it is a wonderful improvement.

White Plume—120 Days

This is a most desirable, early, handsome Celery; it is self-blanching to a great extent, consequently, among the earliest ready for table. When growing, it presents a very handsome and attractive appearance, the leaves are a bright green, with nearly white tips. Easy to bleach, fine flavor, solid, bleaches early.

Emperor—130 Days

A dwarf of superior excellence and very showy foliage dark green, to be at once noted because of its particularly upright growth of unusually thick stalks, very solid and large, no suckers, sixteen inches high, with edible stalks of half that height.

TURNIP ROOTED

Celeriac, Large Smooth Prague—120 Days

This plant is used for the large Turnip-like bulbs forming under the ground, the stems above ground are of no value except to use for flavoring. The seed should be sown and given the same treatment as any ordinary Celery, except it is not necessary to earth up the plants as is necessary in growing ordinary Celery. The roots can be readily kept till late in the Winter and are excellent for soups, stews or salads. Very popular in some sections of the country.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

SUGAR or SWEET CORN

First Introduced in 1830—Then One Variety.

One Pound of Seed to 100 Yards. Sixteen Pounds to the acre.
Seventy to Ninety-five Days from Planting to Edible Condition.

No one having a garden of over 150 square feet should be without a few hills of Sugar Corn. Picked a few minutes before eating is very much more luscious than any that can be bought in the grocery store. It deteriorates very rapidly, an hour's time making a great difference. In our opinion the best early corn, although not a Sugar Corn, is Landreths' Earliest Table or Early Beverly. The best early varieties are Crosby, Mammoth White Corey and Golden Bantam. The best medium early variety is Howling Mob; the best late varieties are Stowells Evergreen, Country Gentlemen and Landreths'.

Early Mammoth—75 Days

A most popular early, long, slim eared variety on the market today. Ears 7 to 9 inches long of 10 to 12 rows of excellent quality.

Howling Mob—78 Days

Ears about 7 inches long. Height of stalk 4½ feet. Large broad grains. A popular variety for sowing late in the Summer, as it ripens a little earlier than Stowell's Evergreen, and is not so liable to be caught by frost.

Landreths' Sugar—84 Days

Height of stalk 7 to 8 feet. Ears 8 to 9 inches long. Set low, large, and well filled. Two or three ears on every stalk. Grains narrow and deep, somewhat similar to Evergreen but smaller. Ears remain long in edible condition, which is a very great advantage.

	½ lb.	1 lb.	5 lbs.	10 lbs.
Early Mammoth.....	.25	.35	1.60	3.00
Howling Mob.....	.25	.35	1.60	3.00

| 5. Kendall's Giant or Mammoth White Corey | 6. Early Mammoth Sugar | 7. Country Gentlemen | |
| 8. Landreths' Sugar | 9. Evergreen Stowell's | 10. Late Mammoth | |

Sugar Corn was first introduced in Burlington County, N. J., in 1830.

General Sullivan, in 1779, destroyed 20,000 bushels of Corn at Genesee, N. Y. A few years later 1,200,000 bushels destroyed in the same place. In 1697 an Army was employed for three days destroying Corn. General Wayne, in 1794, wrote of the Indians in Ohio, "I never before beheld such immense fields of Corn." All these were field corn.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

SUGAR CORN—Continued

Landreth's Money Maker—100 Days

Late, consequently demands early planting. Best Sugar Corn in existence. Grains large, broad and shallow, set close on the ear, averaging 8 to 12 rows on the ear. Cobs long and thin; that is, less than half the diameter of cobs of other sorts of Sugar Corn. Produces never less than two attractive ears to the stalk, generally three, sometimes four and therefore well named. The stalks are unusually thick, stocky, and very stiff; consequently, rarely blown over by heavy winds. The plant is strong in foliage, very close-jointed, and rises to the height of 6 to 6½ feet. The ears remain in milky condition longer than any other variety.

Notice the Small Cob
Often not thicker than a man's finger

Nothing equal to it for sweetness and delicious quality has ever been served on our own tables. No sort under any other name is its equal. Don't let this escape your notice.

Golden Bantam—70 Days

Height of stalk about 4½ feet. Grains golden yellow, rather short. Ears about 6 inches long, generally 8 rows. Very hardy. It can be planted earlier in the Spring, in damper soil and colder weather than any other variety of Sugar Corn. Exceedingly sweet. When ready for the table use, it is a creamy yellow. Very popular everywhere, and growing in popularity every day.

Country Gentlemen—82 Days

Stalk 6½ to 7 feet. Ears slim, about 8 inches long. Grains, long and irregular, very narrow. Considered by many one of the best Corns for family garden. One of the most popular varieties used by Commercial Cannery. The silk on Country Gentlemen ears is always very red, and it can easily be distinguished by this feature.

Late Mammoth—87 Days

One of the strongest growers of the Sweet Corns, having stalks 7 to 8 feet long which usually produce two ears from ten to twelve inches long, with very white, tender sweet kernels. This late variety produces the largest ears of any of the Sweet Corns.

Long Island Beauty—85 Days

A large eared variety, having small tight grains. An excellent variety. It is a cross between Late Mammoth and Stowells Evergreen and retains the good qualities of each. Ears 9 to 10 inches long.

Mammoth White Cory or Kendall's Giant—75 Days

This is considered by many the best large eared early true Sugar Corn variety. Ears are 7 to 8 inches in length, usually ten rowed, with white grains of excellent quality. A superior early variety for any garden.

Minnesota Extra Early—71 Days

A very popular early sort, stalks about 6 feet tall, producing one to two ears 7 inches long, with eight rows of very broad white tender grains of excellent quality.

Premo—70 Days

One of the best early true sugar varieties, producing ears 7 to 8 inches long, 8 to 10 rows of white rather shallow grains of excellent quality.

SUGAR CORN—Continued

White Corey—72 Days

A first early Sugar Corn. Height of stalk $4\frac{1}{2}$ feet. Ears about 5 inches.

Black Mexican—78 Days

Stalks about $6\frac{1}{2}$ to 7 feet high. Length of ear about 8 inches. Usually 8-rowed. Dry seed black or purple, with flat grain. A second early variety. When young, kernels very white, exceedingly sugary. As sweet, if not sweeter, than Golden Bantam.

Bantam Evergreen or Golden Evergreen—80 Days

A second early, one of the latest introductions to the Sugar Corn family; by some, thought it will take the place of the famous Stowell's Evergreen. Height of stalk $7\frac{1}{2}$ to 8 feet, ears thick, 7 to 8 inches long.

Early Crosby—74 Days

Height of stalk about $4\frac{1}{2}$ feet. Ears 6 to 7 inches long. Grains amber color and very short. One of the most reliable for early gardens. Recommended as an opener for the season. Used almost entirely in northern localities on account of its earliness. Very popular variety with the Maine canners.

Early White Evergreen—78 Days

Height of stalk 7 feet. Slightly slimmer and shorter stalk than Stowell's Evergreen. Broad, vigorous green foliage. Ears about 7 to 8 inches long, with 14 or more irregular rows. Very deep, white grains.

Evergreen Stowell's—80 Days

Height of stalk about $7\frac{1}{2}$ to 8 feet. Ears about 8 inches long. Very white, deep, narrow grains, 14 rows on the cob. This is the standard variety of Sugar Corn, more of this Corn being sold than any other Corn. It is most popular for home, or market gardeners. Very productive and tender.

Golden Giant—78 Days

This variety is in reality an improved type of Golden Bantam, from which variety it was developed. The ears are 7 to 9 inches long, containing ten to twelve rows of grains which are long, broad and orange in color. Cobs very small. Is a very desirable variety, will, we feel, increase in popularity.

SWEET GARDEN—NOT TRUE SUGAR

Adams Extra Early or Early Burlington—64 Days

Height of stalk about 4 to $4\frac{1}{2}$ feet. Ears about 5 to 6 inches long, some set within 6 inches of the ground. Not a Sugar Corn, but a decided acquisition early in the season. Stands cold, damp ground better than Early Sugar Corn. Valuable on account of its hardiness and earliness.

Adams Early—68 Days

Height of stalk about $4\frac{1}{2}$ to 5 feet. Ears about 6 inches long. Very similar in every respect to Adams Extra Early, except a taller stalk, and 4 days later, and slightly larger and longer ear.

Landreth's Extra Early Beverly or Earliest Table—60 Days

A flinty grain which enables it to be planted very early in cold wet ground. Height 4 to $4\frac{1}{2}$ feet, producing ears within one foot of the ground. Is truly a valuable substitute as an early table variety, not a Sugar Corn, but a sweet table Corn of rare excellence. Very dependable and producer of quality.

Truckers' Favorite—80 Days

Similar to Adams Early in general appearance, but later. 7 to 8 feet tall. Ears 8 to 10 inches long, 12 to 14 rows—the roasting ear of the South—it can be planted earlier than Sweet Corns, for it can with stand the cold ground in early Spring.

Sow 15 pounds to the acre, or
about 1 bus., 56 lbs. to 4 acres.

FIELD CORN

THESE PRICES DO NOT
INCLUDE POSTAGE

No farmer or seedsman is offering a better or purer stock of Field Corn than Landreth's. With the exception of Hickory King and White Eureka, every ounce of Field Corn offered in this catalog will be produced within ten miles of Bristol, Bucks County, one of the famous corn counties of Pennsylvania. It is all grown from the best hand selected, tipped, and butted stock which we can select from the various fields which are being grown for us in the neighborhood. No Corn is superior, and few stocks offered, are equal.

Golden Dent

Snowflake

Bristol Early Yellow—100 Days

Height of stalk 8 to 9 feet. Color of seed light yellow or lemon, with a white top. Produces long, slim ears, exceedingly productive, very fine quality. 12 to 14 straight rows on white cob. Kernels broad and set very closely. Produces particularly well on poor ground. In some sections, called the Poor Man's Corn.

Early Canada—85 Days

Height of stalk about 7 feet. Kernels of a glazed yellow, considerably lighter in color than the Pennsylvania Long Yellow Flint. A very desirable Corn to plant in Northern Latitudes.

Eureka White—130 Days

This Corn is grown for us in Virginia. The strain which is very popular in New England for fodder or ensilage will not mature hard seed as far north as Pennsylvania. It produces a very tall, leafy stalk, is claimed by many to be the best fodder Corn or Ensilage Corn in the market, but we think the Snowflake better. Grains and cob white, rows usually regular. We recommend only for fodder or ensilage.

Golden Beauty—About 120 Days

Very showy. Height of stalk about 9 to 10 feet. Cobs 9½ to 10 inches. Grains very broad, deep rich golden yellow color. Cobs red, quite similar to Golden Dent, but the kernels much more shallow. Usually 8 rows. One of the handsomest and broadest grain Golden Dent Corns on the market.

Golden Dent—About 110 Days

Very showy. Named from its bright Golden Yellow color. Very prolific and an excellent Corn for anyone to grow. Height of stalk 10 to 11 feet. Ears 10 to 11 inches long. A large kernel, longer but not so wide as Golden Beauty. 14 to 16 straight rows on a red cob. Color of seed glossy yellow.

Leaming—105 Days

A very productive early red cob Corn. 14 to 15 rows. Ears 9 to 10 inches long, not so long as Golden Dent. Top of kernel bright, unglazed yellow, body of kernel dark yellow and glazed. Germ very pronounced. Extremely popular. One of the great fodder Corns in New York and Pennsylvania.

Lancaster County Sure Crop—110 Days

A dent—yellow on top, orange on sides, set close, resembles Golden or Yellow Dent, only ears are longer, early to ripen, 14 straight rows on a red cob. A good cropper, excellent to silo.—Very popular.

Old Cabin Home or Hickory King—125 Days

Height about 10 feet. Ears about 7 to 8 inches long, 8-rowed, straight, small diameter. Kernels glazed white and extraordinarily broad.

Penna. 8-Rowed Long Yellow Flint—90 Days

Height 9½ to 10 feet. Very early, often used to replant by farmers to assure them of getting ripe Corn before frost. Cobs red, slim, 11 to 12 inches long, always 8-rowed. Kernel flinty, hard.

Snowflake or Boon County White—120 Days

A pure white grain, dented crown. Height of stalk 10 to 11 feet. Ears have tendency to grow high on the stalks, 15 straight rows on a white cob. White glazed with dull white cap. Popular in the cotton states. This is the best ensilage Corn on the market. Will ripen in New York where White Eureka does not.

White Dent—120 Days

Very similar in all respects to Snowflake, except that all grains are dented, while Snowflake is inclined to have many gourd seeds.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

POP CORN

THESE PRICES DO NOT
INCLUDE POSTAGE

White Rice

Height of stalk 7 to 8 feet. 2 to 3 ears on a stalk. A handsome, very prolific variety of White Pop Corn. Ears 5 to 7 inches long. Grains long and pointed, somewhat resembling rice, from which it takes its name. This variety is considered the best variety of Corn for popping purposes.

Plain White

Height of stalk 7 to 8 feet, length of ear 5 to 7 inches long. Grain smooth and round. Not quite so popular as the Rice for popping purposes, but preferred by growers as it does not hurt the hands as Rice does when husking.

CHICORY or SUCCORY

Sometimes Called French Endive

Plant Four Ounces to 100 Yards of Row.

Witloof or Brussels Chicory—80 Days

The leaf resembling a head of Cos Lettuce, large, thick and stems tightly folded against each other, the heart bleached like Celery. Very popular in Europe and growing in demand in America.

Chicory—Large Rooted or Coffee

This variety should not be confused with the Witloof sort which is used as a salad, for this is but little used as such but is cultivated for its roots which when dry are used as a substitute for coffee.

COLLARDS

One Ounce of Seed to 100 Yards of Row.

A Loose-leaved plant of the Cabbage family.

A Hardy and Excellent Vegetable
for Winter Use.

Georgia Southern or Creole—80 Days

Cabbage greens. The leaves can be blanched white as Celery and made tender by enveloping from the top downward each plant with a large paper or muslin bag during its late growth. Stems long, 2 to 3 feet, white or golden, can be grown in sections where Cabbages do not thrive.

CORN SALAD—Sometimes Called Feticus.

Sow Ten Ounces of Seed to 100 Yards of Row.

Broad-Leaved (Large Seeded)—40 Days

Used as a small Salad throughout the Winter and Spring. For quick growing sow thickly in drills, cover slightly first of Autumn. Height 4 inches.

CRESS

Curled or Pepper Grass—40 Days

Cut leaved, used for flavoring and as a Salad.

Broad-Leaved—45 Days

Leaves not cut. A form of Salad much used abroad.

Water Cress—50 Days

A favorite dressing for dishes and a desirable form of Greens. Will only thrive well when the roots are submerged in water, grows best along banks of small running streams.

DANDELION

Cabbaging or Improved Thick Leaf—50 Days

An improved type of an old-fashion plant rapidly growing into favor as an early Salad, thick-leaved, dark green. Sow and cultivate same as Lettuce. Tie up the same as Cos Lettuce or shelter from light by inverted pots or board covering.

Golden Queen

Height of stalk 6½ to 7 feet. Two to three ears on a stalk. Length of ear 5 to 7 inches. Practically identical in every way to the Plain White, except that the grain is a golden cream color, which gives it somewhat of a field corn flavor.

Japanese or Australian Hulless

This is a dwarf growing sort, producing an abundance of very thick short ears 3½ to 5 inches long. These are closely set with narrow tight grains somewhat resembling White Rice. The grains are hulless which makes them when popped the most tender of any pop corn on the market. Once tried will never be discarded.

French Garden—45 Days

A good sort, but not so strong in growth as the Cabbaging, but much better than the common wild sort; not so erect, leaves broader, less curly and not so vivid a green, blanches easily.

CUCUMBER

THESE PRICES
INCLUDE POSTAGE

Four Ounces of Seed to 100 Yards of Row. Four Pounds to the Acre. Period of Maturity 50 to 70 Days from Sowing, According to the Season of the Year. A Good Crop Cannot be Grown on Thin Soil.

For early use plant in hills 4 x 4 feet, on a warm border, when the Cherry is in bloom and for a succession sow in drills at 5 feet when the Apple is in bloom. For pickles plant in August to get 3 to 4 inch fruit in September.

A good crop of Cucumbers, when gathered of pickling size, produces from 100 to 174 bushels to the acre. A bushel contains about 300 pickles. Some cultivators have claimed to produce over 100,000 pickles to the acre. The pickles should be slipped from the vine by the thumb and finger without raising or disturbing the vine.

Pickles properly prepared will keep five or six years. The method of salting pickles as pursued in New Jersey is as follows: To a cask of 120 gallons' capacity, take 4 quarts of salt, and mix in 2 gallons of water. Place the solution in the bottom of the cask and put in the green pickles after washing. To each 2 bushels of pickles put into the cask, add 4 quarts of salt and continue until cask is full. Place the head on the cask with edges trimmed off to permit of a rise and fall on the top of the pickles, and on the top of the head or lid place a weight of 20 to 25 pounds. If there should be any leakage of the liquor, replace it by a solution of 4 quarts of salt to 2 gallons of water, keeping all the pickles submerged. Salt should not be stinted. Pickle packers make three sizes before pickling—large, medium and small.

Boston Pickle—50 Days

A very productive variety. Very robust in growth. Dark green, and paling to light green at tip. Warty and black spined.

Chicago Pickle—55 Days

Sometimes called Westerfield Pickle. Vine vigorous, foliage broad. Fruit rounded form, choice green color with smooth skin and few spines. A very desirable variety for pickles.

Early Cluster—50 Days

An early sort. Fruit borne in clusters of two or three, from which it gets its name. The fruit is short, bright green, crisp and tender. Is good for slicing as well as pickling.

Improved Long Green or London—70 Days

Vines very vigorous and productive. One of the

best, if not the best, variety for slicing and salting. A very shy seeder; consequently, hard to get farmers to grow for seed. A universal favorite and we believe more largely sold than any long green cucumber on the market. See photograph, page 52.

Long Green—70 Days

A variety listed by many seedsmen. Not quite so long nor slim as our Improved Long Green.

Landreth's Extraordinary White Spine

CUCUMBER—Continued

Jersey Pickling—60 Days

A short black-spined, productive sort, having the reputation of ripening better than any other variety and of holding its color. Early Spring sowing will develop fruit of pickling size 2 to 3 inches, in 60 days. Good green color at stem, and paling to light yellowish green at tip. Distinctly showing 9 ribs with warts, and black spines.

Klondyke White Spine—70 Days

A handsome spine, medium early. Very dark color and an excellent slicer. Fruit often grows 8 inches in length and usually of uniform shape. Color is very dark green slightly striped with white at ends. Hot sun does not seem to affect this Cucumber as much as some others.

Long Green Turkey—80 Days

A shy producer of seed but highly recommended to all who put up their own pickles. Fruit is long, dark, slim, showing a tendency to make a small neck at the stem end.

Short Prolific or Green Prolific Pickle—50 Days

A short-vined, short-fruited, productive variety, producing fruit for pickling in a comparatively short time. Black Spine, an abundant bearer, highly recommended for pickles, for which it is used by many of the most famous pickling establishments. Short vine admits planting in rows as close as 2½ feet.

Early Fortune White Spine—70 Days

An early long, slim, well-shaped white spine, of a deep green color, retaining green color longer than most other sorts. Very productive. The quality sold by Landreth is not surpassed by any other Cucumber bearing this name. Very choice and of celebrity as a shipper. One of the best; try it with the utmost confidence.

	Pkt.	Oz.	¼ lb.	Lb.

Arlington White Spine—see next page

Improved Long Green

White Spine Arlington—70 Days

A cucumber that for years was the standard of perfection of White Spine types. It is grown extensively by market gardeners and is equally desirable as a family garden sort. Fruit long, slim and attractive, thicker than Early Fortune, same diameter all over, rather chunky.

White Spine Davis Perfect—70 Days

Here we have a Cucumber of intensely dark skin, green, a shy producer of seeds. Flesh very white. Fine for slicing. A most desirable variety for both family and market garden cultivation. Always dark green skinned and smooth, showing its hothouse origin.

White Spine Landreth's Extraordinary—70 Days

So very superior in every particular to the ordinary stock of White Spine as not to be classed with it, either in quality or price. Vine a strong grower, foliage broad leaved, deep green, close-jointed. Does not sunburn. Blooms early and sets fruit in every blossom; consequently very prolific. Fruit 3 inches long. Gherkins or pickles can be gathered in 50 days. Large fruit of fine color for slicing can be pulled off in eight weeks. An extraordinary fine variety of White Spine. Unsurpassed as a shipping Cucumber, hence its name.

Always Green—70 Days—It stays green

The greenest of the Long White Spine Varieties. Hardy, large fruited, excellent shape, that is, uniform from end to end. Of extended or long drawn out period of picking and of very favorable reputation among Market Gardeners. Always to be picked out in a competitive trial as one of the best. Used most extensively in Florida to ship North.

Snow's Prolific Pickle—52 Days

In appearance of fruit a variation of the "Short Prolific Pickle," but considerably longer in vine than "Short Prolific," which was given its name because of its exceedingly short vine. The fruit

Snow's Prolific Pickle—Pickling Size

of "Snow's Prolific" is more uniformly even in diameter from end to end, small, early, dark green, both ends blunt. The "Snow's Prolific" has a reputation of being more productive than any of its class and in every way suitable for bottling, consequently used to a very large extent by the best pickle houses. It is really a famous variation. The seed of "Snow's Prolific Pickle" is more universally used than any other pickling variety. Our stock is selected with the greatest care.

Gherkin, Burr or West India Gherkin—50 Days

A round, prickly Cucumber. Used for pickles only. The seed gets very hard; consequently, before planting, it should be soaked well as it takes it so long to sprout under ordinary conditions. Form of fruit resembling a horse chestnut burr.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

EGG PLANT

THESE PRICES
INCLUDE POSTAGE

Two Ounces of Seed to 100 Yards of Row. Matures for Table in 120 Days After Sprouting.

In this fruit, we have one of the finest garden fruits on the market. Plants are a little difficult to raise, owing to the fact that the seed germinates slowly and should always be started in a hotbed, or on a window ledge. After the plants show two rough leaves they should be transplanted 3 to 4 inches apart to give them room to develop, so that after they have gotten sturdy they can be planted in the open garden. If the ground is rich with proper fertilizer and with care, it will not be difficult to produce first-class fruit five to six inches in diameter.

About 4,000 plants are required to set an acre. The plants will produce an average of 4 to 5 fruit—sometimes 10—weighing 5 to 6 pounds. Our selection of seed is taken from the best fruit that can be grown and we have no hesitancy in recommending our seed as unsurpassed. Years ago, the vines of all varieties of Egg Plant had spines, or thorns, but by constant selection, the growth of Spines have all been eliminated,

Landreths' Large Round Purple—130 Days

This selection is decidedly the best type of Egg Plant that we have been able to secure after many years of selection. It is productive and vigorous, the fruit often reaching a weight of 10 to 12 pounds. Fruit may be described as chunky, broad at the bottom, and flattened—

diameter nearly equal to the length. Color when grown on soil of proper quality a deep purple, often appearing almost black, although not as black as the Black Beauty. The soil has much to do with the depth of color. Single bushes of this variety on good soil often reach a diameter of three feet, and produce 8 to 10 large fruit.

Landreths' Large Round Purple

Black Beauty—125 Days

This variety is earlier than the Landreths' Large Round Purple, but it is one-third smaller. Just as good and claimed to be a quicker seller in the market owing to the fact that the color is black, and it does not lose its color. Do not confuse the Black Beauty with the old Black Pekin as it is twice as large.

Florida High Bush—130 Days

We cannot recommend this variety nearly as highly as we do the Landreths' Large Round Purple, or Black Beauty, although it is very popular in the Southern States. The fruit is not as large nor as round as the New York Improved. Vines considerably taller, more vigorous, and a continuous bearer.

New York Purple—130 Days

This is probably the oldest and best known variety on the market today. It is early and produces four to six very large fruits of excellent quality. We list it as we have demands for it, although we prefer any one of the other three varieties listed here.

Seed buyers are on the safe side if they buy from well established dealers, but are on the unsafe side if they purchase from dealers of little reputation.

This is recognized in the purchase of one thousand other things, and there is no reason why it should be different with Seeds, as Seeds it must be remembered transmit their qualities, be they good, bad or indifferent.

The disappointments with bad Seeds are not only in the case of unvital Seeds, that is Seeds which grow say only 50% or less, but in the variations of kinds intended, as a late sort for an early sort, a stringy for a delicate or tender sort, a variety deficient in sugar, a sort early to decay, a sort of no productive quality. Any of these or many more defects may ensue, breaking up the gardener's designs for his garden.

Before purchasing your Seeds ascertain whether the party from whom you purchase cultivates or owns a Trial Ground; this is most essential if one wishes reliable Seed.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

ENDIVE

THESE PRICES
INCLUDE POSTAGE

Two Ounces of Seed to 100 Yards of Row. Three Pounds to the Acre.

Sow in the Spring as soon as the earth is free from frost and replant to within 60 days of Autumn frost. Drill in rows 2 feet, and thin the plants to 8 inches apart. Tie up the loose leaves or cover with a pot to blanch the salad. This is one of the most palatable Vegetables which can be used as a salad as well as a garnish to table vegetables. Endive, when grown properly and bleached with care, is one of the best salads that can be grown. Few people appreciate its value until they have eaten properly bleached Endive grown by a gardener who knows his business.

Broad-Leaved Batavian or Escarolle—30 Days
Foliage broad and flat—deep green leaves with thick midrib, that is exceedingly palatable when well bleached. Stands dry weather better than any other sort of Endive. We believe that this variety is unsurpassed for salad when it is bleached by an experienced gardener.

Giant Green Curled or Ruffick—30 Days
This variety is sometimes called Oyster as in the Eastern States where Oysters on the shell are exhibited, it is frequently used as a garnish to display them. This is a hardy growing variety, with deep green leaves. When tied up these plants of red

footstalks bleach white very quickly. It is a great favorite with those who desire a curly Endive.

White Endive—35 Days

A variety of White or light-colored leaves. More delicate than the large green curled. Less astringent than the green. Is slightly easier to bleach than the green curled. Used extensively for a decoration as well as a salad.

	Pkt.	Oz.	¼ lb.	Lb.
Broad Leaved.....	.10	.15	.50	1.50
Giant Green Curled.....	.10	.15	.50	1.50
White.....	.10	.15	.50	1.50

Endive can be eaten uncooked in salad forms or boiled like Spinach, a distinct flavor and very agreeable when bleached. It is of rapid growth, highly esteemed and may be sown, except in Winter, at all seasons of the year. The plants are of rosette shape and can be tied up and bleached pure white like Celery. Especially desirable as a Winter salad. Popular with Market Gardeners.

For Landreth Mixed Lawn Grass

See Inside Back Cover

Stable manure as a Fertilizer for the Vegetable Garden is most effective when put on at the rate of twenty tons broadcast to the acre, but stable manure cannot always be obtained; consequently, we recommend the commercial form of Nitrogen or Ammonia. That which can be generally obtained from a dealer or druggist is frequently Nitrate of Soda. The Soda is not a Fertilizer, but the Nitrogen is a stimulant; it is especially advantageous where there is wanted a vigorous growth of tissue, quite different from the foods of Wheat, Rye, Oats or Corn which need more Phosphoric Acid and Potash.

Nitrate of Soda is very quick in acting; it will cost about 8 cents per pound and not more than 100 to 150 pounds should be applied to the acre, nor should it be brought in close contact with any of the roots of young plants but kept out to the right and left, that is, on both sides three to four inches, as the rains will dissolve it, and in solution it will be carried to the rootlets but, applied directly to them, will kill them dead as a mackerel—it must not be brought in contact with the foliage as it will burn like common salt.

Order and system are necessary for a Garden to be satisfactory—Peas, Beans, Corn and some other

large growths should be in rows of 2½ feet apart and smaller vegetables as Carrots, Beets, Parsnips, may be planted in wide beds the full length of the Garden. The beds are made by laying out alleys or path-ways on both sides of the bed, the bed may be 20 yards long or 100 yards or more. Be certain to keep alleys or path-ways clean, for if the alleys are checked up with weeds, all pleasure in that Garden is lost.

Q.—What is the reason I have so much trouble in growing good cabbage? I get the very best seed I can purchase and make my seed bed just as rich and fertile as possible, yet the plants do not grow or head well when put out in the field.

A.—Your question, perhaps, answers itself, for you say you grow your plants on a rich and fertile seed bed, and that is where the difficulty probably comes in. Plants should never be grown on a richer soil than that to which they are to be removed, otherwise they at once upon transplantation become starved and in ill health. Moved from a poor seed bed to a field richer than the bed they at once become invigorated and healthy.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

HERBS (ALL AROMATIC)

THESE PRICES
INCLUDE POSTAGE

Two Ounces to Ten Yards of Row. Picking in 50 Days

These impart a strong, spicy taste and odor, and are used in various culinary operations. Those marked with an * are perennial, and when once obtained may be preserved for years. Of such sow the seed very carefully in seed-beds about the middle of Spring, and in the ensuing Autumn or Spring transplant them to convenient situations. The others are annuals, or such as come to perfection the first year and die. The seed of these may be sown carefully in shallow drills, middle of Spring, and when the plants are up a few inches thin them to proper distances. To preserve for use, dry thoroughly, rub the foliage almost to powder and put in jars or bottles and cork tightly.

Borage—60 Days

2 to 3 feet high, coarse growth. Cucumber flavor. Flowers star shaped, blue. Foliage very fuzzy. Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.

Caraway—60 Days

1 $\frac{1}{2}$ to 2 feet high. This herb is cultivated for its seeds, which are used in confectionery. Fine green foliage, similar to carrot. Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.; lb., \$1.25.

Coriander—60 Days

Seeds used for flavoring liquors, and for confectionery. 24 inches. Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 25c.; lb., 75c.

Dill—70 Days

The seeds used in flavoring preserves very largely, also for flavoring pickles. Plant small, feathery; flowers like a mixture of Fennel and Mint. 12 inches. Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 30c.; lb., \$1.00.

Fennel Sweet—60 Days

Thick set. Tall. Leaves large and finely cut, the plant almost forming a head with a wide, straight interior. 24 inches. Seed head shape of a Parsnip, very small foliage resembling Dill. Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 30c.; lb., \$1.00.

Lavender—60 Days

Height about 24 inches. Seed slow to germinate. Used for scenting clothes. Pkt., 10c.; oz., 35c.; $\frac{1}{4}$ lb., \$1.00; lb., \$3.25.

*Sage—70 Days

Long leaves, gray or silvery in color, strong grower; used for seasoning. Produced in profusion. 12 inches. Pkt., 10c.; oz., 40c.; $\frac{1}{4}$ lb., \$1.15; lb., \$4.00.

Summer Savory—60 Days

Used for flavoring, fine foliage, flowers small purple. Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 55c.; lb., \$1.75.

Sweet Basil—60 Days

Tall, light green. Very aromatic. Used for seasoning. Very productive in foliage. 18 inches. Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 60c.; lb., \$2.00.

*Sweet Marjoram—70 Days

Small foliage, mouse-eared. Shoots used for seasoning. 18 inches. Pkt., 10c.; oz., 30c.; $\frac{1}{4}$ lb., 90c.; lb., \$3.00.

*Thyme—70 Days

Used for seasoning. Small wiry foliage. Dark dull green. 8 inches tall. Pkt., 10c.; oz., 40c.; $\frac{1}{4}$ lb., \$1.15; lb., \$4.00.

KOHL-RABI

One Ounce of Seed to 100 Yards of Row. Two Pounds to Acre. Fit for Table in 60 Days

This plant, used both for table and for cattle feeding, is a Cabbage in which the cultural development has been directed to the stalk, not to leaf. The enlarged stalks take the globular form of Turnips. They are in season during June, July and August, or at periods when Turnips are not good. Try them when the balls are no larger than a silver dollar. They will be found very choice.

The Kohl Rabi is a turnip shape swelling of the stem, in the shape of a ball, the size of a large orange—this occurs near the surface of the earth—these balls when the size of an egg make a very excellent vegetable having the combined flavors of Cabbage and Turnip. They are excellent in dry weather when Turnips are fibrous and hot.

Green or White—Large Rooted—80 Days

A field variety for cattle, three times as large as the table sort.

White Vienna, 60 days

Very choice stock. Short-leaved, bulb light green, very rapid in growth, early in maturity, fine in texture when used young, not over two inches and symmetrical in form.

Purple Vienna, 60 days

The bulb of this variety is purple. It should be cooked when not over two inches in diameter. In maturity it develops for use with the White Vienna.

KALE OR BORECOLE

THESE PRICES
INCLUDE POSTAGE

One Ounce of Seed to 100 Yards of Row. Four Pounds to the Acre.
About 50 Days to Produce a Crop Suitable for Cutting.

This is a very valuable plant for greens. A curly loose-leaved plant of the Cabbage family, of hardy character and succeeding on almost any soil.

Sow in the early Spring when the Oak is in full leaf, again in the early Autumn. Drill in rows of 2½ feet and thin to 8 to 10 inches, according to vigor of variety. It is a great favorite in the Southern States and is grown very extensively at Norfolk, Virginia, for shipment to the Northern markets during January and February.

Bloomsdale—50 days

A superior sort, being very curly, very dark green, so short stemmed that it rests practically on the ground, broad spreading and far denser in foliage than any other sort. Plants broader than a bushel basket and seeming to hug the earth. More hardy than Dwarf Curled Scotch, passing unharmed through the severest winter as far north as Philadelphia. 9 inches high. Why continue to grow the Yellow Green Curled Scotch Kale or the Blue Green Flat-leaved Dwarf German Kale, often

termed Philadelphia Kale, when the so superior Bloomsdale Kale can be grown at no greater expense? The Bloomsdale is not a sickly yellowish green as is the Scotch Kale, but a bluish green. The Bloomsdale Kale is more hardy than the Scotch Kale, retaining its good color after cutting and throughout days of transportation, bringing more money when put upon the market because it is more attractive and appears to be fresher all the time because of its darker color. The plants when given time grow as big as a bushel basket, covering the earth in a most remarkable manner.

Dwarf German or Siberian.....	.10	.15	.35	1.00
Spring.....	.10	.10	.20	.50

Dwarf Curled Scotch or Norfolk—55 Days

A very favorite sort for garnishing. Foliage yellowish green, very finely curled. An excellent variety of spreading habit, short stalk.

Philadelphia Dwarf German, Siberian or Imperial—60 Days

Foliage flat, broad, curled on edges, blue, hardy. Stands a most rigorous Winter. Very vigorous, large leaves, comparatively plain, frequently grown for forage. In some sections, called Sprouts.

Spring—30 Days

This is a smooth leaved variety very often planted for table greens and as a feeding crop for pigs and cattle.

Q.—What is a culinary vegetable?

A.—It is a plant producing, above or below ground a development of edible tissue, as the bulb of a turnip, the enlarged stalk of a kohlrabi, the head of a cabbage or the half abortive or abnormally developed buds of the cauliflower. A culinary vegetable generally requires cooking to fit it for human food, but not always, as exemplified in the radish, lettuce, cress. A culinary vegetable in the exact sense cannot contain seeds, as it is a product developed previous to inflorescence.

Bloomsdale Kale

Vitality Tests

Every season in our Greenhouses we make in earth about 30 thousand tests of the Germinative Power of the Seeds used in filling orders. These tests are made of each lot of Seed received at the Warehouse, no matter from what source, and repeated again three months later. All these tests are entered in a separate vitality book.

Leek

LEEK

THESE PRICES
INCLUDE POSTAGE

Two Ounces of Seed to 100 Yards of Row. Four Pounds to the Acre. Ninety Days from Germination to Edible Condition.

Sow when the apple is in bloom and again in midsummer. If for permanent position, sow in rows of 2 feet; if for transplanting, sow in close beds. To secure a full development, thin out the rows or plant the seedlings at 3 inches apart in the row. Upon the approach of hard frost take up the plants and preserve in trenches the same as celery. Yield from about 100 to 150 bushels to the acre.

The Leek in common language may be said to be a cousin of the onion—in flavor it is quite similar. While the onion grows best on dry lands, the Leek flourishes where there is more moisture. The Seed is generally sown in a Seed bed and subsequently transplanted to a more permanent location. It is a strong feeder, frequently growing to twice the size of the largest onion. The edible portion is not the root but an extension upward of the stalk which is bleached like celery, sometimes quite up to a length of twelve inches.

Carentan, 85 days

Very superior, large rooted, broad leaved. Very hardy.

Large London or Flag, 85 days

Scotch or Broad Flag—an old standard variety with recurved leaves.

Musselburgh, 85 days

A remarkably large and showy variety. Leaves broad and flat. Very popular.

	Pkt.	Oz.	¼lb.	Lb.

Sugar in Vegetables

Q.—How is the percentage of sugar in vegetables influenced by locations of latitude?

A.—All vegetable garden products, as peas, beans, corn, parsnip, carrot, beets and melons, become more palatable as their cultivation approaches more nearly the northern limit of their successful growing. This may be attributed to the longer daylight in Summer in Northern latitudes. Good form and rich color do not always accompany palatability; quite the contrary, as some of the most exquisitely flavored apples and melons of Nova Scotia do not compare in appearance with those produced in localities much further South. The use of the electric light at night in gardens will some day, no doubt, become quite general where facilities for its use exist, as by its use can be obtained all the advantages, and more, afforded by the long twilight of a more northern latitude.

Sugar Corn

Q.—Which varieties of Sugar corn most rapidly pass beyond the edible condition, that is to say, harden the most quickly?

A.—The eight-rowed sorts remain the least time in edible condition, as the grains are not compact on the cob. Such loosely covered cobs quickly lose their moisture, and the grains their juice and palatability because of the extraction of their moisture in the drying of the cob.

Sugar Corn from one Seed House may produce ears within two feet of the ground and two or three of them to the stalk and only sixty days from the time the Seed peeped through the earth, while the supposed same kind from another Seed House may produce ears five feet above ground and only one to the stalk and eighty to ninety days later, the difference between a loss and a profit.

The processes of observations are substantially the same with all other vegetables, each in its season, but in the case of Beets, Carrots and other like products, the roots are cut across so as to show interiors of color and texture for comparison, while with Watermelons and Cantaloupes after vines and outer skins are examined the interiors are criticised as respects flavor, color and texture.

LETTUCE

THESE PRICES
INCLUDE POSTAGE

Two Ounces of Seed to 100 Yards of Row. Three Pounds to the Acre.

Forty to Fifty Days to Edible Condition.

To have fine Lettuce in early Spring, sow in seed bed in the September preceding, protect the plants during the winter by a box covered with window sash or with litter. Early in the Spring transplant half into rich ground. The other half force to an earlier development under the sash. Or in early Spring, sow in a hot-bed and transplant, but Autumn-sown plants are best. For a later supply, sow in drills when the Cherry is in bloom; when up a few inches, thin out, leaving plants at proper distances; this is a better plan than transplanting late in the season. For this purpose use Landreth's Select Big Boston, a variety selected as a standard sort by reason of its ability to resist heat and the longer time it is in condition for the table than some other sorts which shoot to Seed as soon as the head is formed.

CUTTING OR LOOSE-LEAVES SORTS

Black Seeded Simpson—40 Days

Black Seed. A standard American variety found in all catalogs. Crisp, yellowish green leaves of large size, grows very quickly, of fine quality. The flavor is excellent; it is the most popular of all the loose leaved sorts. Color of leaves a whiter yellow than White Seeded Simpson.

Curled Simpson or White Seeded Simpson—40 Days

One of the best known and most generally used of the Curled American varieties, of excellent quality, a quick growing, non-heading, crisp sort; leaves light green, crumpled, very similar in appearance to Black Seeded Simpson, only a more golden yellow.

Curled Silesian

Similar to Simpson, quite as durable, and a favorite. White Seed.

Golden Curled—45 Days

White Seed. A golden-leaved sort, producing a small head of rare excellence, leaves much fluted on the edges—is a curled, crisp variety, loose, long and pointed. When fully matured the leaves are quite yellow and very attractive.

Grand Rapids—40 Days

Black Seed. One of the leading American non-heading varieties. Curled, crisp, light green, leaves wavy, very much fringed and curly, cultivated extensively in the West under glass. Is very tender when forced and of fine quality, is difficult to germinate and planters often condemn the Seed as being unvital when it really has a germinative force of 95 in 100.

Prize Head, Satisfaction or American Gathering—40 Days

White Seed. A variety used very extensively in some sections of the United States. A curly, non-heading crisp sort, of medium size with light bronze on the edges. A very rapid grower.

Landreth's Extra Select Big Boston

HEADING VARIETIES

Big Boston, Landreth's Extra Select—50 Days

Heads creamy white whether grown in open garden or under glass. Very large, slightly tinged with reddish brown, solid and uniform. White Seed. Seed saved from a selection better than that producing the ordinary stock of Seed. It has a high reputation in the market-gardening sections of Texas and Florida. The most general used variety. We advise all to plant this excellent strain of Big Boston.

Big Boston Extra Select10	.20	.70	2.25

LETTUCE—Continued

Big Boston—50 Days

White Seed. Popular as a reliable and uniform header; in Europe is generally known as "Trocadero Cabbage"; is a Cabbage head, butter typed, finely shaped, globular, medium, light green with a slight tinge of bronze on the margin of the outer leaf—leaves smooth, practically no blisters, very hardy and an excellent shipper. The sales of this variety are only exceeded by possibly one other variety.

Brittle Ice—55 Days

White Seed. A strong grower, forming a very large conical, tightly folded head. Its color is distinct, being grayish light green throughout. Is of excellent quality, being crisp and tender. A good shipper.

Brown Dutch—50 Days

Black Seed. A Cabbage butterhead, medium size, dark green, smooth leaves with deep bronzed edges. A very buttery, strictly cabbaging heading sort of excellent quality.

California Cream Butter—55 Days

Black Seed. A sort sometimes called "Royal Summer Cabbage," thick, large leaves, dark glossy green, tinged with brown and spotted, of first-class quality, forms good solid head and is a good shipper.

Hanson—45 Days

White Seed. One of the standard varieties of many years, leaves curly with fringed edges, folded so tightly as to make an attractive white interior, very crisp, medium size, light green leaves, heat resisting. Very popular with both kitchen and market gardeners.

Iceberg—50 Days

White Seed. A curled heading, medium large, crisp, green variety, edges fringed and tinged with brown, a sort having outer leaves of strong ribs, enclosing an exceedingly crisp and white interior—crisp as ice

May King—45 Days

White Seed. Producing a Cabbage-like head, round and solid, medium size, light green, slightly tinged with brown edges. Is an early and quick grower, extremely good for outdoor culture. A good shipper.

New York Green, Wonderful or Los Angeles, 60 Days—Erroneously called Iceberg.

White Seed. Possibly the most sought after Lettuce in the market today, certainly the most talked about, grown in California and Colorado by the thousands of acres, is the crisp, hard Lettuce which is served so extensively on dining cars and in hotels and restaurants. It is a crisp, large heading variety, dark metallic green and slightly curled on the edges, produces the most solid or compact head of any Lettuce in the market.

Salamander or Black Seed Tennis Ball—55 Days

Black Seeds, forming a large size, light green compact head with a white heart, very tender and

crisp, extremely slow to run to Seed, stands heat, one of the most popular American varieties. The sun cannot be too hot for Salamander as it is one of the best, if not the best, heat resisting Lettuces in the market today.

COS LETTUCE

Green Cos—55 Days

White Seed. Americans familiar with European travel have been delighted with the long, spoon-shaped, narrow leaved Lettuce served everywhere and termed Romain at the hotels, but upon their return home they have not found the Romain in the American markets. Yet, if they have home gardens, they can grow it themselves to as perfect a condition as observed abroad.

Paris White Cos

LETTUCE—Continued

Paris White Cos Trianon or Romain—55 Days
White Seed. This variety, maturing for table in seven weeks from germination should be found in every vegetable garden as it is a thoroughly reliable Lettuce. A strong grower and very productive with long, shell-shaped leaves of most excellent quality. It is a self-folder, but when the plant is over half grown, it is best tied up with a soft string or a wisp of grass that the inner leaves may be blanched perfectly white, in which condition they are more crisp

and decidedly more palatable than varieties of a Cabbage-heading habit. It is a mystery why it does not displace them, especially as a given amount of ground will produce more than twice the amount of edible leaves than can possibly be obtained from any round-head.

Pkt., 5c. oz., 15c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.50.

There are a number of Cos Lettuces; none superior to the white and green—very quick and hardy.

In Europe the entire leaves, the shape of a rabbit's ear, are eaten "out of hand" as they call it.

MUSTARD

THESE PRICES
INCLUDE POSTAGE

Five Ounces of Seed to 100 Yards of Row. Four Pounds to the Acre.

In the Spring, when the Pear is in bloom, drill in rows 1 foot apart. To have a succession the sowings should be made every two or three weeks till October. Cut young; when old the flavor is strong. Once sown, certain to perpetuate itself.

Black or Brown—30 Days

Used in the garden by those who do not know the advantage of the large leaved varieties. Seed brown. Shoots to seed early.

Bloodsdales Large-leaved—35 Days

Producing, when fully grown, immense leaves which are as long and as broad as the largest Tobacco. These same leaves when size of a man's hand are very tender and admirable as a salad. The leaves when twice that size we recommend for boiling as Spinach. This plant should have a place in every Southern garden. An immense amount of edible and crumpled material can be raised in a very limited space.

Chinese Mustard—45 Days

We see no room for this sort for it is nothing more than the mother variety from which Bloodsdales Large-leaved was selected and bred. It is inferior in many ways to that variety but we list it as there is a demand for it from those who have not tried Bloodsdales Large-leaved.

Giant Southern Curled or Creole—35 Days

Leaves large, yellowish green, much crumpled on the edges and very popular in the South. The most popular Mustard on the market today but not equal to Ostrich Plume. Much more in demand and more productive seeder than the Ostrich Plume.

Ostrich Plume—40 Days

This sort was named and introduced fifty years ago by the Landreths and is recommended as the best Mustard in cultivation today for it is more delicate, curly and ornamental than the Giant Southern Curled, and shoots to seed much more slowly than any other sort. It is sometimes called Fordhook Fancy. The light green, long plume-like leaves very distinct and borne in profusion. As it is a very shy seeder the seed is more expensive than other sorts, which has led some Seedsmen to substitute Giant Southern Curled for the same.

White or Yellow—30 Days

Seeds white and larger than the Brown, similar in habit to Brown, but shoots to seed too early to be valuable. This with blending Brown is what is used to make Commercial Mustard, used on the table.

Cow Pea. Q. Is a Southern cow pea, a pea or a bean?

A. It is a bean; the outward and unscientific distinction between peas and beans being that, as a rule, beans have fleshy edible pods, distinctly marked eyes, smooth surface, and of a far greater variation of color than peas.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

MUSKMELON or CANTALOUPE

Three ounces of seed to 100 yards of row. Four pounds to the acre.

THESE PRICES
INCLUDE POSTAGE

Cantaloupes, or Citrons, as they are termed in New Jersey, do well upon sod ground or upon land prepared for planting by plowing down a crop of Winter Wheat, or Winter Rye, the sod or straw aerating or keeping loose the soil. No plant is more influenced by the conditions of its growth.

The seed should be planted after corn seeding time or shortly after the apple is in bloom, the hills about $4\frac{1}{2}$ feet in every direction; two shovelfuls of well-rotted stable manure being trampled into each hill and covered with earth.

Cantaloupes and Cucumbers are often destroyed by lice. A partial protection is to spray the leaves with Bordeaux Mixture. Cantaloupe vines frequently are blighted by early morning fogs, the leaves appearing afterward as if a flame of fire had passed over the fields.

Anne Arundel

GREEN FLESHED VARIETIES

Acme or Baltimore—70 Days

A Melon of high repute in Baltimore, where it is known as the Baltimore Citron. It is showy, green fleshed, pointed at both ends, nutmeg shaped, ribbed and strongly netted, which fits it for shipment, the netting protecting it from injury.

Anne Arundel—70 Days

A thick, oval melon, a large selection from the Acme, flesh green, sugary, netted and ribbed, and very valuable for family use.

Extra Early Hackensack—65 Days

This Melon is 10 days earlier than the large old-fashioned Hackensack, deeply ribbed, coarse netted, flesh thick, of excellent flavor, flesh green and skin green, slightly tinged with yellow. Nearly round, somewhat flattened in shape. One of the old standbys.

Honey Dew—85 Days

This is a melon known in France as Antipes. Fruits round to oval with smooth, very nearly white skin. Flesh thick, light emerald green when first picked but creamy yellow after stored several days. It is best five or ten days after picking, when the flesh becomes creamy yellow. If picked when slightly green and put in a cool place it will keep from five to six weeks. This is the very popular melon served in Hotels and Restaurants in the late autumn after all other Cantaloupes are over. Best grown in Colorado and California where it thrives in a long season which is required to mature good fruits.

Jenny Lind Small—60 Days

A small early green fleshed variety, of unsurpassed flavor, much flattened at the poles. We believe this is still the best flavored of all Melons. Very little netting, shallow ribs, a large size button at the

blossom ends. Recommended for family gardening rather than for the market, as its small size is against it. This is one of the few varieties which has retained its reputation for years, is very hard to equal as to quality.

Knights Early or Sweet Air—70 Days

Green fleshed, of excellent flavor, by many considered superior to the Rocky Ford. Same general shape, but smaller, sometimes a perfect globe, completely netted, but not so well netted as Rocky Ford, light ribs, a good shipper, very popular in Maryland with the large grower.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

MUSKMELON—Continued

Large Hackensack or Turk's Cap—80 Days

Very large fruit, flattened at the poles, flesh green, a great favorite with the family gardeners. Its large size, however, is against it with Market Gardeners. It is the best flavored of the very large green Melons, very deeply ribbed and densely covered with a coarse netting. Extensively grown in some sections.

Rocky Ford—75 Days

Flesh light green. Fruit nearly round, small cavity. Netted all over and free from ribs. This is the greatest favorite in the market today, is more extensively grown than all the other Melons in existence. It varies in type and thickness of skin, according to the fancy of the grower. Is a medium early sort with practically no ribs and intense netting.

Rocky Ford—Landreths' Double Extra Select—75 Days

This seed is saved from hand-selected fruit and is far superior to the ordinary field picked strain of Rocky Ford. Flesh light green and of a delicate spicy flavor. Melons nearly round, very small cavity, uniform in size and shape, netted all over with a fine tracery, no ribs discernible. Our strain of Rocky Ford seed cannot be excelled by any strain in the market, no matter what price is asked. The Landreths' Double Extra Select Rocky Ford is known throughout all the Melon districts, and is in great demand. Three dollars a pound for choice seed is frequently paid by professional Cantaloupe growers, but it is no better than this.

Landreths' Rocky Ford Extra Select

YELLOW FLESHED CANTALOUPE

Banana—80 Days

A melon growing 16 inches long, $3\frac{1}{2}$ to 4 inches thick and distinctly tapering at each end. Lemon colored skin, pink flesh, of very fine texture and delicate flavor. To all who enjoy something out of the ordinary we strongly recommend the trying of this variety.

Defender, Burrells Gem or Ordway Pink—75 Days

A celebrated orange fleshed Melon, one of the best of the Rocky Ford Types. Fruit medium size, oval, showing a slight rib and covered with a grayish netting, the flesh is a deep orange yellow. Small cavity.

Emerald Gem—70 Days

A small, very early Melon, form globular, flattened at the poles, ribbed, netted, orange flesh, deep emerald green line under the skin. One of the best for the family garden.

Fordhook—70 Days

A thick orange flesh, small cavity melon, well ribbed and heavily netted. Flat at poles, resembles the Jenny Lind in many respects, except in color. Very popular in New Jersey.

Hearts of Gold or Hoo Doo—80 Days

An orange fleshed, medium sized, almost round shaped, good shipping variety. Fine netting extending over the whole surface, a fine highly colored melon of good shipping qualities.

Osage or Millers Cream—75 Days

Fruit medium size, oval, slightly ribbed, dark green in color, covered more or less with a shallow netting, flesh deep salmon color and very thick, very valuable for home consumption.

Pearly Pink—75 Days

This new variety is one of the best introductions in many years, for it is a sure cropper, of excellent quality and a splendid shipper. It is oval in shape, heavily netted over a dark green surface. Is larger than Rocky Ford, melons weighing close to six pounds and are very uniform in size, which together with its hard rind and splendid carrying qualities makes it very popular with the shipper. Flesh light pink in color, very fine texture and of superior flavor. Try it as something new.

WATERMELON

THESE PRICES
INCLUDE POSTAGE

Sow in hills 8 feet apart in each direction. 2 ounces per 100 hills; 3 pounds to the acre.

Watermelons do well upon sod ground or upon land prepared for their reception by plowing down a crop of Winter Wheat or Winter Rye, the sod or grain aerating or keeping loose the soil. When the walnut is in bloom, the seed should be planted in hills at 8 feet apart in each direction. Two large shovelfuls of well-rotted stable manure dug and trampled into each hill and covered with earth will help wonderfully.

The cultivator should be prepared with quite 4 pounds of seed to the acre, that there may be a reserve for replanting in case of destruction to the plants by insect depredations or beating rains. One vine alone to the hill should be allowed to retain perfection with 450 hills to the acre, that should produce 900 Melons. Much of the Melon seed offered throughout the country is the product of immature and deformed melons remaining in the fields after all the choice fruit has been marketed. Landreth's seed is from mature melons grown especially for seed and not gathered from fields after all the best Melons have been marketed.

Alabama Sweet—90 Days

Seed a creamy white, mottled with brown, an early, long melon, light green, thin, tough rind, with irregular stripes, good flavor, an excellent sort—grown very extensively in the South for shipping purposes.

Augusta Rattlesnake, Gypsy or Georgia—85 Days

Seed creamy white with black tips. Here we have an old Southern standby, an excellent shipper and ready seller. A long, large, bright yellowish green melon with irregular stripes of very dark green, the ground color marbled with a medium green. Flesh bright scarlet.

Bradford—85 Days

Seed creamy white, similar to The Joe Johnson of years ago, in shape and markings, long, color dark with darker wavy bands. Flesh melting and of excellent quality, some of them resembling the Florida Favorite in markings, but slightly darker green.

Halberts Honey—90 Days

Seed creamy white with brown tips, same as Kleckley Sweet, or a selection from it, about 20 inches long, oblong, form almost equally round at each end, rind dark green, sweet and unsurpassed.

Round Light Green Rind Icing—75 Days

Seed creamy white, one of the best melons on the market and a great favorite in some sections for its excellent quality; always of a good flavor, of a very thin rind, consequently not a good shipper. Fruit nearly round and a greenish-white, marbled or dotted, with light green veins. Fine for family gardens, highly recommended.

Florida Favorite—80 Days

A vigorous, very productive vine, producing large, long fruits which are dark green in color, with irregular mottled stripings of a lighter shade. Flesh very sweet, deep red in color and of excellent quality. Rind is thin but stands up well.

Thurmond Grey—very showy

WATERMELON—Continued

Excel—80 Days

Seed black and brown. This is an early and prolific bearer, color of rind deep green with occasionally a deep green stripe. Flesh deep red, solid and crystalline, and a fine flavor, ripened well up to the rind. A most excellent shipping melon. Average weight from 30 to 50 pounds, often 60 pounds under favorable conditions. A good keeper for 60 to 80 days, if not bruised.

Round Dark Green Rind Icing—75 Days

Seeds small and creamy white. The same as the Light Green Rind Icing in every respect, except color of rind.

Indiana Sweetheart—90 Days

Seed very dark, marbled with a lighter color, resembling the Round Light Icing, but much heavier and paler in color. Golden Green, ribbed at stem end with dark green tracing. A good bearer and a reliable shipper.

Irish Grey—80 Days

Color of seed all creamy white. A new Melon but badly named. Very popular as a shipper. Fruit long, oval, light gray color outside. Flesh bright red, free from hard centers.

Kleckley Sweet or Monte Cristo—80 Days

Seed creamy white, one of the most sought after Melons. No one has a more superior stock of this, very valuable melon, than the stock we are offering you in our catalog. Fruit oblong, about 20 inches in length, rind thin, and always a very dark green, early to ripen, flesh scarlet, sugary and crisp. This Melon, by reason of its thin rind, is not so well adapted for shipping as for home consumption, yet it is excellently tender, of an excellent flavor and texture.

Landreth's Long Light Icing—80 Days

Creamy white, small seeds, a good cropper, heavy and attractive, of very desirable quality, a very fine flavor, shape long, oval, tapering from blossom end, skin light green, flesh crystalline, undoubtedly one of the best melons on the market today, extremely sugary.

Peerless or Ice Cream—80 Days

Seed white. Not a good shipper, but one of the best for home gardens, fruit long, outside rind light green, finely netted, flesh very tender, crystalline.

Tom Watson—85 Days—illustration next page

White seed more or less marked with brown. A long, even, oblong, dark green melon, finely marked all over with a darker green tracery than Kleckley Sweet, slightly longer. Fine variety, flesh deep red, fine flavor, no core, often weighing 50 to 60 pounds, the most popular and the most used Watermelon for shipping purposes on the market today.

Thurmond Grey

Seed brown. A selection from Irish Grey but larger. Outside color lighter green. Wilt resistant. Slightly mottled, shape long, thin rind, no cavity, weight average 38 lbs.

Wonder—75 Days

In color it is like Kleckley Sweet. In size, it is long. It weighs sometimes up to 60 pounds. The color of the Seeds is white. The texture is fine. The flavor is very superior. In comparison it is most nearly like Kleckley Sweet.

Preserving Citron Red Seed

About 90 days. Seeds red and small. A round, small, light and dark green striped melon. Meat a greenish white, used for preserving only. Late to mature, very hardy, and a long keeper.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Tom Watson

OKRA OR GUMBO

THESE PRICES
INCLUDE POSTAGE

Twelve Ounces of Seed to 100 Yards of Row. Twenty Pounds to the Acre. Sixty Days from Planting to Maturity.

Plant the Seed when the apple is in bloom, or slightly before, in hills or drills; if in hills, plant 5 or 6 seeds, 2 feet apart and thin out to two or three plants in each hill, or in drills, 3 feet apart and thin out the plants to 8 or 10 inches between the plants. The Seeds are liable to rot if sown early in cold or wet ground and should be put in thickly to secure the requisite quantity of plants. Very rich ground is demanded by this vegetable. It is principally used in the South for soup, but it is excellent when stewed. Gardeners in the North make a great mistake in not planting some of this delicious vegetable. As easily cultivated as corn and produces a large crop. Gumbo soup made out of the Okra is unexcelled in delicacy and at the same time most health sustaining because of its mucilaginous character, being an offset to many other dishes not conducive to comfort.

Landreth's Dwarf Stalked Long Green Pod—50 Days

Although growing only 3 feet high this is a very strong, vigorous, very productive grower, sending out many branches. Leaves and pods are very dark green. Pods 5 to 7 inches long, slender, corrugated, very tender and of excellent quality.

Long White Velvet Pod—60 Days

Height of stalk about 3½ feet, pods greenish white, unusually long, perfectly smooth, often 10 inches long, very slim. Exceedingly productive.

	Pkt.	Oz.	¼ lb.	Lb.

Value in Seeds

The Value of Seeds is not shown in appearance. They may be clean, bright, plump, but **Worthless**. Seed buying is a matter of **confidence**. Confidence in the Seed Merchant on the part of the planter. The price of the Seed is of little consequence, the quality of the Seed is of great importance.

Okra—Short Stalked Long Pod

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

ONION

THESE PRICES
INCLUDE POSTAGE

Five pounds of seed to the acre to produce large Onions.

One-half pound of seed will sow a row of 100 yards to produce big bulbs; that is, to produce large Onions. 60 to 70 pounds should be sown to produce Sets depending upon vitality. No Onion seed can be superior to that offered by the Landreths.

180 Trials of Onion Seed—2 rows 20 feet long

RED SORTS

Southport Red Globe—130 Days

A very desirable main crop, purplish red, globe shaped, with a very smooth glossy surface, a large producer and an excellent shipper and keeper. The most showy because highest color. Very salable in the market. Grown very extensively in New England.

Red Wethersfield—110 Days

The standard red variety for many years and most popular in the East, where large crops have been grown for years for shipment. The bulbs are broad and flat. The flesh is a light purplish white. Very productive and an excellent keeper. The seed of this Onion is used very extensively for growing Onion Sets as well as large Onions.

IMPORTED VARIETIES

Bermuda Red—60 Days

The distinctive name of this variety is Red, but it is not altogether a red bulb—it is dashed with red on a straw-colored ground. Very early and flat. Mild flavor, resembling the White Bermuda in every way but in color.

Bermuda White or Yellow—60 Days

This flat, mild flavored variety is not pure white, but light straw colored. It is possibly two days earlier than Red Bermuda and is more desirable. The most grown of the three Bermuda varieties.

Crystal Wax—55 Days

Named by Landreths in 1888. A half globe sort, absolutely waxy, pure white and crystalline, extremely mild flavor, the best of its type. Very early, the earliest of the White Bermuda types, of great reputation in Texas. It is a very attractive Onion, both as a set and for the table.

Large Yellow Strasburg or Flat Danvers—110 Days

This valuable, widely cultivated yellow variety is the most popular variety for producing yellow sets, and cannot be excelled in this respect. The bulbs are large, yellow, flat, uniform in size, ripens

ONION SEED—Continued

early and is altogether a good strain of seed for producing a handsome, long keeping, well developed yellow set.

Ebenezer or Japanese—100 Days

An old yellow skinned variety, very popular at the present time for growing sets, which is its attractive quality. Its other merits are that of a most vigorous grower, a heavy yielder, far greater than from Strasburg and astonishingly good, long keeping quality.

WHITE SORTS

Bloodsdales Extra Early Pearl—65 Days

In many respects the most remarkable Onion under cultivation, growing with a rapidity of a summer radish. Nine weeks from sowing to maturity. The bulbs are pearly white, waxy, translucent, in form flat and broad, with a slight corrugation around the edges. Flavor mild, all astringent qualities eliminated. Can almost be eaten raw with the freedom of an apple. The keeping qualities of the matured Onions are very good, but the sets sprout very early, and should be planted in October.

Silver Skin or White Portugal—90 Days

A mild, pleasant flavored white variety, admirable for family use. Not so good a keeper as the Yellow or Red varieties. Bulb medium size, mild flavor, with greenish-white skin. Is about 8 to 10 days earlier than White Globe and matures where the White Globe does not. The small bulbs are nearly round, but flatten as they mature.

Southport White Globe—110 Days

A showy, mild flavored, large White Globe variety. Very solid, productive, a good keeper and possibly the best for setting of all White sorts, unsurpassed in uniformity, absolutely pure white. Used exclusively in all sections.

YELLOW SORTS

Prize Taker—80 Days

Mammoth Yellow Globe derived from the huge Spanish Onion, exhibited for years on the fruit stands

in Autumn. Very early, does well in light sandy soil. Very large producer and fifteen days earlier than the celebrated Southport Yellow Globe. A variety which will succeed under conditions where other sorts fail; consequently, highly recommended for the Southern states. Will make large Onions from seed in localities where others fail. This is a most valuable quality. It makes a solid, slightly oval, round bulb. It is a good keeper, twice the size of the Globe Danvers, and better. Produces much better Onions from seed in Pennsylvania, Maryland, Delaware and New Jersey, than any of the Southports. It will prove a valuable addition to any garden.

Yellow Globe Danvers—110 Days

An oval-shaped, straw-colored, long-keeping variety. The bulbs are roundish, of good thickness, and keep extremely well. A very popular Onion for the Kitchen and Market Gardener.

Southport Yellow Globe—115 Days

A very hardy and exceedingly productive yellow globe. Is more oval than the Yellow Globe Danvers, much larger, more solid and heavier. Mild in flavor and an excellent keeper.

Six pounds of seed
to 100 yards of row.

PEAS

100 to 180 pounds to
the acre.

Peas are among the first seeds that can be sown at close of Winter, the round seeded sort frequently being planted before sharp frosts are fully over. The drilling of Peas may be safely commenced before the Peach is in bloom or as soon as the land can be plowed, and continued at intervals up to within sixty days of Autumn frost, for the early kinds, or seventy days for the intermediate varieties, or eighty days for the late sorts. Late-sown Peas are never as productive as those sown in the Spring, and often are subject to mildew. Wrinkled varieties are more susceptible to cold or wet weather; therefore, cannot be planted as early. Landreths' Extra Early will be found to be the best for August and September sowings, because of its early ripening habit and its ability to resist mildew. The dwarf varieties may be drilled at 30 inches if cultivated by horse power, or 20 inches if to be hoed by hand. The varieties of medium length should be drilled no closer than 3 feet, and the tall growing sorts at 4 feet apart. The number of Peas in a row may vary from 15 to the foot, in the case of the very dwarf kinds, and 12 to the foot of the medium tall varieties, and 10 to the foot of the very tall kinds. Yield of Green Pods 100 to 300 bushels per acre.

This Company believes that the best smooth Peas for early planting are Landreths' Extra Earlies, or Alaska. For later planting, World's Record, Thomas Laxton, and Laxtonian. For later planting, Alderman and Prince Edwards, which is the best type of late Telephone. No garden should be without Peas. We, ourselves, prefer Landreths' Extra Earlies, Alaskas, or Bountiful to any Peas we can plant in our home garden, particularly if picked in the early state. We think they are the best flavored, and do not produce hulls like the skin of a grape as do all the monstrous Peas, and they are much more palatable. In our own private garden, we plant a succession of these Peas every seven days.

FIRST EARLIES AND EARLIES

Alaska or Earliest of All—55 Days

A green seeded extra early, vine 30 to 36 inches tall. Distinct light green foliage, pods, 2 to 2¾ inches long, containing 5 to 6 blue-green, small, slightly pitted to smooth seeds. One of the best extra-early Peas in the market, and a great favorite with canners and market gardeners, because a good stock of this variety matures all its pods at once.

American Wonder—60 Days

One of the earliest of the green wrinkled sorts. Vine 10 to 13 inches high. Very prolific. Pods of striking form, 2½ to 3 inches long, containing 5 to 8 tender sweet flavored Peas. Dry seed, green, wrinkled.

Bountiful—60 Days

An extra early Pea of fine quality. Height of vine about 30 to 36 inches. Seed large, green, resembling Alaskas, only one-third larger. The Peas ripen uniformly, pods about 3½ inches long, of the Telephone type, containing 7 to 8 Peas. A very fine Pea for market as well as for home or kitchen garden.

Gradus or Prosperity—62 Days

An extra early large podded, wrinkled variety, pods as large as Telephones, very showy, same shape as Telephones. Vines much stronger than Alaskas, delicious flavor. Height about 3 to 3½ feet. Vine similar in appearance to Telephones, pods very large, about 4½ inches long, pointed. Peas very large, of splendid quality, green color.

PEAS—Continued

Landreth's Extra Early

First and Best or Morning Star—55 Days

A white extra early. Very fine flavor. Height of vine, 30 to 36 inches. Very prolific. Pods $2\frac{1}{2}$ to $2\frac{3}{4}$ inches long, containing 5 to 6 good flavored Peas.

Landreth's Extra Early—52 Days

Oak trees may be Oak trees, but woodmen know that there yet remains much choice among them, and just so with Extra Early Peas. A critical gardener wants the best strain as respects earliness, size of pods, flavor, uniformity of ripening, vigor, and habit of the plant. All these desirable qualities can be obtained in the strain sold as Landreth's Extra Early. The best table Pea on the market. This type will produce Peas fit for table in 50 days, according to soil, and climatic conditions of the season of their growth. This Pea was introduced and named by the Landreths in 1823, and is the only Pea then used which has stood the test of 100 years. Just as popular today as it ever was. Height of vine $2\frac{1}{2}$ to 3 feet. Pods $2\frac{1}{2}$ to $2\frac{3}{4}$ inches

long, containing 5 to 7 medium sized smooth to pitted Peas of excellent quality. No variety of Peas has ever exceeded the Landreth's Extra Early in flavor.

Laxtons Superb—65 Days

A very hardy, productive, early, large podded variety which can be planted very early in the Spring as the Peas are almost smooth and will withstand the cold, wet weather. A superior quality for an early, large podded Pea. Called Early Bird in Baltimore.

Laxtonian—65 Days

Height of vine about 18 inches, foliage dark green, pods dark green, about 4 inches long, resembling Telephone. This is the largest, handsomest podded, dark green, dwarf vine Pea that we know of, growing more in favor every year.

Little Marvel—64 Days

Vine strong and vigorous, about 18 inches tall. Showy pods about 3 to $3\frac{1}{2}$ inches long, blunt ended. Seed large, green, wrinkled. A very fine productive, dwarf, sturdy variety. Popular with the home gardener.

Notts Excelsior—60 Days

An improvement on the American Wonders. Vines almost identical. One of the best early dwarf, wrinkled sorts, vines about 12 inches high, producing a good crop of well-filled pods about $2\frac{3}{4}$ inches long, containing 5 to 8 very sweet peas. Seeds green, wrinkled square at ends like American Wonders.

Pilot—62 Days

This is a smooth seeded sort, producing large green pods of the Gradus type. It can be planted as soon as the ground can be worked in the Spring, at the same time as Extra Early or Alaska and on account of this early planting will be in edible condition shortly after Alaska and before or quite as early as American Wonder. Peas of large size, tender and a good quality.

Premium Gems—65 Days

An admirable, very productive second early. Height of vine, about 20 inches. Pods about $2\frac{3}{4}$ inches long, 5 to 7 Peas in a pod. Standard sort used in large quantities because it is a very popular reliable Pea for the private gardener. Seed green, wrinkled, often flattened.

Pioneer—65 Days

When this variety was first introduced it differed from Laxtonian only in having a slightly lighter green pod, but at the present time the difference has been lost sight of and today both Peas are identical in every way. It is one of the largest green telephone shape podded variety on the market.

PEAS—Continued

Thomas Laxton—65 Days

An early, wrinkled variety. Height of vine about 3 feet. Vines darker than Gradus. Length of pods, about 4 inches, more productive and vigorous than Gradus. Pods blunt or square ended, and light green. A better pea for Market Gardeners than Gradus.

World's Record—55 Days

Pods about 4 inches long. An early type of the celebrated Gradus, but very frequently used as an early Gradus. Height of vine 24 to 30 inches. Fine showy Pods, with 7 to 8 peas in a pod. Used by some Seedsmen as Gradus.

SECOND EARLIES AND LATE

Admiral, Green Seed—70 Days

Color of dry seed is deep green. Especially desirable for canners, as it retains its green color under all conditions.

Carter's Daisy or Dwarf Telephone—70 Days

Vines about 20 inches high. So named because its vine, although very short, resembles very closely the Telephones, stems very thick and sturdy, broad leaves. Pods about 4½ inches long, of the Telephone type, and a yellowish-green. Seed light green and wrinkled.

Everbearing—70 Days

Pods about 3 inches long. Peas large, and of good quality. Height of vine about 30 to 36 inches. Most of the pods borne at top of vines. Pods about 2½ to 3 inches long. Dry Peas large and wrinkled.

McLean's Advancers or Perfection—70 Days

A green, wrinkled variety. Height of vine about 36 inches. Upright, very vigorous in growth, and very popular with market gardeners and commercial canners. Pods about 2¾ inches long, containing 5 to 6 good flavored Peas.

Sutton's Excelsior—70 Days

Height of vine about 18 inches, producing exceedingly dark pods which are blunt ended. Very desirable for both private and market gardeners. A very fine variety.

Prince Edward—80 Days

Vine 4 to 4½ feet. Pods large, about 5 to 5½ inches long, containing 5 to 7 Peas of the best dark podded Telephone type, showy, exceedingly productive and in our opinion the best of the Telephone type on the market today for either Kitchen or Market Gardeners to grow.

Stratagem—75 Days

Height of vine about 20 to 24 inches. Pods of Telephone type, about 4 inches long. Seed blue, slightly pitted, vine very luxurious, a great favorite with private gardeners because of its large, handsome pods.

Telegraph or Long Island Mammoth—85 Days

Vines 5 feet tall. Pods 4¼ inches long, containing 7 to 8 large Peas, smooth. Very popular on account of its large, handsome, deep green pods. Will stand early planting better than Telephone types, the seed being smooth.

Telephone—80 Days

Height of vine 4 feet. Pods about 4½ inches long, dark green, one of the best late, large podded Peas.

PEAS—Continued

Black Eye Marrows—80 Days

Height of vine $4\frac{1}{2}$ to 5 feet tall. Late and vigorous. Seed large, round, oval, creamy yellow with a black eye. Pods about 3 inches long. Well known for years.

Canada Field—70 Days

A smooth, white Pea, used very extensively to plant with oats.

Champion of England or Forty Fold—70 Days

Length of pods about 3 inches, containing 5 to 7 fine flavored Peas. Height of vine about 48 inches. One of the old standard varieties, late, but of fine quality. Seed tender and luscious. Dry seed, light green.

Horsford Market Garden—70 Days

Height of vine about 36 inches. Pods medium size, about $2\frac{3}{4}$ inches long, containing 6 to 7 dark green peas. Small leaves with very dark green foliage. Very large producer of showy pods, producing pairs in great abundance.

Large White Marrowfat—80 Days

Vines about $4\frac{1}{2}$ feet high, of strong growing habits, pods about 3 inches long, containing 5 to 6 large white Peas.

EDIBLE PODS OR SUGAR PEAS

Dwarf Purple Blossom—75 Days

Height of vine about 24 to 30 inches. Of the same habits as Dwarf White, only producing Peas of a

gray mottled appearance and having purple blossoms as the name signifies. The pods are eaten like snap Beans.

Dwarf White Blossom—75 Days

Height of vine about 24 to 30 inches. Very productive. Pods $2\frac{1}{2}$ inches in length, well filled with 6 to 7 Peas. Blossoms white. Dry seed, creamy white. Used extensively for salad.

Mammoth Luscious Sugar—80 Days

Height of vine about 60 inches. Very similar in character to the Mammoth Melting Sugar, seeds gray mottled, blossoms purple. Pods almost identical to Mammoth Melting, and eaten like a Snap Bean.

Mammoth Melting Sugar—80 Days

Height of vine about 60 inches. Pods 4 to 5 inches long. Very twisted and puffed, $1\frac{1}{4}$ to 2 inches wide, all the Peas being placed along the top of pod. Seeds white. Blossoms white. Pods are eaten like a Snap Bean.

Champion Moss Curled Parsley

PARSLEY

Seventy Days from Sowing to Cutting. Two Ounces of Seed to 100 Yards of Row. Eight Pounds to the Acre.

The drilling should take place when the Cherry is in bloom, and may be continued until Autumn. If for horse culture, the rows should be 3 feet apart; if for hand culture, the rows should be 18 inches apart.

Champion Moss Curled—70 Days

An improvement on the Fine Curled; more desirable. Used for flavoring and very decorative.

Fine Curled or Double—70 Days

A well selected sort, as good as any.

Hamburg or Turnip-Rooted—90 Days

The thick roots are cooked like Parsnip, tops not used.

Plain or Single—60 Days

Used as a pot herb. Leaves flat and plain. More aromatic than the Curled varieties.

	Pkt.	Oz.	$\frac{1}{4}$ lb.	Lb.

Confidence Is a Plant of Slow Growth

Once firmly established, however, it is a **business asset** worth cultivating.

'Way back in 1784 we established the confidence of the people in

DEPENDABLE GARDEN SEEDS

PEPPER

½ Ounce to 10 Yards of Row

All of Landreth's Peppers are grown in the State of New Jersey and are giving much better results, as to purity and productiveness, than the cheaper European Peppers which are later and not so true to American types. No garden vegetable or fruit compared with Pepper has increased the similar percentage compared with years ago; first, due to enormous use by food packing establishments; second, to its extraordinary use by Italians and other foreigners who have adopted its use in the kitchen where it is used daily.

Owing to the fact that we have had so many of our customers asking us to supply them with Green Pepper Seed, we wish to state, that all Peppers are green when young, or not fully grown and only show their brilliant red color when they become entirely ripe.

Anaheim Chili Pepper—90 Days

A monstrous Red Cayenne, but different in being mild in flavor, agreeably pungent when in natural ripe condition or after drying. Length long as a lead pencil and an inch thick at the top, terminating in a point, generally straight like a long Radish or like a long Cayenne, mild in flavor.

	Pkt.	Oz.	¼ lb.	Lb.
Anaheim				
Chili.....	.10	.50	1.55	5.25
Chinese Giant .10	.65	2.20	7.75	
Crimson Giant .10	.50	1.75	6.00	

Chinese Giant—140 Days

Much larger and later than Ruby King and remarkable as a show fruit. These chunky monstrosities are bright scarlet when ripe, double the diameter of any known Pepper and are really wonderful to look at. They are so mild that they can be eaten out of the hand like an apple. The Bush is stocky of about 2 feet high, or less. The Peppers 4 to 5 inches in diameter—4½ inches long and usually 4 ridges, indented at the blossom end.

Crimson Giant or Ohio Crimson—130 Days

Similar to the Ruby King, but broader, longer and deeper fruited like Chinese Giant, a monster about 4½ inches long by 4 inches wide, but not so large as Chinese Giant. Vines strong, dark, large leaved, very productive in fruit, frequently bearing 7 to 8 fruit at once and covered by a succession of smaller fruit. Sold by many as Chinese Giant.

Chinese Giant—often twice as big

PEPPER—Continued

Neapolitan—90 Days

Plant about 2 feet tall. Earliest, fair sized. Possibly the most productive of all the large Peppers, bears constantly until frost. Mild as an apple. Fruit about 4 inches long and $4\frac{1}{8}$ inches in circumference, standing upright until they get so heavy they sometimes droop. A variety in which the length is over twice the diameter. Remarkably early for a large fruited Pepper. Might be classed as an extra early. A variety free from hot burning qualities; that is very sweet. Particularly desirable for domestic use.

Ruby King—full size

Pimento—100 Days

Very productive, smooth skin, good size, flesh thick, very solid, bright red, mild flavor, very good for stuffing. Largely used by canners. A reliable bearer. Plants 2 to $2\frac{1}{2}$ feet high.

Ruby Giant or World Beater—115 Days

A large variation of Ruby King, with Chinese Giant blood. Similar in shape to Ruby King but broader at the blossom end. Bright red. Unusually productive. Mild in flavor, flesh thick, consequently a fine shipper. Is a very desirable variety.

Ruby King—110 Days

A general favorite where known and the most generally used of all Peppers. It is the longest of the monstrous peppers. A brilliant red, produces 10 to 15 fruit to the plant. The fruits are often 6 inches long and $3\frac{1}{2}$ inches wide across the shoulder. Walls are thick and sturdy. Flavor sweet, that is, free from heat. A sort which resists decay longer than any other. Altogether, the most used Pepper in the list.

Very Small Cayenne—90 Days

Height of bush about 2 feet. Length of fruit $1\frac{1}{2}$ to 2 inches— $\frac{3}{8}$ of an inch thick. Very superior to the old Cayenne. Exceedingly productive, bearing very hot, upright, bright red fruit all over the plant. Used extensively as a pot herb.

Bull Nose or Large Bell—120 Days

Plants average about 2 feet high, large fruit, thick flesh, with a broad end almost square. One of the old stand-bys. The true stock or original Bull Nose was hot. Color deep green when young and when ripe, bright crimson. Mild in flavor.

Golden Bell or Golden Dawn—120 Days

Shaped like Bull Nose, fruit smaller, but yellow all over. Same general character as Bull Nose. Fruit 2 to $2\frac{1}{2}$ inches across and 2 to $2\frac{1}{2}$ inches deep. Usually three lobes to each fruit. Mild.

Long Cayenne—100 Days

Fruit about 3 to $3\frac{1}{2}$ inches long, $\frac{1}{2}$ inch across at stem end twisted to a point. Long and slender. Color bright crimson, and very hot. This variety is used extensively with pot herbs.

Four pounds of Seed to the Acre.
Hills 8 x 8 if Planted in the Open.

PUMPKIN

THESE PRICES
INCLUDE POSTAGE

The time for planting Pumpkin seed varies from the first Corn planting until probably a month subsequent. Later than that a successful crop cannot be expected as this plant requires a long season. When grown with Corn every fourth hill of every fourth row may be planted in Pumpkin Seed and this should be done when the Corn is planted. During the working of the Corn, the Pumpkin plants will stand unharmed, and after the corn cultivation ceases, the Pumpkin vines will extend over the field, almost covering it. Pumpkins are more of a field Vegetable than a garden,

Brother Jonathan or Green Striped Cashaw— 85 Days

Fruit large, bottle shaped, with very slight crook-neck, not equal in neck to the Landreth's Yellow Cashaw, many fruit being almost straight. Color creamy white, with regular stripes of green. Flesh light yellow and thick.

Connecticut Field or Big Tom—70 Days

A large, rich, smooth, orange yellow, slightly oval or cylindrical fruit. Very productive, used extensively for canning and very popular for pies. Grown very largely in Corn fields.

Early Sugar or New England Pie—65 Days

This is a very fine, small, sweet, fine grained productive sort, of good keeping qualities. Fruit oval, or globular, flattened at both poles, 8 to 10 inches in diameter, slightly ribbed. Flesh a deep rich yellow or orange.

Japanese Pie—70 Days

Yellow fleshed, fine quality. Dark green skin. Similar in shape to Cashaw, but not nearly so crooked a neck. Color at maturity dark green, heavily russeted at stem-end, very productive.

Kentucky Field—65 Days

A poorly selected stock of our famous Cheese Pumpkin. Many variations in shape. Some fruits very much like a round Watermelon, others big as a nail keg. Color a light golden cream.

Landreth's Cheese—65 Days

An excellent kitchen variety. Shape flat like a Cheese box. Outside color lemon, no stripes, a fine keeper. Often 15 inches across the top and 6 to 7 inches thick, top and bottom indented. We can say without hesitancy there is no stock in the market equal to the Cheese Pumpkin we are offering. Don't confuse this stock with the Kentucky Field offered by many houses as Cheese.

Tennessee Sweet Potato—80 Days

Smooth, pear shaped, round, white in color. Good shape and color. Flesh creamy white of fine texture.

Landreth's Yellow Cashaw

Yellow Cashaw—85 Days

Our stock of this cannot be excelled by any. It is a mammoth Pumpkin, frequently weighing 40 to 50 pounds, with a very large, full, meaty, curved neck, which is excellent for Pies. Outside color very rich yellow cream. No stripes of any kind. Crookneck often bends back so as to touch the body.

Yellow Monster or King of the Mammoth—85 Days

This is the largest Pumpkin on the market today and in reality is a monster. For many years fruits of this sort have been awarded every prize in State and County Fairs for the largest Pumpkin. It is not only an exhibition sort but is a very profitable variety for raising for stock feeding and is at the same time excellent for table use, for although rather coarse and somewhat stringy, is of fine flavor.

RADISH

THESE PRICES
INCLUDE POSTAGE

Six Ounces of Seed to 100 Yards of Row. Six Pounds to the Acre.

Sow Radish Seed as soon as the ground is in condition to work, or just before the Cherry is in bloom. This Vegetable is one of the earliest Vegetables that one can grow in the garden in the Spring. Radishes grown on thin soil can never be good. They will be misshapen and tough. To be good, they must always be grown quickly. In selecting the seed of Radishes for hot beds, always be sure to select those varieties with short leaves.

EARLY TURNIP VARIETIES

Cardinal Globe—20 Days

This is one of the best all-red or bright scarlet globe Radishes on the market today. Excellent for early forcing. Small top. Unusually attractive.

Crimson Giant—25 Days

This is one of the largest of the early all-red varieties. Roots almost globular in shape, 1 to 1½ inches in diameter, crimson in color, and of excellent quality, remaining in condition a long time.

Early Scarlet Globe—20 Days

Roots of this variety are slightly oval, of a first-class all-scarlet color, excellent for early forcing, or for outdoor or kitchen garden planting. Most highly recommended.

Early Deep Scarlet Turnip—20 Days

Rich in color, smooth skin, flat like a Turnip, excellent for forcing.

Early Scarlet Turnip White Tipped—20 Days

Turnip shaped to oval. Scarlet crowns with bottom ½ white. The very attractive Radish familiar on the market stands.

French Breakfast—22 Days

Olive shaped or stump rooted. Upper part of bulb bright scarlet with white ½ of the way up from the bottom. An excellent variety for the private garden. About 1½ inches long and ¾ inch in diameter.

Golden Globe—30 Days

This is a very fine Radish for summer. Shape globular, color of outside skin amber, flavor mild,

keeping long in edible condition without getting pithy. About 2 inches thick and 2¼ inches in diameter.

Early Scarlet Globe

Philadelphia White Box—30 Days

So named as grown in open frames. Remains in edible condition a long time. Roots white and Turnip shaped. Does not get pithy until quite old. The quality possessed by this variety to a very remarkable degree is one which makes the sort most desirable for the family or market gardener.

Landreth's Special White Tipped Scarlet—20 Days

Something extra fine. Small in leaf, very early. Flat to globular, and with an unusual amount of white on the bottom which often extends half-way up the bulb, the lower half being white, the upper half bright scarlet; consequently, the contrast in color being very showy either on the table or market stand. We highly recommend this as a most attractive sort.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Landreths' 15 Day Scarlet

A fine brilliant scarlet Turnip-shaped bulb, which has very small tops. A most desirable variety for forcing. It will lead the market in all reds, being ready for table use in 15 days from germination. This is a remarkable Radish for indoor culture.

LONG ROOTED VARIETIES

Chartier or Long Rose—35 Days

Sometimes called Sheppard. This is an excellent variety for planting outdoors. Roots slim and long, averaging 7 to 8 inches. Bright scarlet in color, very brilliant, shading to a white tip.

Cincinnati Market—35 Days

This Radish is a selection from Woods Early Frame. A decided improvement. Scarlet 4-5 of the length, 1-5 at the point being white. It is a long, slim, transparent, about 6 to 7 inches long.

Long Scarlet Short Top—38 Days

This is a first-class brilliant scarlet Radish growing 7 to 8 inches long, with a good shoulder and one of the best long scarlet Radishes on the market.

Strasburg Long White or Hospital—40 Days

Long in form, roots 4 to 6 inches and about 1½ to 2 inches in diameter. Skin is pure white and smooth. Roots thick at shoulder, tapering to a point. Remains in edible condition a long time.

White Icicle—38 Days

We consider this the best all-white Long White Radish on the market. The roots are shorter than the old White Vienna and earlier and very brittle. They are 5 to 6 inches long and about ½ inch in diameter. Pure white and transparent, possessing excellent eating qualities.

Wonderful Half Long or Half Long Scarlet—35 Days

Half long with a white point, very early. Color of upper part brilliant scarlet. Length 2½ inches contracting from a broad shoulder to a sharp point.

WINTER VARIETIES

About 55 to 65 Days, According to Variety.

Celestial or Chinese Half Long Stump

A quick growing variety somewhat resembling Half Long Stump Rooted Carrot in shape, only fuller. Roots are white, 5 to 6 inches long, 2½ to 3 inches in diameter. Very crisp and tender and of delicate flavor. This is one of the best winter Radishes on the market.

China Rose or Scarlet China Winter

A fine Winter sort, half long stump, scarlet in color ¾ of the length. The roots are cylindrical, and larger at the bottom than at the top. Skin a bright deep rose, flesh white, tops moderately large. Is a cutleaf stem tinged with rose. Roots about 5 inches long. Blunt at both ends.

Long Black Spanish

Roots 8 to 10 inches long and 1½ to 2 inches in thickness. Outside skin black. Flesh pure white and of good texture. A very hardy winter Radish and particularly desirable.

Long White Spanish

Similar to Long Black Spanish except in color. Keeps as well as a Potato.

Round Black Spanish

A fine round or top-shaped, black skinned Winter Radish, sometimes 2 to 3 inches in diameter. Skin almost black, flesh pure white.

RHUBARB

VICTORIA

Easily grown, plants to be thinned out to ten inches; if to be transplanted to a new location, set them out eighteen inches apart.

Pkt., .10 Oz., .20 ¼ lb., .60 Lb., 2.00

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

SUMMER OR BUSH SQUASH

Three Ounces of Seed Will Sow 100 Yards of Row. Three to Four Pounds to the Acre.

This seed may be planted when the Apple is in bloom and for several weeks subsequently, but not later with much hopes of a crop. It should be planted in hills 4x4 feet for the Bush varieties and 6x8 feet for the long running sorts. An admirable vegetable when cooked young.

THESE PRICES INCLUDE POSTAGE

Early White Bush—50 Days

The Cymbling of the south, sometimes called Patty Pan. The shape of this variety is round, about 4 inches thick, 8 to 10 inches across, scalloped on the edges with frequent warts on both sides. Color, creamy white. One of the best Squashes to stew.

Giant Summer Crookneck—60 Days

A large fruited selection of the old-time Golden Summer Crookneck. Fruit averages about 12 to 18 inches long and 6 to 8 inches thick, well crooked and covered with warts, color a deep orange. A decided improvement on the small form. When young, a very good slicer and excellent fried.

Golden Summer Crookneck—50 Days

This is in all respects similar to the Giant Summer Crookneck, except that it is earlier and smaller in every way.

Cocozelle or Italian Green Striped—90 Days

A compact vine. Fruit somewhat the shape of a Banana Cantaloupe, about 12 to 15 inches long, 4 to 5 inches thick. When young dark green, afterwards light yellow. Excellent for slicing and frying like Egg Plant.

WINTER OR RUNNING VARIETIES

Boston Marrow—95 Days

A meaty or thick fleshed, very productive variety, suitable for the factory. Fruit keeps weeks after the vines have been killed by frost. Color of skin bright orange shading to lighter color of flesh, deep orange. A fine Squash for pies and Winter use.

Giant Summer Yellow Crook Neck

Early White Bush

Golden Hubbard—90 Days

Similar in shape to the Green Hubbard, only earlier. Skin usually warted, of a fine orange-red color except for a slight tinge of green at blossom end. Flesh deep orange.

Delicious—85 Days

In shape resembling a medium sized Hubbard. Shell not very thick, but is rather hard and strong; color, usually dark green, sometimes lighter and mottled. Flesh thick, fine grained; color, bright yellow. Fine for Market and Home Garden when quality is appreciated.

Hubbard—95 Days

A very popular Winter Squash. Skin dark green or bronze slightly marked with orange. Flesh is a bright yellow orange. An excellent keeper, sometimes being kept until Spring. A favorite variety with the Canners.

Blue Hubbard—90 Days

An Early blue skinned Hubbard of excellent quality.

Mammoth Chili—80 Days

The largest of all Squash, often reaching a weight of 100 pounds. Very showy, skin bronze, flesh thick, color orange.

Warty Hubbard—95 Days

Identical to the old form of Hubbard in every way, but covered with warts, and by some, preferred to the Smooth Hubbard, only a fancy.

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Six ounces of seed to 100 yards of row. Thirty pounds to the acre.

SPINACH

THESE PRICES
INCLUDE POSTAGE

Edible in 40 to 60 days from planting. This Seed may be sown in the Autumn or as early in the Spring as the condition of the ground will permit. We advise by all means to plant in the Autumn the Bloomsdale Spinach as it is by far the best of all the Autumn varieties. It is, however, not as good for Spring planting as Ever Ready, Juliana, or Long Seasons, because it shoots early to seed. Spinach, when planted south of Washington, D. C., stands out all Winter and during the various open spells throughout the Winter can be cut and sent to market as a green Vegetable; very valuable in this respect.

Bloomsdale Spinach

Bloomsdale—40 Days

Sometimes called Norfolk Savoy. The Landreths introduced and named this variety in 1826. Since then it has become a standard and now appears in nearly all catalogs in the United States and is equally well known in Europe. No Spinach is so well known as this variety and we are perfectly safe in saying that five times as much of this is sold and planted in the United States, as any other variety. As an Autumn sort it is superior to all others, but in Spring it is inclined to shoot early. The leaves are twisted, bloated and very dark green, giving them, when ready for shipment, an elasticity adapting them for transportation over long distances and at the same time giving the crop large measuring qualities.

Bloomsdale Long Standing (New)—40 Days

Ten days longer in table condition than the main crop "Bloomsdale." More bloated and darker in

color than the famous Bloomsdale. Remarkable in the total absence of male plants. This selection possesses all the good qualities of the famous Bloomsdale, the habit of remaining in shipping condition after Bloomsdale is shot to seed, which marks it as a very valuable type. Use or sow it and be convinced that it has unusual merit.

Ever Ready—60 Days

So named because it continues in cutting condition three weeks longer than any other variety except the New Zealand. A variety of most superior qualities, very dark leaves, more pointed, short jointed, resisting cold and the most intense heat. One of the best for Spring sowing, as slow to shoot to seed.

Juliana—50 Days

A choice, dark green, much savoyed or bloated leaf, very slow to shoot to seed, consequently remaining in cutting condition a long time. A great improvement on Victoria and Long Season. No male plants. Both sexes on a portion of some of the plants. A new introduction of great merit.

King of Denmark—60 Days

This variety continues in edible condition longer than any other variety on the market. It has long, very thick, very dark leaves. Good quality. An admirable successor to many sorts which have been cultivated.

SPINACH—Continued

Large Leaved or Broad Flanders—55 Days

This is a large leaved variety, as its name implies. Habit of growing erect, consequently does not collect sand. Leaves broad, arrow-shaped to round, and inclined to be flat. Surface of leaves smooth. Long stems.

Long Seasons—50 Days

More nearly resembles the Bloomsdale than any other variety, but much later. Might be termed spring stock of Bloomsdale. It is very slow to shoot to seed. Leaves dark black-blue green almost black in color, crumpled, savoyed, thick, succulent and tender.

New Zealand

New Zealand—from 60 to 150 Days

Absolutely distinct in form, color and habit from other Spinach—it is not a Spinach, though used as a Spinach. Foliage thick, succulent, dark green,

Long Standing Round Seeded Thick Leaved—60 Days

Plants very large and late. Leaves broad, arrow-shaped to round, smooth, dark green. Used more by Market Gardeners or Truckers than Kitchen Gardeners.

Victoria—50 Days

This most excellent variety produces large, thick, very dark, tender leaves. The plants are large and compact in growth. Very slow to shoot to seed.

Virclay—48 Days

A mammoth sort producing monstrous leaves of a fair quality. A very strong feeder requiring heavy fertilizer. Very largely used in Europe.

never sunburns, a true heat resistant, leaves covered with water globules like an ice-plant. Later to mature for table than Spinach of usual form, but remaining in edible condition ten times as long. Some plants in condition from July until killed by frost. A sort to "cut and come again," as it is most productive, and continuously over a period of 150 days sends out a fresh growth. The plants spread five times as wide and rise to three times the height of ordinary Spinach, covering the ground, making a difference of fifteen to twenty times excess in the volume of edible material. Slow to germinate. Excessive heat does not check its growth, but, to the contrary, it positively grows more luxuriantly, the driest weather never stopping its juicy and rapid growth. A most desirable vegetable. Rows should never be less than 2 feet apart.

Plants should be thinned to 4 to 5 inches apart. Thick leaved, very succulent leaves, very dark. A great favorite in some localities.

SALSIFY OR OYSTER PLANT

Six Pounds to Acre Two Ounces of Seed to 100 Yards of Row.

THESE PRICES
INCLUDE POSTAGE

This plant produces an edible root, long and slim, white-fleshed and smooth white skin. Leaves gray-green, long, straight and narrow. It is a native of the south of Europe, but only within the present century used as a culinary vegetable. Sow when the Cherry is in bloom, in drills, in deeply dug and well-manured ground; the drills should be 18 to 24 inches apart. When the plants are up a few inches weed and thin them so as to stand 3 to 4 inches apart. Preserve in pits, same as Carrots or Beets. Cultivate in all respects as directed for Carrot.

Sandwich Island—90 days

A very superior strain to the French sort, producing smoother, larger and more vigorous roots, foliage stronger. Roots similar to a slim Parsnip. Often called "vegetable oyster."

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 80c.; lb., \$2.75.

Salsify

SUNFLOWER

Early Russian

$\frac{1}{2}$ lb., 20c.; lb., 35c.; 10 lbs., \$2.75

TO BE SATISFIED ORDER FROM LANDRETH SEEDS WHICH SUCCEED

Tomato—Walter Richards Extra Early Improved Globe

Vine:—Tall, dark green, very healthy and vigorous, with many thick stems and more fruit bearing branches than any other Tomato. More wilt-resistant than any other globe sort.

Maturity:—100 days from vegetation of the seed to ripened fruit, earlier than other Globes.

Fruit:—An oval globe with heavy, very smooth skin, with but little cavity at the stem end and none at the blossom end, much like an orange in shape. No green core and absolutely free from cracks. Fruit borne in clusters, tightly attached to the stems.

Color:—Wonderfully showy, being of "Acme Purple" shades, that is very dainty soft purple.

Size:—3½ inches across the crown—some larger, some smaller.

Productiveness:—60 to 100 fruits to the vine are quite common, an enormous producer, an average good crop equals 15 tons to the acre.

Quality:—Fine for shipping—incomparable, inconceivable.

Origin:—Introduced by Mr. Walter Richards, of Crystal Springs, Mississippi.

Price:—\$35.00 per pound; \$20.00 per ½ pound; \$3.00 per ounce; 75c. per ¼ ounce packet.

Photograph of Walter Richards Extra Early Improved Globe Tomato Plants, as grown at Crystal Springs, Mississippi

For Express charges paid by customer, or small seeds Postage paid by us, see page 2 of cover.

Two-thirds Natural Size

Tomato—Marglobe

This Tomato is undoubtedly the best of all recent introductions. It was named and introduced by Dr. Pritchard, of the Bureau of Plant Industry, United States Department of Agriculture, Washington, D. C. It is Globe in shape, deep red all over, very little depression at the stem end, does not crack. No mark at all at the blossom end. It is solid, no green core and most productive. The vines are robust and wilt-resistant as much as any variety we have ever seen. It possesses everything desirable in character and a most attractive Tomato in every way. Few seeds. This Tomato is similar in shape to old well known Globes but larger, and instead of being pink as Globes, is **Red**. The Northern market much prefers a Red Tomato to a Pink. The growers have been using a Pink Globe because they could not get a Red. It has been found to be the best Tomato which can be grown in Florida and the South for shipping to northern markets. We recommend the Marglobe to take the first place with Market Gardeners, Kitchen Gardeners and Cannerymen. The Cannerymen who used it this year were most pleased with it, and we believe when others become acquainted with it, it will be used to a large extent in the canning trade. The Seed which we offer is grown right here by ourselves, product of Seed obtained from Dr. Pritchard, and is absolutely correct. Dr. Pritchard went over our Tomato fields this summer. This variety will be more generally cultivated during the summer of

Interior—qualities most remarkable
Three-fourths Average Size

1927—as it is the most profitable of all sorts. The demand will be so great that it will be likely that we will plant out for Seed more than half our acreage in this variety. We cannot say too much for this strain of Tomato and we hope all our customers will order some.

TOMATO

THESE PRICES
INCLUDE POSTAGE

We have not yet been able to find an absolutely wilt-resisting variety, though some seedsmen advertise such. One ounce of Seed will sow 100 yards. $\frac{1}{4}$ lb. to the acre for plants. Ripening for table 95 to 120 days from sowing, according to variety and season.

When the Apple is in bloom sow in hills three feet apart on a warm border. For a later supply sow a short time afterwards in a more open situation. As the plants advance in growth, support them by brush-wood. To have the Tomato very early, it is necessary to start the plants in a hot-bed, or they may be reared in a flower pot or cigar box in a window and subsequently transplanted.

Plants for an early crop should be raised under glass. For intermediate crop, they may be raised in outside beds. For late crop the seed may be planted in permanent position when the Apple is in bloom. The average production of fruit, per acre on cultivated and fertilized land, is about 14,000 pounds, or say 250 bushels per acre, though twice that quantity has often been grown.

The Tomato vine is a rank feeder and especially needs nitrogen, otherwise known in one of its forms as ammonia. Stable manure is rich in ammonia. So is nitrate of soda, nitrate of potash and also that commercial fertilizer known as dried meat, dried blood, or chicken guano. For Tomatoes, which are soft wooded, ammonia is more desirable than potash or phosphoric acid, which are, in their turn, more valuable in the growth of hardwood plants or of grains which make hard straw.

In purchasing Landreth's Tomato Seed, the buyer is certain of the absolute purity of what he buys. In the case of Landreth's Bloomsdale Grown Tomato Seed, every crop is produced from seed saved from hand-selected fruit of the preceding year, every one of which fruit was closely inspected and approved as to shape, size, color and general appearance, and what is more important, only fruit saved from vines of approved development.

Chalk's Early Jewel—100 Days

Five days later than the Landreth. Large, globular fruit, solid, smooth skin, flesh bright scarlet and of excellent quality. Fruit free from cracks or any convolutions upon the surface. Vine strong and very hardy. A first-class Market Garden sort.

Bonny Best—100 Days

An early, smooth red, productive variety. Very similar if not identical with Chalk's Early Jewel.

Delaware Beauty

Delaware Beauty—105 Days

The Delaware Beauty was introduced by Landreth in the autumn of 1912. The following autumn of 1913 we could not fill the demand for seed. A showy, medium-sized, red sort. Vine compact, deep green, blight-resistant, thick stemmed, extraordinarily productive.

One week later than Chalk's Jewel, one week earlier than the Landreth's Red Rock, and two weeks earlier than Stone.

Fruit smooth, almost entirely free from splits, a most distinguishing quality, very uniform in size and showy. Of a habit of simultaneously coloring up all over the fruit. Shape slightly flattish at blossom end, quite globular at stem or crown, and no depression whatever at stem end, the illustration showing that it is unusually full on top—a most desirable quality, absolutely no waste.

Its habit of ripening a week ahead of the Landreth's Red Rock and two weeks ahead of Stone is most desirable. A productive sort which was long looked for to come in ahead of these two late varieties. Cannors especially are asked to observe this most profitable character. It, like all other Landreth-grown Tomatoes, can only be bought in sealed, lithographed cardboard boxes.

Gulf State Market—100 Days

A productive sort and an excellent shipper by reason of its tough skin. Color purple and pink. Form globular, free from cracks. Vine very hardy. One of the best.

	Pkt.	Oz.	$\frac{1}{4}$ lb.	Lb.
Chalks Jewel	.10	.40	1.15	4.00

TOMATO—Continued

The Landreth— $\frac{1}{4}$ size

Earliana—90 Days

The earliest, large, red, smooth Tomato on the market today. Fruits medium size, nearly round and bright scarlet. Vines healthy with small foliage, very productive and ripening the entire crop in a very short time. Vines of this variety in the Middle Atlantic States are very often dead by September 1st. Used extensively by Cannery for their early product; most exclusively in New Jersey for the early market trade.

Landreth's Extra Early Sunrise—85 Days

Early: So named as it is undoubtedly the earliest of all Field Sorts, 5 to 8 days earlier than Earliana.

Vine: Small and compact which can be set one foot each way nearer than ordinary sorts. **Foliage:** Quite small. **Fruit** in the center of the vine, color red, shape flat, smooth skinned. **Product:** Averaging 10 tons to the acre where other sorts will only average half that amount. Not so highly recommended for late season planting.

Greater Baltimore—110 Days

A main crop variety as a fruiter, slightly more reliable than Stone because, although it is about the same size, it is earlier and more productive. It is very dependable for the vines are stout, continuous croppers and remain in full vigor until killed by frost. The fruits are large, solid, round, red, and free from any kind of blemish.

John Baer—100 Days

An early sort. So similar to Chalk's Jewel, that it is practically impossible to say which is best.

The Landreth—95 Days

Quite distinct. It is choice or we would not have named it "The Landreth."

This Tomato is not as large as the Landreth's Red Rock, is as red as the Landreth Red Rock and two weeks earlier, ripening two days after the Earliana, but twice as productive, and ripening twenty days ahead of the Stone, Paragon, or other sorts.

The vine is short-stemmed, unusually healthy, and productive of blood-red, beyond comparison solid, smooth, meaty and most attractive fruit, **astonishingly productive.**

The shape of the fruit is full bottomed, that is, round at the bottom, **quite free from cracks**, with very little cavity at the stem end.

The Landreth Tomato is in appearances after the order of Chalk's Jewel, an improvement out of the Chalk's Jewel, but is **five days earlier**, considerably **larger fruited**, far more **productive**, picking over a longer period, of **better color**, more **solid**, and **does not crack.** Altogether it is more desirable than Chalk's Jewel and has proved a leader in every section where an early Tomato is needed.

Landreth's Ever Large—120 Days

So named because the fruit keeps its size from the first to the last ripening. An exceedingly productive red sort, is not entirely free from roughness. Three-quarters of the fruit are so large and solid that they weigh nearly a pound each.

Landreth's No Substitute—110 Days

Unusually productive. Very showy and distinctive in vine. Similar to the old Potato Leaved, but immeasurably superior. Vines spreading and vigorous, stems thick, leaves very dark and broad, like a Potato, and often larger than a man's hand. The physical vigor of the plant is assured by its great breathing or lung power. Fruit brilliant red, full sized, round or full at bottom or blossom end. Both fruit and vines very healthy. A very desirable sort, ripening fruit one week earlier than Stone, but by far a more showy sort.

Matchless—115 Days

Large, half flat, ovoid, smooth, solid, red fruit of excellent quality.

Norton—115 Days

A main-crop, scarlet-fruited variety. Very similar to Stone, of which it is a selection. Introduced by the U. S. Dept. of Agriculture for wilt-resistance. Fruits are of medium size, smooth, and solid.

TOMATO—Continued

Norton bears well and gives a good crop. Vines make a medium to heavy growth. One of the best long distance shippers.

Landreths' Red Rock—110 Days

A choice sort, exceedingly solid, or, in other words, free from water, full of pectin, that is, a gum-like juice. Nothing like it in this respect. Shape round or full-bottomed, smooth as an apple, free from splits, small cavity at stem end, ripens all over, fruit borne in clusters. Vine very healthy; quite rust-resistant. It requires rich soil. Several days earlier and more productive than Stone, as it is rounder, a deeper red, more solid or meaty, larger fruited.

Landreths' Bloomsdale—105 Days

A wagon load of the Landreths' Bloomsdale Tomato is as showy as a load of scarlet roses. The Earliana, the earliest Tomato of any size, being only a week earlier, but the Earliana is somewhat flat and convoluted, while the Landreths' Bloomsdale is far superior, being plump and smooth and a continuous picker, while the Earliana is not, nor do we make any comparison between it and the Earliana, except alone to indicate its period of ripening, for in tonnage it is at least a 50 % larger cropper than the Earliana, consequent upon its everbearing quality. It is most admirably adapted for a canners' sort, being unusually large, round, smooth, very meaty and crackless, not losing much weight in skinning, a repeater in fruiting, consequently a heavy picker each time. We have picked it five times at intervals of ten days, that is, 50 days of picking. The habit of the plant is particularly hardy, being free from disease, both at stem and fruit. The Ohio Experimental Station in Bulletin No. 82, reports the Bloomsdale as picking 18 tons per acre in comparison with the Stone at 5½ tons.

Plum Shaped Red

2 inches long by one inch in diameter, the shape of a plum. Fruit bright or scarlet red, used in pickling in unbroken form.

Select Radibaugh—110 Days

Very strong and healthy vine, leaves rather small. Fruit red, late, elongated, that is, longer than wide, with a globular blossom, much resembling the Delaware Beauty but larger. Wilt-resistant.

Stone—115 Days

A superior sort, a great favorite in all gardens. Used extensively by commercial canners. It is a late sort, productive, producing large, solid, bright red, smooth fruit and undoubtedly used more than any other Tomato in the United States.

Success—115 Days

Color bright red, large, ovoid, late, solid, deep from stem to blossom end.

PURPLE VARIETIES

Acme or Essex Hybrid—105 Days

An early ripener, medium size, shape slightly oval and smooth, color reddish-purple; flesh deep scarlet and solid, a very popular sort everywhere, especially in markets where purple fruit is desired.

Beauty—110 Days

Well named, fruit considerably larger than Acme, color same, being reddish purple, solid, meaty, smooth, fine for table, growing on vines of a healthy habit.

Dwarf Champion—110 Days

Second early, stems short, thick, stiff, almost self-supporting. Grows like a tree, therefore sometimes called Tree Tomato, a habit which enables the plants to be set much closer together than the ordinary Tomato. Potato leaves very dark in color, much curled and twisted. Fruit medium size, nearly round, solid, purplish red in color.

Early Detroit—110 Days

A large early, productive, solid variety, flesh purple. Similar to a large Beauty. Fruit smooth, always globular-shaped, of good quality.

Landreths' Bloomsdale

TOMATO—Continued

Globe—100 Days

Grown very largely in the southern part of Florida, Texas and Louisiana for shipment to the northern markets. Color a pinkish red; plum to globe-shaped, very productive. A constant bearer. This Tomato originated in our Bloomsdale Green House through hybridization, but the time for its popularity had not been reached, therefore we dropped it and it was taken up by others.

Landreths' Crown-Picked Globe—100 Days

We call special attention to the "Landreths' Crown-picked" Globe Tomato. We know the "Landreths' Crown Picked" to be something very fine as a shipper. We pay very special attention to this variety.

The merit of value for shipping of the Landreths' Globe as Landreths grow it is that it has very thick, tough outer skin and interior walls, fitting it especially to resist skinning on the one hand, or on the other, cracking or bursting in transportation, which resisting quality fits it for shipment to much longer distances than **any other known sort**. Don't forget this point as to its unusual resisting quality against cracking and mashing in transportation.

The shape of the Landreths' Crown-picked Globe is longer between the stem and blossom end than the measurement across the fruit; in other words, it is slightly oblong or olive-shaped. The color is a rosy red, with never a split or spot.

The Florida shippers send hundreds of cars of Landreths' Crown-picked Globe to the northern markets—always a quick seller because of its **resistant** quality, consequently every Tomato grower, no matter where located, who ships to a distance can safely tie up to the Landreths' Crown-picked Globe as undoubtedly **profitable** for shippers, because resistant against injury of any kind, as jolting over rough roads, be they railroads or wagon roads.

Too much cannot be said as to the merits of the Landreth Crown Picked Globe, but do not expect the same merits in seed not Landreths'.

June Pink—90 Days

The earliest pink variety on the market. In reality, it is simply a pink form of Earliana and has all the characteristics of Earliana. Fruit solid and borne in profusion.

Ponderosa—115 Days

Foliage large and broad. A monster, fruit purplish-pink, very solid, irregular, crinkled and ovoid,

Landreths' Crown-Picked Globe

flattened at both ends, not entirely free from roughness, very meaty, containing very few seeds. One of the largest Tomatoes grown, by some considered very desirable for slicing.

YELLOW VARIETIES

Golden Queen or Trophy

This is a bright, smooth, well-shaped medium-fruited yellow variety. Very productive, possessing superior flavor to any of the Red sorts. The fruit often shows a slight blush of red when fully ripened, which makes it very attractive in appearance.

Plum-Shaped Yellow

Same as plum-shaped red in every particular except in color.

	Pkt.	Oz.	¼ lb.	Lb.

The Tomato was introduced in the year 1596, but for many years was cultivated only as a curiosity or ornamental fruit for the embellishment of the table. In fact, people were afraid to eat it, as there was a popular impression that it produced cancer, consequently it was eaten only by a few venturesome people.

The first reference to the Tomato in an American Seed Catalogue is found in Landreths' Catalogue of 1820, and the sort then referred to was a yellow Tomato. It was not until after 1840, when six sorts were cultivated, that they became a general article of diet, but all were poor in comparison with present forms.

In 1862 the Fiji, a large, rough, meaty, purple sort, was introduced. It was the forebear of all the purple sorts from which have been bred the Essex, Acme, and Beauty, with all their variations. In 1866 were introduced the improved red sorts, known then as Cooks Favorite, Canada Victor and others, which two years later were greatly improved upon by the Tilden, for which the Landreth establishment paid \$50 for a single fruit.

TURNIP

THESE PRICES
INCLUDE POSTAGE

Three ounces of seed will sow 100 yards of row. Four pounds to the acre. Matures for table in 60 to 90 days, according to variety and season.

Turnip seed may be sown when the Peach is in bloom, or among the first seeds in early Spring; indeed, the only hope of a successful Spring crop is in an early start, as otherwise the period of maturity extends into hot weather, when the bulb becomes fibrous and pungent. Midsummer and early Autumn are the seasons for successful Turnip drilling, though frequently the conditions of the soil then are not so dry as to be favorable to satisfactory germination.

The seed of Cattle Turnips is always drilled in rows, while the early maturing and surface rooted Table Turnip is generally sown broadcast. We advise the sowing, either in drills or broadcast, of not less than three pounds to the acre to insure a satisfactory stand.

The Bloomsdale Swede, like other Ruta-bagas, is slower in growth than the rough-leaved Turnips, but produces roots more solid and more nutritious, less laxative and more fattening. The Ruta-baga is a gross feeder and will do best with 20 to 25 tons of stable manure to the acre, and when it cannot be obtained apply 500 pounds of superphosphate or 200 pounds of nitrate of soda.

WHITE FLESHED SORTS

Cow Horn Green Crowned—90 Days

This variety is a pure White, except a dash of green in the crown. It is a large cropper. Roots sometimes 12 inches long. In shape it is very much like a very long carrot, only it is blunt at the point and very often has a slight crook.

Cow Horn Red Crowned—90 Days

This is identical to the Green Crowned except that the crown is red.

Early Flat Red or Purple Top Strap Leaf—50

This is a very early flat Turnip with a red or purple crown. Used extensively for cattle feeding as well as for the table. Roots flat, about 2 inches in diameter, flesh white. One of the most used Turnips today. Not equal to the Red Top Globe.

Early Flat White Dutch—50 Days

This Turnip is very early and resembles the Early Flat Red or Purple Top in most respects except that the roots or bulbs are all white.

Early Snowball—70 Days

The earliest and most perfectly formed round white Turnip for garden use. A small white globe, very quick in its growth and highly recommended as a Turnip of fine texture.

Jersey Lily—65 Days

Very similar to White Egg, but longer, and not so early; flesh of excellent quality.

Landreth's Southern Snow White Globe—80

Color pure white, shape round, size large, solid, quick in its growth for a large Turnip. Produces a great tonnage to the acre. We recommend this to stock breeders for early feeding, also for sowing at seasons too late to plant Ruta-bagas.

Large Red or Purple Top White Globe—60 Days

This is a large sized, rapid grower, attractive in appearance and admired by all. As its name indicates, it is globular, roots are large, purple or red crown, white underneath. The flesh is white and of fine texture. The roots when about 2½ to 3 inches in diameter, are the best size for edible condition. This is the most popular and most largely used of all the White Fleshed varieties.

Milan Red Top or Crown—40 Days

This and the White Milan are the earliest Turnips in cultivation. Very desirable, in the early stages.

Milan White Top—40 Days

This is identical with the Red Top Milan, except in the color of the top. It is used quite extensively for forcing.

Large Early Red or Purple Top White Globe

TURNIP—Continued

Bloomsdale Swede

Pomeranian White Globe—60 Days

Shape round, size large, solid, pure white, smooth, quick in growth for a large turnip, producing a large weight. Very productive; often 30 to 40 tons to the acre; used extensively for stock feeding, as well as for the table; popular in the South.

White Egg—60 Days

A sort forming oval roots and shaped the size of an egg in an incredibly short period after sowing. Roots are medium size, flesh very white, firm and sweet. Usually about 2 inches in diameter and 3 inches long when fit to eat.

YELLOW FLESHED VARIETIES

Aberdeen or Scotch Yellow—70 Days

This Turnip is highly recommended as a cattle Turnip. Roots yellow with green top, flesh yellow. It is a ranker grower and coarser and later than the Amber Globe which we offer, but we recommend it most highly for dairy purposes.

Amber Globe Green Crowned—70 Days

This we introduced in 1863 and it is almost indispensable in every rural household. It is a vigorous, free grower, valuable for both table and cattle feeding, productive and an excellent keeper. We can say without hesitancy it is the best yellow fleshed Turnip on the market today. Roots are large with green tops and globular shaped. The skin is yellow, except at the top, which is green. The

flesh is light yellow, of fine texture and very sweet, and when cooked, more closely resembles Rutabaga than any other Turnip on the market.

Amber Globe Red Crowned—70 Days

A Bloomsdale selection from the older Green Crowned Amber Globe. The same in every respect to the Green except it has an outside red crown and for this reason it is preferred by some Market Gardeners, as they like its appearance in the basket.

RUTA-BAGA

Bloomsdale Swede—90 Days—Illustrated

The Bloomsdale Swede is quite wonderful in its fine breeding. It is a yellow globular or ovoid shaped Ruta Baga, large size, of the finest texture and flavor, a rich, creamy yellow, with a purple top, and absolutely free of neck—a good keeper. Undoubtedly the best of the Ruta Bagas—many strains of which are not worth the cultivation.

Budlong—90 Days

A white fleshed Ruta-Baga, is stump rooted, fibrous outside; very hardy; a long keeper.

Landreth's Improved Swede—90 Days

A hardy, oval-rooted sort, a heavy cropper. Flesh yellow, with a purple crown, not equal to our strain of Bloomsdale Swede.

Market Gardeners Ruta-baga—90 Days

Similar to Bloomsdale Swede, but not as large in form. Grown very largely by Market Gardeners for table use; also good for cattle.

WINTER TURNIPS FOR GREENS

Dixie Land—50 Days

A form of Turnip for winter greens. Produces large foliage of light blue-green color. An exceedingly good variety. The roots, however, are not good for eating, only the tops being used.

Seven Top—50 Days

This Turnip is used entirely for greens and salad. It may be left standing in the open ground during Winter as far north as Philadelphia. In the Spring in the Southern States it yields an abundant foliage for boiling with cured meat and is in much demand. It is principally cultivated in the Southern States and is a great favorite as greens for stock. It is very hardy.

Southern Prize—50 Days

This is a selection from Seven Top and claimed by some to be superior to the Seven Top. A favorite for forage in certain sections of the South.

LAWN GRASS TEST.—The illustration, from a photograph, is of 20 sorts used in our high-priced Lawn Grass Mixture, the varieties so radiating out from a common centre that the observer standing in the centre may compare all at his feet. Observing which is the best in color—or hardest, which stands the cold or heat the best, or the various merits.

The objects of the application of a **mixture** of Grass Seeds are threefold:

First:—To make more certain the obtaining of a sufficient number of plants—a satisfactory stand—which might not be the case if but one variety were sown, as the conditions affecting the germination of that particular kind of Grass might not be altogether favorable—as soil, climatic condition, date of sowing.

Second:—To be more certain of having some varieties which the geological and physical conditions of the soil will suit, so that the vegetating or developing conditions of some sorts may in almost any case be favorable.

Third:—To have a number of varieties, each possessing successive seasons of vigorous growth, so as always to have a fresh green surface, which would not, to the same extent, be the case if one sort only were used.

The mixtures advertised by different Seed establishments are all made from private prescriptions and vary in selling price from \$16 per 100 pounds (sometimes less) to \$100 per 100 pounds. These mixtures may consist of two distinct sorts or a dozen varieties, the reputation of the Seed House selling them alone being a guarantee of their merit. Certainly the cheaper the price, the simpler and cheaper the mixture must be. Cheapness at once raises a doubt as to the value of the mixture as it is cheapened by the addition of chaff. Do not buy by measure.

Prices are all by the pound, **One Hundred Pounds** being required to seed an acre, which equals a space of 70 yards long by 70 yards wide, making 4900 square yards, or its equivalent, no matter what the shape is. 1 lb. for space of 20 x 20 feet, or 400 square feet.

At single pound rates we prepay postage. At the rate per 100 lbs. or fraction, the seeds will be shipped by Express or Freight at expense of purchaser.
